Carbon Steel Fittings

WELDBEND

- Temp. range: -20° to 650°F

Ideal for use in for use in petrochemical plants, chemical refineries, fertilizer plants and in water, oil, and gas transmission systems. Also suitable for use in thermal power stations, nuclear power plants, and in LNG plants. Fittings meet ASME B16.9.

GRUVLOK ANVIL

Ductile-Iron Grooved Couplings, Flanges, Gaskets, and Lubricants

Couplings and flanges meet applicable requirements of ASME B31.1, B31.9, and NFPA 13. Gasket material properties as designated in accordance with ASTM D2000.

Note: EPDM Gaskets not for use in petroleum applications.

Standard and Rigidlok® Couplings—Flexible, grooved-end pipe joints help reduce noise and vibration transmission. Rigidlok® couplings separate pipe ends and guide the coupling into position as bolts are tightened.

Flanges—Connect Class 125 or Class 150 flanged components to grooved piping systems. Hinged, interlocking halves are drawn together by a latch bolt to ease assembly. Gasket and anti-rotation tines provide a secure, leak-tight seal on both the pipe and mating flange.

Roughneck® Couplings—Innovative gripper action provides a reliable and effective method for joining pipe in manifold piping, mining, oil service, and process piping applications. Not for use on steel pipe with a hardness greater than 150 Brinell, cast-iron, HDPE, plastics, stainless steel, or other brittle pipes. Meets the material requirements of ASTM A536 or A47. UL Listed.

Flange and Roughneck® Gaskets—EPDM Grade E gaskets for use with alkalies, dilute acids, salts, and water. Not for use with gases, hydrocarbons, and oils. NSF certified.

Standard Coupling Gaskets—EPDM Grade EP gaskets are for use with alkalies, dilute acids, salts, and water. Not for use with gases, hydrocarbons, and oils. Nitrile Grade T gaskets are for use with mineral oils, petroleum products, vegetable oils, and air contaminated with petroleum oils. Not for use in hot water applications. NSF Certified.

Silicone Lubricants—Waterproof and remain effective at extreme temperatures. Permit pipe ends to reposition themselves. Nontoxic and not petroleum based.

Ductile-Iron Grooved Fittings and Clamps

- Clamp T fittings: max. pressure is 500 psi, temp. range is -40° to 230°F
- Ductile iron fittings: max. pressure is 1000 psi, except 8" are 800 psi; temp. range is limited by connecting gaskets

Fittings provide a reliable joint that resists external forces without special supports or expansion joints. Clamps attach at any location along the pipe to provide a quick and easy outlet that maintains a leaktight seal under both positive pressure and vacuum conditions. Can be used with water, diluted acids, alkali solutions, oil-free air, and other chemicals. Meet applicable requirements of ASME B31.1, B31.9, and NFPA 13.

Note: Not for use in petroleum applications.

GRUVLOK

Ductile-Iron Grooved Butterfly Valves

- Max. pressure: 300 psi
- Temp. range: -40° to 230°F

Corrosion-resistant stainless steel stems have a secondary seal that provides a lifetime lubrication chamber. With EPDM liner and 4 bolt holes.

Note: Not for use in petroleum applications.

LEVER-OPERATED

Have lever handles; maintain a constant leak-tight stem seal regardless of disc position. Meet MSS SP-67, except Nos. 3DVX7, 3DVY3, and 3DVY4 are UL Listed and FM Approved.

GEAR-OPERATED

With 2 internal switches: 1 is wired for supervisory service; the other is for use as an auxiliary switch. Switches are rated for 11A at 125/150VAC; 0.5A at 125VDC; 0.25A at 250VDC. UL Listed; FM Approved.

Uniflex High-Pressure Steel Pipe Unions—Class 3000

- Max. pressure: 3000 psig CWP; 1500 psi saturated steam

Uniflex unions feature a leak-proof design that won't leak like regular pipe unions. Forged carbon-steel unions have a leaktight gasket, flat-face design, and FNPT connections. Suitable for hot oil, steam, and other process fluids in high-pressure/high-temperature manifold applications. Meet ASTM A105 and MSS SP-83.

Industrial Pipe Fittings

304/L stainless steel resists corrosion, while 316/L stainless steel has more nickel for better corrosion resistance.

F11, F22, and F91 chrome moly are stronger than carbon steel and resist rupturing. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Stainless Steel Threaded Pipe Fittings—Class 150

- Max. pressure: 300 psi WOG; 150 psi saturated steam

304 stainless steel has good corrosion resistance. 316 stainless steel has a higher nickel content for better corrosion resistance. NPT threads. For use with stainless steel Schedule 40 pipe nipples, with air, water, oil, natural gas, and steam. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

316 Stainless Steel Socket Weld Pipe Fittings—Class 150

- Max. pressure: 300 psi WOG; 150 psi steam at 150°F

316 stainless steel has a higher nickel content to provide better corrosion resistance than 304 stainless steel. For plumbing or welding applications with air, water, natural gas, or steam. Materials conform to ASTM-A-351. Dimensions conform to ANSI B16.5. Meet MSS-SP-51 Class 150LB for flange dimensions, pressure, and temperature.

Stainless Steel Socket Weld Flanges—Class 150

- Max. pressure: 275 psi
- Max. steam pressure: 150 psi

Allow easy access to piping systems by bolting 2 flanges together with a gasket to create a tight seal. Similar to slip-on flanges, but a lip supports the pipe while welding. Flanges are counter-bored to accept the pipe before being fillet welded. Flange and pipe bore are the same to enhance flow characteristics. The forged 304L stainless steel construction offers very good corrosion resistance. Flanges are suitable for use with air, water, oil, natural gas, and steam. Meet ASTM-SA182 and ANSI B16.5.

Schedule 40 Stainless Steel Pipe

304 stainless steel resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils. 316 stainless steel offers even better corrosion resistance. NPT threads on both ends. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Schedule 40 Stainless Steel Unthreaded Pipe

304 stainless steel resists corrosion caused by water, heat, saltwater, acids, minerals, and peaty soils. 316 stainless steel offers even better corrosion resistance. For use in natural gas, oil, steam, and water applications. Meet ASTM A-312.

Schedule 40 Welded Stainless Steel Nipples

- Max. pressure: 150 psi CWP at 150°F
- Temp. range: -60° to 450°F
- ⅛" pipe size is seamless construction

For use with Class 150 stainless steel threaded pipe fittings for applications with air, water, oil, natural gas, and steam. NPT threads on both ends. Meet ASTM A733. 304 stainless steel is an economically priced, chromium-nickel material that offers very good corrosion resistance. 316 stainless steel has a higher nickel content and contains molybdenum for even better corrosion resistance.

Schedule 40 Stainless Steel TOE Nipples

- Max. pressure: 300 psi CWP; 150 psi steam at 150°F
- Temp. range: -60° to 450°F

NPT threads on 1 end for easy connection; other end is nonthreaded for welding or brazing. For use with Class 150 stainless steel threaded pipe fittings for applications with air, water, oil, natural gas, and steam. Meet ASTM A733. The 304 stainless steel is a chromium-nickel material that offers very good corrosion resistance. 316 stainless steel has a higher nickel content and molybdenum for better corrosion resistance.

Stainless Steel Threaded Fittings—3000 psi

GA GRAINGER APPROVED

- Max. pressure for fittings, except unions: (304 SS) 2570 psi CWP at 100°F, 1965 psi at 400°F steam; (316 SS) 3000 psi CWP at 100°F, 2810 psi at 350°F
- Max. pressure for unions only: (304 SS) 2915 psi CWP at 100°F, 1905 psi at 400°F steam; (316 SS) 2915 psi CWP at 100°F, 2080 psi at 400°F

304 stainless steel is a chromium nickel material that offers very good corrosion resistance. 316 stainless steel has a higher nickel content, as well as molybdenum, for better corrosion resistance. Use with Schedule 80 stainless steel pipe for applications with air, water, and natural gas. Threads conform to ASME B1.20.1, materials conform to ASTM A182, and dimensions conform to ASME B16.11.

Stainless Steel Flanges and Weldable Outlets—Class 300

For use with Schedule 40 or 80 stainless steel pipe, in applications with air, water, natural gas, and steam.

FLANGES

- Max. pressure: 720 psi
- Steam pressure: 300 psi

Forged flanges have a raised face. Meet ASTM-SA182, ANSI B16.5, except Nos. 4HVL4 to 4HVP1 also meet ASME B1.20.1.

Threaded—Threads conform to ASME B1.20.1 NPT.

Lap Joint—Rotate for easy alignment with bolt holes. No fluid contact. For applications that require frequent dismantling. Not for high-pressure or high-temp. applications.

Socket Weld—Flange is counter-bored to accept pipe before being fillet welded; a lip supports pipe while welding.

Weld Neck—Circumferentially welded into the system at neck to allow easy radiographic weld integrity inspection. Ideal for use in critical applications.

Slip-On—Easy installation in fabricated applications; slip flange over the pipe and fillet weld.

Blind—Sometimes called a blanking flange; use to blank off pipelines, valves, and pumps, or as an inspection cover.

WELDABLE OUTLETS

- Max. pressure: 3000 psi

Use for making side connections to pipe. Forged construction. Meet MSS SP-97.

316 Stainless Steel Instrumentation Pipe Fittings

- Temp. range: -425° to 1200°F

The 316 stainless steel has a higher nickel content, as well as molybdenum for better corrosion resistance. Use with water, steam, natural gas, hydraulic oil, and cryogenic gases. Meet ANSI B31.1, ANSI B31.3, and ANSI B1.20.1, except Nos. 5UNG6 to 5UNJ4 only meet ANSI B31.1.

Sanitary Gaskets

Tri-Clamp®—Gaskets are used to seal clamp connections in sanitary pipe lines. For use in the beverage, biotech, dairy, food, pharmaceutical, and other sanitary process applications. Buna N material does not meet USP Class VI and is not ADI free.

Tri-Clamp® Detectomer® Metal Detectable/X-Ray Inspectable—Allow metal and x-ray detection equipment to instantly locate and reject products contaminated with displaced gasket material.

Bevel Seat—Designed for use in sanitary piping systems in the beverage, dairy, food, and pharmaceutical industries.

Tri-Clamp® Screen—Help eliminate particulates to protect fill and finish sterile products, spray balls, and spray nozzles.

Orifice Plate—Allow flow rate adjustment, backflow balance, and back pressure equalization during sterilizing in place (SIP) procedures.

I-Line and Q-Line—Designed for use in sanitary piping systems in the beverage, dairy, food, and pharmaceutical industries.

Tuf-Flex®—Innovative unitized gasket has high standards for flexibility, performance, and purity. Specifically designed for critical requirements in biotechnology, pharmaceutical, ultrapure water, and WFI (water-for-injection) applications.

Sock Screen—Extended sock-shaped mesh gaskets are inserted into the inside of stainless steel tubing and provide filtration for a greater soil retention. Offer up to 300% more open area for 300% more soil collection capability than conventional screens.

Lead-Free Red Brass Fittings—Class 125

GRAINGER APPROVED

- Max. pressure: 125 psi
- Temp. range: -20° to 400°F

Resist corrosion from water, heat, saltwater, acids, minerals, and heavy soils. Ideal for use with air, water, natural gas, and steam in commercial and residential buildings. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Chrome-Plated Brass Fittings—Class 125

GA GRAINGER APPROVED

- Max. pressure: 125 psi
- Temp. range: 60° to 250°F

Generally used in hospitals, schools, commercial bathroom installations, and other plumbing applications where yellow brass cannot be used. NPT connections. Meet ANSI B16.24 and ANSI B16.15.

Schedule 40 Chrome-Plated Brass Nipples

- Max. pressure: 125 psi
- Temp. range: 60° to 250°F

Lead-free brass construction and feature a high-gloss, chrome-plated finish that's easier to clean than regular brass. Nipples have high corrosion resistance and are easier to work with than steel fittings. MNPT connections. Suitable for use in potable water applications. Meet ANSI B16.24 and ANSI B16.15.

Brass Fittings—Class 250

- Max. pressure: 400 psi at 72°F; 250 psi at 400°F steam
- Temp. range: 0° to 400°F

Class 250 fittings have thicker walls to handle higher pressures. For use in air, water, oil, natural gas, and steam applications. Meet ASME B.16.15 and B1.20.1.

GA GRAINGER APPROVED

Schedule 80 Red Brass Threaded Nipples and Pipe

- Max. pressure: 250 psi
- Temp. range: -20° to 400°F

Resist saltwater, heat, acids, minerals, and soils. MNPT connections. For use in water, oil, natural gas, and steam applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Brass Pipe Fittings and Nipples

GA GRAINGER APPROVED Parker

- Temp. range: -65° to 250°F

Nipples are built with MNPT connections. For use in water, oil, natural gas, and steam applications.

GA

- Max. pressure: 1200 psi

Meet SAE, ASME, and ASA.

PARKER

- Parker fittings are made in the U.S.
- Manufactured to Dryseal Standards
- Max. pressure: 1000 psi

Feature high-impact strength and resist mechanical shock and vibration. Can be used with brass, copper, and iron tubing. For use in aggressive and general industrial environments and are compatible with many fluids. Parker male threads include Loctite® Vibra-Seal® thread sealant. All fittings meet SAE J530 and J531.

Lead-Free Brass Fittings and Nipples

GRAINGER APPROVED

- Max. pressure: 1200 psi
- Temp. range: -65° to 250°F

Ideal for use in plumbing and industrial applications where lead-free fittings are required. Certified for use in potable water applications and are NSF-61 Annex G Listed.

Brass Pipe Fitting Kits

GA GRAINGER APPROVED

- Max. pressure: 1200 psi
- Temp. range: -65° to 250°F

Meet SAE, ASME, and ASA.

Description	Sizes Incl.	Item No.
42-Pc. Kit	(3 Each) ⅜" and ½" Hex Nipples, Female Tees, Couplings, Street Elbows, Close Nipples, and Hex Plugs, ½" x ⅜" Bushings, ½ x ⅜" Reducers	6AZF8
70-Pc. Kit	(5) ¼" Hex Nipples, Female Tees, Couplings, Street Elbows, Close Nipples, Hex Plugs, 45 Degree Straight Elbows, ¼ x ⅛" Reducers, ¼ x ⅛" Couplings, ¼ x ⅛" Hex Nipples, ¼ x ⅛" Bushings, ⅜ x ¼" Bushings, ½ x ⅜" Bushings	6AZF6
111-Pc. Kit	(10 Each) ⅜" and ½" Hex Nipples, Close Nipples, and Hex Plugs (3 Each) ⅜" and ½" Female Tees, (5 Each) ⅜" and ½" Street Elbows, (10) ⅜" Couplings, (5) ½" Couplings, (10 Each) ½ x ⅜" Bushings and Reducers	6AZF9
140-Pc. Kit	(10) ¼" Hex Nipples, Female Tees, Couplings, Street Elbows, Close Nipples, Hex Plugs, 45° Straight Elbows, ¼ x ⅛" Reducers, ¼ x ⅛" Couplings, ¼ x ⅛" Hex Nipples, ¼ x ⅛" Bushings, ⅜ x ¼" Bushings, ½ x ⅜" Bushings	6AZF7

No. 6AZF6

Brass Instrumentation-Grade Fittings

Parker

Machined to an exceptional tolerance level, with rolled threads for increased strength. For instrument air, gas, and liquid service. Meet ANSI B31.1, B31.3, and B1.20.1.

Cast Copper and Bronze Fittings

NIBCO GA GRAINGER APPROVED

- Temp. range: -20° to 400°F, except Nos. 1WLH5 to 1WJL1 are 0° to 400°F and No. 36N483 is 40° to 100°F

Feature higher pressure ratings than most wrot copper fittings. GA models are compatible with wrot copper fittings. All models are for use in nondrinking water and air applications. Meet ANSI B16.18, except Nos. 36N483 to 36N559 meet ASME B16.26.

Copper Press Tools and PEX Press Jaws

RIDGID

Use to securely join Type K, L, or M copper tubing, with no flames, solder, or flux. Designed for ½" to 4" applications, with interchangeable jaws and rings. For use with potable and chilled water, hydronic heating, compressed air, and air vacuum (29.2" Hg max. at 68°F).

Compact Cordless Pressing Tool Kits—Compact and lightweight for tight spaces and overhead work, these press tools feature Bluetooth® connectivity to manage information such as battery life and cycle count. The handy LED light is ideal for low light conditions and the battery can provide up to 140 crimps per charge. The included carrying case eases transport to and from the jobsite.

Cordless Pressing Tool Kit—Portable tool has a rotating barrel that swivels 270° for reaching tight spaces. Lightweight kit includes press tool, 2 batteries, charger, and case.

Pressing Tool Kit—Alerts user when recalibration is needed, and a shutoff switch disables the tool if jaw pin is not locked into place. Rotating barrel swivels 270° to help reach into tight spaces. Includes ½", ¾", 1", 1¼", 1½" and 2" jaws and carrying case.

Pressing Ring Kits—Use with battery-powered or corded pressing tools to connect copper tubing in tight spaces; a swivel actuator allows the tool to be oriented ±90° to the tubing.

Viega® MegaPress™ Jaws Kits—Nos. 34TC11 and 34TC10 include ½" to 1" press jaws and a carrying case, No. 34TC10 adds 1¼ " to 2" press rings and actuator.

Compact Cordless Pressing Tool, Short Throw—Lightweight and low-profile tool is ideal for working in tight and hard-to-reach spaces. Model allows one-handed operation that leaves your second hand free to support and guide the connection. Handy LED light allows use in low light conditions.

Press Tool Accessories—Press Tool Pipe Cutter Attachment No. 5KAY4 eases cutting of cast-iron soil pipe. Simply connect unit to press tool, wrap chain around the pipe, and press. No ratcheting or additional tools required. Compatible with all Ridgid standard press tools.

PEX Press Jaws—Designed for use with Viega® system fittings. Compact jaws are ⅓ smaller than Standard models and are for use in tight spaces.

Copper Viega ProPress® Fittings

- Max. pressure: 200 psi; tested to 600 psi
- Temp. range: 0° to 250°F

ProPress® offers a quick, flameless, environmentally friendly way to join standard K, L, or M copper tubing with Viega Smart Connect® feature, and to identify unpressed fittings. No flux, solder, or gas required. Use with copper press tools, sold separately on page 2800. For compliance and standards information, go to Grainger.com®.

Viega MegaPress® Stainless Steel Fittings

viega

- Max. pressure: 200 psi
- Temp. range: 0° to 250°F

Provide clean, flameless connections that can withstand high temperatures, pressures, and corrosive cleaning materials. System allows you to make secure, consistent connections without diminishing the pipe wall by threading. Suitable for use from potable water in commercial projects to corrosive chemicals in industrial applications. Meet ASTM A312/A403, IAPMO, ICC, NSF/ANSI 372, and TSSA/ASME B31.1/B31.3/B31.9.

Viega MegaPress®G Carbon Steel Press Fittings

viega

- Max. pressure: 125 psi
- Temp. range: -40° to 180°F

Install fittings without completely shutting down the system and reduce installation time by up to 60% with no threading or cutting oils. Fittings include the Viega Smart Connect® feature and a durable hydrogenated nitrile butadiene rubber (HNBR) seal that resists chemicals, heat, and oil. Can be installed with ASTM A53 Schedule 5 to Schedule 40 black iron pipe. Suitable for use in compressed air, and in fuel oil and natural gas applications. Meet ANSI LC4/CSA 6.32, IAPMO, ICC, IFGC, NFPA 54 and 58.

Viega MegaPress® Carbon Steel Fittings

viega

- Max. pressure: 200 psi
- Temp. range: 0° to 250°F

Can reduce installation time up to 60% compared to welded connections. Fittings use cold press technology with no risk of smoke/fire, and connections are not contaminated with thread cutting oil or metal filings. Ideal for black, painted, and powder-coated pipe (seamless and welded). Have a durable corrosion-resistant, zinc-nickel coating and are ideal for repair or expansion of steel pipe installations. Meet FM, IAPMO, ICC, NFPA 13, 13D and 13R, TSSA/ASME B31.1/B31.3/B31.9, and UL Listed.

Lead-Free PEX Crimp Fittings

- Max. pressure: 80 psi, except PEX Ball Valves are 160 psi at 73°F, 100 psi at 180°F, and 80 psi at 200°F
- Temp. range: 33° to 200°F
- Fittings are Zurn brand, except Nos. 40PR09, 40PR11, and 40PR12 are Oetiker brand

Easily install without flame, flux, or solder. Require no bonding agents, glue, or solvents. Fittings resist corrosion, mineral buildup, rust, and freeze damage. Suitable for new or retrofit construction and for hot or cold water distribution. Clamps Nos. 40PR09, 40PR11, and 40PR12 feature a narrow band for more concentrated compression and have a tamper-detectable design. Nos. 40PR09 and 40PR12 hold in place while crimped to ease installation. Fittings are certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Manual PEX Tools and PEX Manifolds

MANUAL PEX TOOLS

Nos. 10A618 and 10A619 apply the correct pressure to create a leak-free crimp connection. Use with annealed copper crimp rings, Qick/Sert1® or QickSert CR™ fittings, and Zurn PEX tubing.

No. 10A622 is used to make a copper crimp ring connection. For use with 1¼", 1½", and 2" Zurn PEX copper crimp rings on Zurn PEX DZR and Zurn PEX XL insert fittings.

Nos. 40PR13 and 40PR14 used with ear clamps will not release until the clamp is fully closed to help ensure a leak-free connection. Nos. 52DD79 to 52DD83 meet ASTM F1807.

QUICK PORT MANIFOLDS

- Max. working pressure: 100 psi
- Temp. range: 33° to 200°F

Use to supply different fixtures from a main line and feature controllable water distribution, increased water flow, and no inline below-floor fittings. Certified for use in potable water applications. Meet ASTM F877 F1807.

Lead-Free Push-Fit DZR Brass Fittings

- Max. pressure: 200 psi
- Max. temp.: 200°F, except No. 19F918 is 150°F, Nos. 49EL56 and 49EL58 are 250°F

Push-fit connection requires no clamps, glue, soldering, tools, or unions to help ease installation. Use with hydronic heating and potable water; approved for underground and behind-wall systems without access panels. For residential and commercial whole-house installations, water heater repairs, and sillcock or water filter replacement. Certified for use in potable water applications.

Push-Fit Accessories

Allow you to easily install and disassemble SharkBite® fittings and valves without the need for glue, solder, or clamping. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

DISCONNECT CLIPS AND DISCONNECT TONGS

High-density plastic clips and stainless steel tongs for removal and installation of SharkBite fittings and valves.

PEX STIFFENERS

Help to stiffen PEX tubing for an easier push-fit connection.

DEBURRING TOOL

Use to smooth the rough edges on cut pipe and can also be used to mark pipes for accurate installation.

26-PC. PUSH FIT KIT

Comes with commonly used push-fit fittings and tools. See the full list of kit contents on Grainger.com®.

Lead-Free Instant Push-Fit Brass Ball Valves

SharkBite

- Max. pressure: 200 psi CWP
- Max. temp.: 200°F

Easy-to-install connection requires no clamps, glue, soldering, tools, or unions. Lead-free brass stem and ball, and EPDM seals. Certified for use in potable water applications. Meet cUPC®, UPC®, IAMPO, and IPC; except No. 49EL59 meets ASSE 1061 and is NSF 61 Certified.

Lead-Free Compression and Push-Fit Brass Supply Stops

- Max. pressure: 200 psi
- Temp. range: 40° to 180°F, except Connectors are 0° to 200°F, and Tee Stop Valves are 32° to 200°F

Require no clamps, glue, or soldering; can be rotated after assembly to ease installation in tight spaces. Easy to disconnect. Use with flexible service lines and fixtures such as dishwashers, faucets, icemakers, toilets, etc. Certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

CTS Twist-and-Lock Fittings

JG Super Speedfit®

- Max. pressure: 160 psi
- Max. temp.: 200°F

Create a leakproof connection with copper, CPVC, and PEX tubing. Toolless installation is good in tight spaces. Suitable for cold and hot water distribution, potable water distribution, and hydronic heating systems. Meet ASSE 1061, 1GC 188; ASTM F876, F877; ICC; NSF/ANSI 14; UPC®; and are CSA B137-5 Certified.

Sewer and Drain Thin Wall PVC Drain and Waste Fittings

Genova PRODUCTS

- For cold water drainage only

Ideal for outdoor or buried installations. 3" fittings meet ASTM D2729 and D2949, except No. 20LU75 meets ASTM D3034 and No. 20LU80 meets D2852. 4" and 6" fittings meet ASTM D3034, except No. 20LU77 meets ASTM D2665. Reducing fittings meet ASTM D2852, except Nos. 20LU42 and 20LU74 meet ASTM D2729 and D2949.

PVC Schedule 40 Clear Pipe and Fittings

GA GRAINGER APPROVED

- Max. temp.: 140°F

Transparent material allows visual monitoring of liquid flow and color. For use with PVC-compatible cleaners, primers, and solvent cements.

PIPE

Can also serve as a secondary containment system (pipe-in-pipe).

FITTINGS

Meet ASTM D.1784, NS14-14, FDA Regulations 175.300, 178.2650, 178.3790. NSF 61 Rated.

CPVC CTS Fittings and Pipe

GRAINGER APPROVED SPEARS Genova PRODUCTS

Material resists mineral buildup for long life. Suitable for use in potable hot and cold water distribution, and designed to help prevent energy loss. FlowGuard Gold® pipe adds up to 80% greater resistance to impact fracture compared to regular CPVC pipe. It won't corrode, pit, or scale and is immune to chlorine degradation. Can be used in condensate drains and under slab plumbing. All fittings and pipe are easy to connect using CPVC primer and solvent cement sold on page 2819. For certifications go to Grainger.com®.

PVC Insert Fittings

LASCO® Fittings, Inc.

- Max. temp.: 140°F

Ideal for use in irrigation, pools, pumps, spas, wells, and other outdoor cold water applications. Fittings insert into flexible polyethylene pipe and secure with worm drive clamp (sold separately on page 2532). For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Corrugated Drain Pipe and Fittings

Corrugated Drainage Pipe—This angular drain pipe is heavy-duty construction and ideal for most drainage applications including use in foundation/edge, downspout, culvert, and sub-drainage applications. Bend-a-Drain™ pipe Nos. 49ET04, 49ET07, 49ET05, and 45FM97 lets you expand the pipe lengthwise and adjust it into the desired angular position. Suitable for use in above and below ground downspout drainage, low spot drainage, and in french drain applications.

Concrete and Pipe Fittings—Inserta Tee® compression-style fittings are a 3-pc. connection system consisting of a stainless steel band, rubber sleeve, and PVC hub. System allows you to connect into the cored wall of a mainline and requires no adhesive or special tools for installation.

Hole Saws for Corrugated Pipe—Allow you to core fast, clean, and smooth holes. Cutting teeth are rugged, high-speed steel for long life.

Solid Drain Pipe Fittings—Rugged, single wall polyethylene construction. Drain End Caps Nos. 45FN23, 45FN03, and 45FN29 are for use in horizontal applications. Not for use in any vertical applications.

Schedule 80 PVC Pipe and Fittings

- Max. pressure: 246 psi
- Max. temp.: 140°F

Nontoxic, lightweight fittings resist corrosion, chemicals, and rust. Feature a higher pressure rating than Schedule 40 fittings and are suitable for use in cold potable water applications. Compatible with PVC primer and solvent cement sold on page 2819. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

GA GRAINGER APPROVED +GF+

WARNING: Thermoplastic piping products should not be used for systems to transport or store compressed air or gases, nor should these products be tested with air or gases in above- or below-ground locations.

Schedule 80 CPVC Pipe and Fittings

GA GRAINGER APPROVED +GF+

- Max. pressure: 246 psi
- Max. temp.: 210°F; Nos. 3TNW6 to 3TNX7, 3TPV1, and 3TPV2 are 200°F

These nontoxic, lightweight fittings resist corrosion, chemicals, and rust. Chlorine is added to allow higher temperatures than PVC, and the CPVC material has broader chemical resistance. Suitable for hot water and corrosive liquids. Use with CPVC primer and solvent cement sold on page 2819. Meet ASTM D1784 and NSF-14 compliant, except Nos. 22JZ30 to 22JZ69 are NSF only.

WARNING: Thermoplastic piping products should not be used for systems to transport or store compressed air or gases, nor should these products be tested with air or gases in above- or below-ground locations.

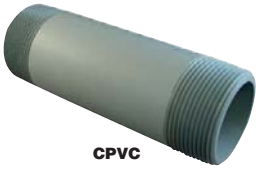
+GF+ SPEARS

Schedule 80 PVC and CPVC Pipe Nipples

- Max. pressure: 420 psi at 73°F

These nontoxic, lightweight gray nipples resist corrosion, chemicals, and rust. For PVC primer and solvent cement, see page 2819. Meet ASTM and NSF compliant, except Nos. 22JZ85 to 22JZ89 are NSF only.

WARNING: Thermoplastic piping products should not be used for systems to transport or store compressed air or gases, nor should these products be tested with air or gases in above or below ground locations.



Note: All items are GF brand unless indicated otherwise in table.

PVC—Have higher pressure rating than schedule 40 fittings. For cold potable water applications.
- Max. temp.: 140°F

CPVC—Chlorine is added to allow for higher temperatures than PVC. For hot water and corrosive liquids.
- Max. temp.: 210°F

BANJO Liquid Handling Products

Schedule 80 Polypropylene Pipe Fittings

- Max. pressure: 150 psi at 70°F
- Temp. range: -20° to 150°F

Impact-resistant, glass-reinforced polypropylene has excellent chemical resistance. Can be used in fertilizer, herbicide, and insecticide handling applications, as well as for industrial applications, such as waste, saltwater, and cooling water handling.

Chemtrol

Kynar® Pipe Fittings and Valves

- Temp. range: 73° to 280°F, except Nos. 38AP77 to 38AP83 have a max. temp of 210°F

Resist salts, strong acids, dilute bases, and organic solvents. Use with PVDF pipe that conforms to ASTM D3222, Type 1, Grade 2. Meet ASTM D3222, except Nos. 38AP77 to 38AP83 meet ASTM F1970, NSF/ANSI 14 and 61, Annex G.

TRUE UNION VALVES

Can be removed without disrupting connected piping.

TRU-BLOC® BALL VALVES

Provide minimum flow restriction with lowest possible pressure drop.

HAYWARD

CPVC, PVC, and Polypropylene Bulkhead Tank Fittings

- Max. pressure: 150 psi

Use as an inlet or outlet for valves, pipes, tanks, and totes. Each fitting consists of a body, gasket, and locking nut with wrench flats. Features left hand threads to ease installation and is available in short and long pattern designs.

CPVC

- Temp. range: 40° to 190°F

PVC

- Temp. range: 40° to 140°F

POLYPROPYLENE

- Temp. range: 40° to 180°F

Polypropylene and Stainless Steel Bulkhead Tank Fittings

BANJO Liquid Handling Products

- Max. pressure: 150 psi
- Temp. range: -20° to 150°F

Use as an inlet or outlet for faucets, pipes, and spigots. Each fitting consists of a body, gasket, and locking nut with wrench flats. Can be mounted in walls, tanks, or panels. EPDM gaskets. FNPT connections.

Compression Couplings and Repair Couplings

Designed for temporary repair of new or existing pipelines. Include metal friction rings, iron nuts, and Buna N rubber gaskets.

GALVANIZED STEEL
- Pressure rating: 125 psi
- Max. temp.: 210°F
- IPS slip connections

PVC COUPLINGS (COLD WATER)
- Pressure rating: 160 psi at 73°F
- For cold water only

CPVC (HOT WATER)
- Max. pressure: 100 psi at 80°F

LOW-LEAD BRASS
- Pressure rating: 125 psi
- Max. temp.: 210°F
- Compression connections

Certified for use in potable water applications.

Single-Strap FNPT Outlet No. 3ETZ3

Smith-Blair

Double-Bale and Single-Strap Saddle Clamps

- Max. pressure: 300 psi
- Max. temp.: 180°F

Use to tap into and tee off of existing pipes; fully entrapped gaskets hold tee tightly in place in the tapped cavity. Wide band spread prevents pipe damage when tightening. Ductile iron body with stainless steel straps. Meet ASTM-A536 and AWWA C800; NSF61 Certified.

Solvent Cements and Cleaners

Application temp.: 32° to 110°F, (pipe cleaners and purple primers are -10° to 110°F). All meet max. VOC limits SCAQMD method 1168-316A or BAAQMD method 40. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

WARNING: These cements and cleaners are extremely flammable; handle and use them in accordance with manufacturer's instructions.

ROOT-BAN™ DRAIN PIPE ADHESIVE

Bonds pipe connections with a strong, flexible, and leakproof seal that inhibits root intrusion. For use on HDPE, polyethylene, polypropylene, and styrene drain pipe up to 6" dia. Not for use on pressurized piping systems.

SOLVENT CEMENT, RED HOT BLUE GLUE®

Nos. 45RF96 to 45RF98 are a fast-setting, pipe cement for flexible and rigid PVC plastic pipe and fittings in potable water, conduit, drain duct, DWV, and sewer in both pressure or non-pressure applications. Suitable for use in dry, humid, or wet conditions.

738™ HOT 'N FAST, NOS. 3NZW7 AND 3NZW8

For use in wet and dry conditions when quick pressurization is desired.

P-70™ PRIMER, NOS. 6KWU4, 6KWU5, AND 6KWU6

Premium industrial-strength primer for use on Schedule 80 and larger pipe sizes. Excellent in cold weather applications.

Sealant, Pipe Dope, and Plumber's Putty

Note: POLY-TEMP® and SLICKON® are registered trademarks of Anti-Seize Technology.

Gasket Sealant—Forms a flexible seal which will not harden, crack, crumble, or shrink.

Leak Detector—For use on pressurized plumbing and gas lines.

Megaloc® Thread Sealant—Will not harden, crack or become brittle; requires no cure time. Max. pressure: 12,000 psi (liquid).

AST-PPD™ Plumber's Pipe Dope—Nontoxic, no lead or silicone. Use with all metal pipe and valves. Max. pressure: 1000 psi (gas); 2000 psi (liquid).

No. 4X222

Pipe Thread Sealant (Hercules)—Won't harden or separate. Nonflammable and requires no cure time. Max pressure: 12,000 psi (liquid).

SLICKON® GTS GOLD™ Sealant w/PTFE—Nontoxic, noncuring, solvent-free paste is suitable for use with potable water. FBC™ System compatible.

SOF-SET™ Pipe Sealant—Use on metal, PVC, and ABS pipe for water, steam, LP and natural gas, refrigerants, ammonia, fuel oils, and hydraulic oil. Max. pressure: 10,000 psi (liquid); 2600 psi (gas).

TFE™ Pipe Thread Sealant w/PTFE—Meets FDA requirements. NSF registered and UL Classified for fire protection sprinkler systems. Max. pressure: 10,000 psi (liquid); 2000 psi (gas).

TUF-SET™ Pipe Thread Sealant—Sets firm; resists vibration, shock, and thermal expansion; allows disassembly. Nontoxic and corrosion-resistant. Use with potable water, all common refrigerants, natural gas, propane, and gasoline. Max. pressure: 10,000 psi (liquid); 2600 psi (gas).

AST-PUT™ Plumber's Putty—Mold and mildew resistant. Meets Fed. Spec. TT-P-1536A.

Pro Dope® Thread Sealant—For use with air, brine, diluted acids, gas, hydronic heating, natural gas, steam, and sprinkler systems. Max pressure: 250 psi (liquid).

Pipe Thread Sealant Tapes and Valve Stem Packing

No. 3AB55

For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Low-Density Thread Sealant Tape—Virgin PTFE, compatible with most pipe materials, and forms a permanent seal for the life of the connection.

POLY-TEMP® Antiseize Thread Seal Tape—Eases assembly/disassembly of threaded fasteners, connections, and helps prevent seizing and galling. Nos. 2TE46 and 2TE47 are non-toxic and for use in food handling applications.

POLY-TEMP® Gas Line Sealant Tape—Extra-dense thread sealant for use on most metal or plastic pipe connections.

POLY-TEMP® Thread Sealant Tape—No. 2TE52 is for use in sealing and preventing seizing in stainless steel and stainless steel alloy pipe threads.

POLY-TEMP® VSP Valve Stem Packing—Inert to most chemicals and withstands vibration and severe corrosion. Can conform to worn stuffing boxes and valve stems. Max. pressure: 500 psi.

Pow-R™ Pipe Repair Products

- Nos. 2KUT3 to 2KUT5 are EPA-approved for use on drinking water lines
- Gray color

Hand-workable epoxy cures as hard as steel to create permanent, industrial-strength repairs. Simply apply putty, soak wrap, wrap pipe, and tighten for about 15 min. Holds tight, even under water. Kits include gloves and instructions. For use on fluid-bearing pipes made from copper, plastics, PVC, rubber, fiberglass, galvanized, concrete, and more.

Description	Size	Full Cure	Line Pressure	Performance Temp. Range	Item No.
Pow-R Wrap™ Pipe Repair System					
For Pipe Up to 1" Dia.	2" x 4 ft.	30 min.	600 psi	Up to 425°F	2KUT3
For Pipe 1¼ to 3" Dia.	3" x 11 ft.	30 min.	600 psi	Up to 425°F	2KUT4
For Pipe 3 to 6" Dia.	4" x 21 ft.	30 min.	600 psi	Up to 425°F	2KUT5
Pow-R Pack® Universal Plumbing, Pipe and Hose Repair Kit					
For Pipe Up to 1" Dia.	2" x 4 ft. Wrap, 4" x 6" Patch	1 hr.	600 psi (Wrap),100 psi (Patch)	Up to 425°F	3HCY4

FiberFix™ now you can fix anything

No. 36VT52

FiberFix™ Fiberglass Repair Wrap

- For indoor or outdoor use

High-strength fibers and an innovative resin for quick and easy repairs. Just activate the material in water, then wrap it tightly around the broken object. Repair Wrap Nos. 36VT52 to 36VT54 and 429J31 help seal water leaks in hoses or small pipes. Heat Wrap No. 36VT55 can repair leaks in hot water pipes. Repair Wrap No. 429J31 and Pipe Repair Kit No. 445L01 can cure as strong as steel in just 5 min. For a list of the accessories included with each kit, go to Grainger.com® and search for the Item number.

No. 36VT55

Description	Size	Full Cure	Line Pressure	Performance Temp. Range	Color	Item No.

Pneumatic Test Plugs

Note: Always block plugs when conducting air tests. Consult manufacturers' safety instructions before installing product.

Cherne® Big Mouth® Flow-Through Plugs—Feature an interchangeable bypass flange that allows the same plug to be used for different applications. Removable tire valve allows for easy replacement.

Cherne® Muni Ball Plug, No. 53MH31—Has a full bypass so that you can both test and monitor your piping system. Ideal for use in the installation and repair of commercial or residential piping applications, including sanitary and storm sewer pipe systems.

Cherne® Test Ball Plug, No. 53MH28—Model features Rupture Disc design that helps prevent over inflation of the pneumatic plug. For pressure testing and blocking of residential drain, waste, and vent (DWV) systems during installation and repair of municipal infrastructure including storm and sanitary sewer piping systems.

Clevis Hangers

Recommended for suspending stationary, noninsulated pipelines.

LIGHT-DUTY

Carbon Steel-Copper Finished (for Copper Pipe)
Comply with Federal Specifications WW-H-171 (Type 12).

Carbon Steel-Zinc Finish
- Max. temp.: 450°F

For steel pipe but better for corrosive environments. Comply with Federal Specification WW-H-171E (Type 12).

Carbon Steel-Plain Finish
- Max. temp.: 650°F

Meet Federal Specifications WW-H-171 (Type 12).

HEAVY-DUTY

Carbon Steel (for Wastewater Pipe)
- Max. temp.: 650°F

Suitable for wastewater applications and where ductile iron or cast-iron pipe is used. Comply with Federal Specifications A-A-1192 (Type 1). WW-H-171-E (Type 1), and MSS-SP-69 (Type 1).

Carbon Steel - Plain Finish
- Max. temp.: 650°F

For steel pipe. Meet A-A-1192A (Type 1), WW-H-171-E (Type 1), ANSI/MSS SP-69, and MSS SP-58 (Type 1).

Carbon Steel-Zinc Finish
- Max. temp.: 450°F

304 Stainless Steel
Meet Federal Specification WW-H-171 (Type 1), MSS SP-58 and SP-69 (Type 1).

Steel Pipe Hangers and Stud Guards

Durable powder-coated finish allows use in indoor or outdoor applications.

Pipe Hanger—Innovative design can hold and secure cast-iron, copper, and PVC pipe. Easy-to-install hanger can be reused if the pipe location needs to be changed. 16-ga. construction, except Nos. 53MH45 to 53MH50 are 18 ga., and 49XK94 to 49XK96 are 10 ga.

Stud Guard—Designed to help protect wiring and pipes from nails or screws. 16-ga. spring steel construction.

Loop Hangers

Recommended for suspension of stationary noninsulated pipelines. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

304 Stainless Steel—Hex nut (not included) is recommended for use with hanger.

Carbon Steel-Copper Plated—Copper colored for ID purposes. Swivel, adjustable band.

Electro-Galvanized Steel, J-Style—Can be suspended by hanger rod or attached to wall.

Carbon Steel-Zinc Plated Finish—Can be suspended by hanger rod or attached to wall. T-slot in hanger permits side bolt to be installed after pipe installation and setting.

Swivel, Adjustable Band with NFPA Rod Sizes—Manufactured to use the minimum rod size permitted by NFPA for fire sprinkler piping. Electro-galvanized steel. Swivel, adjustable band.

Carbon Steel-Zinc Plated Finish—A retained insert nut helps keep the loop hanger and insert nut together. Swivel, heavy-duty adjustable band. ½" to 2" have rounded edge for use with CPVC.

J-Style, Felt Lined—Help prevent electrolysis when used with copper tubing lines. Felt lining reduces noise in pipes. Electro-galvanized steel.

Cush-A-Clamp® Strut Clamps

- Temp. range: -50° to 275°F

Clamps absorb shock and vibration; reduce unwanted noise and galvanic corrosion in multiple-line runs. Thermoplastic cushion resists most oils, chemicals, and industrial cleaning compounds. Sizes up to 1⅜" have Controlled Squeeze™ design, which eliminates over-tightening and rotation.

Superfix Cushioned Pipe Clamps

- Temp. range: -58° to 230°F

Use for suspending stationary noninsulated steel and copper pipelines. Innovative hinged design eliminates the need to disassemble the clamp prior to installation. EPDM rubber sleeve provides an average of 20dBA noise reduction. Welded ⅜" cap nut allows easy attachment to threaded rod. Corrosion-resistant electro-galvanized steel construction. Conform with Manufacturers Standardization Society (MSS) SP-58 And SP-69 (Type 12), Fire Rating according to DIN to EN13501-1:E.

ZSi

Cush-A-Nator® Cushioned Clamps

- Temp. range: -50° to 275°F (Standard)
- Temp. range: -65° to 340°F (High Temp.)

Rugged steel clamps have a durable thermoplastic rubber cushion that resists high heat and provides long life against vibration fatigue. Cushion is self-aligning and has a built-in squeeze control to help provide evenly distributed pressure around the pipe or tube for a secure fit. Clamps include hardware and come with a standard or high temp. elastomer cushion. Meet MSS SP-58 and MSS SP-69 (Type 58).

Riser Clamps

Use for suspending vertical steel pipe or copper tube risers. Slotted holes ease assembly. Bolts are accessible from the front; serrated washer head design means no wrench required on back side for tightening. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

Note: Copper-plated steel pipe size refers to nominal tube size for copper tubing. Clamp is fitted for steel pipe or copper tube and should be installed below a coupling or shear lug, with bolts torqued to recommended value.

AWWA Pipe Couplings

No. 5ENH2

- Max. pressure: 250 psi
- Temp. range: -20° to 180°F
- Nitrile gasket
- Vacuum rating: 28" Hg

Can join pipes with up to 1.65" of pipe differential using a single flange and gasket. Couplings are heavy cast ductile iron and epoxy coated to resist corrosion. ⅝" bolts. Meet AWWA C219, ANSI A21.11, NSF 61, ASTM A-536, ASTM 633-78.

Pipe Size - Pipe Fitting	No. of Bolts	Fitting Length	Item No.

Smith-Blair A SENSUS COMPANY

Ductile-Iron Couplings

No. 4NWX2

- Temp. range: -20° to 180°F

Join pipe with no special preparation required. Allow limited pipe expansion and contraction; also dampen vibration. Meet ASTM A307, ASTM A536, NSF 61, and ASTM A53C.

Pipe Size - Pipe Fitting	Fitting Length 4½" Item No.	5" Item No.	7" Item No.	12" Item No.

Grip and Wrap-Around Pipe Couplings

Grip-L Open-Flex

- Max. pressure: 232 psi
- Temp. range: -4° to 212°F, except Nos. 452Y10 to 452Y20 are -4° to 180°F
- Vacuum rating: 28" Hg

Join plain-end pipes without special preparation or special tools, and create a leaktight seal. Reusable couplings dampen vibration and handle pipe misalignment. Meet ASTM 1476, TY2, CL2, CL3.

GRIP-L

Couplings create a pull-out resistant seal. Couplings and bolts are 316 stainless steel.

OPEN-FLEX

304SS casing with split gasket design allows coupling to be installed without pipe disassembly. Not pull-out resistant. Couplings are 304 stainless steel, bolts are galvanized steel.

Pipe Straps

No. 1CWC8

ELECTRO-GALVANIZED STEEL, 1-HOLE/2-HOLE

Recommended for supporting horizontal runs of piping from the face of a structural member. Fastening hole in strap may be above or below pipe.

No. 4KJV8

GALVANIZED STEEL, 2-HOLE

Use to secure CPVC pipe in a horizontal position on the bottom of structural wood beams, or on steel with hanger tab in the upward position. Can also be used as a guide to limit movement of a vertical CPVC pipe with tab in the vertical position.

No. 5P128

HEAVY-DUTY AND COPPER, 2-HOLE

Help secure tubing to walls, studs, etc. and help form a rigid system. ½" to 2" straps are 10 ga.; 2½" to 4" straps are 3 ga. Zinc-plated finish is more corrosion resistant than plain steel; 304 stainless provides better corrosion resistance than zinc-plated. Copper straps sold 5 per pack, all others sold each.

Hanger Plates and Brackets

For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

CEILING OR WALL PLATES

Structural attachments to support hanger rod from a ceiling or wall.

EYE SOCKET ROD HANGER

Structural attachment used to join hanger rod to a structure.

HINGE ROD HANGER PLATE

Hinge type hanger plates are suitable for attachment to ceiling or wood beams.

IRON SIDE BEAM BRACKET

Use for attaching pipe or conduit to steel or wooden beams.

OFFSET EYE SOCKET ROD HANGER

Structural attachments join hanger rods to a structure with full vertical rod adjustment.

SIDE BEAM ROD HANGER

Prethreaded structural attachment fastened to wall or the side of a joist to support hanger rod. Two #43 wood drive screws are necessary for proper support.

Note: Follow fastener manufacturer's recommended shear and pull-out strength when fastening to the structure.

Beam Clamps

Note: Setscrews must be tightened and torqued onto the sloped side of the I-beam.

UNIVERSAL

Structural attachment for top or bottom of metal beams, purlins, channels, or angle iron. Hardened steel setscrew. Max. flange size: ¾". Meet Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69.

C-CLAMPS WITH SETSCREW

Attach to W and M beams. Hardened steel setscrew. Meet Fed. Spec. A-A-1192A (Type 23), WW-H-171-E (Type 23), ANSI/MSS SP-69, and ANSI/MSS SP-58 (Type 23). UL and C-UL Listed. ⅜" size is FM Approved.

C-CLAMPS WITH SETSCREW AND LOCKNUT

For structural attachment to top or bottom of metal beams, purlins, channels, or angle iron. Hardened steel setscrew. Meet Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69. ⅜" size is FM Approved.

WIDE-MOUTH C-CLAMPS

Use under roof installations with bar joist-type construction; or attach to structural shape flanges, with the vertical hanger rod offset from the flange edge.

With Setscrew and Locknut— Max. joist or flange thickness: 1¼", except Nos. 4HYG6 to 4HYG9 are 15⁄16". Meet Fed. Spec. A-A-1192A (Type 19 and 23), WW-H-171-E (Type 23), ANSI/MSS SP-69, ANSI/MSS SP-58 (Type 19 and 23), UL and C-UL Listed, FM Approved; except Nos. 4HYG6 to 4HYG9 meet Fed. Spec. A-A-1192A (Type 19), WW-H-171-E (Type 19), ANSI/MSS SP-69, and ANSI/MSS SP-58 (Type 19).

CHANNEL-TO-BEAM

Attaches to beam and supports strut.

MULTIFLANGE

Structural attachment to bottom of purlins and beams to support threaded rod. Swivel feature for sloped roofs. UL Listed for fire protection applications (max. 3" Schedule 40 steel pipe).

PURLIN

Attaches to lower flange of metal beams or purlins with 45° flanges up to 2" long and 90° flanges up to 1½"H. Hardened steel setscrew. Meets Fed. Spec. WW-H-171 (Type 23) and MSS ANSI/MSS-SP-58 (Type 19 and 23); install in accordance with ANSI/MSS-SP-69.

BEAM CLAMP STRAPS AND SLIP LOCK STRAP

Retainer straps for universal clamps. Field bend and use jam nut over hanger rod to secure. Add 2" width of flange to determine min. strap length. Slip lock strap is for retrofit applications.

Pipe Repair Clamps

Use to repair pipe without dismantling connections and to join pipes without threaded connections. Have 304 stainless steel band and Nitrile gasket.

Redi-Clamp®—Use for repairing pinhole leaks, punctures, and splits. Drop-in bolts allow easy installation. Ductile iron lugs and carbon steel nuts and bolts.

Full Circle—Fabricated stainless steel lugs can be installed in tight spaces and may be used to join plain pipe of the same diameter. 304 stainless steel stud bolts. Single-band clamps have 360° gasket seal for support, and a "keeper bar" that helps close clamp during installation. Steel nuts and bolts.

Single, Weld Plate
No. 2UKP6

Twin, Weld Plate
No. 2UKR9

Mounting Rail
No. 2UKW5

Weld-Plate and Rail-Mount Vibration Reduction Clamps

- Max. pressure: 1500 psi
- Temp. range: -22° to 194°F

Easy-to-assemble clamps are welded in place or rail mounted to secure hoses, piping, and tubing. Ribs in clamp bore and polypropylene cushioning reduce wear due to vibration, rubbing, and chafing. Meet ASSE standards.

Smooth Bore, Single—Chamfered, smooth core helps to reduce wear and extend the life of hoses.

Single Clamps—Recommended for systems without dynamic loads.

Twin Clamps—Ideal for general-duty applications subject to moderate levels of shock and vibration.

Single Line, Rail-Mount—Use with steel mounting rail No. 2UKW5 (sold separately) to install multiple clamps side-by-side. Once mounted, clamps can be slid along rail for proper alignment.

Pipe Clamps and Supports

BEHRINGER®

Use to secure tubing and pipe, while reducing noise and vibration.

Bolt Plate Mounting—Include a base plate with bolt holes to secure clamp.

Rail Mounting—Can be mounted directly to a single channel using rail nuts.

Weld Plate Mounting—Clamps include weld plate for welding directly to the support structure.

Single and Double Clamps with Santoprene™ Insert—Smooth bore helps prevent bacteria and debris from collecting; also dampens and absorbs vibration.

For high-purity and washdown applications.

Single Clamps with Polypropylene Insert—Heavy-duty clamps withstand shock and vibration of hydraulic systems up to 5000 psi.

Twin Clamps with Polypropylene Insert—Use to manage multiple lines; withstand shock and vibration of hydraulic systems to 1500 psi.

Anti-Corrosion Tube Clamps

STAUFF®

- Max. pressure: 2000 psi
- Temp. range: -13° to 194°F

Feature corrosion-resistant 316 stainless steel material with a clamp body that's flame-retardant, UV-stabilized construction. Designed to reduce the effects of pipe corrosion and have drainage channels to aid in water dispersal. Meet API RP 552, NACE SP 0108-2008, dimensional standards to DIN 3015-1, and fully interchangeable.

Safety Spray Shields

- ANSI Class #150

Totally enclose flange for complete spray protection. Shields are UV and chemical resistant. Install with hook-and-loop fasteners and drawstrings.

PTFE

- Max. temp.: 450°F

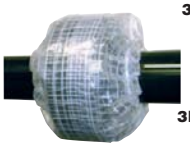
Constructed of 3-ply multilayered reinforced PTFE-coated glass cloth, PTFE thread, and drawstring. PTFE stiffener lines the inside for additional protection. Include pH indicating patch.

PVC

- Max. temp.: 170°F

Constructed of reinforced yellow polyvinyl chloride cloth, white polyester thread, and drawstring. Include pH indicating patch.

POLYETHYLENE



- Max. temp.: 170°F

Constructed of transparent reinforced polyethylene cloth, white polyethylene thread, and drawstring.

Adjustable Pipe Saddle Supports

No. 4LVD5

No. 5LWT9

No. 4LVA9

Cradle and support pipe during and after installation; also provide support for stationary pipe during vertical adjustment (approximately 4½"). Adjustable supports meet Fed. Spec. A-A-1192A (Type 38) and WW-H-171-E (Type 39), MSS SP-69, and MSS SP-58 (Type 38). Insulation shields meet Fed. Spec. A-A-1192A (Type 40), WW-H-171-E (Type 41), MSS SP-69, & MSS SP-58 (Type 40).

Fiberglass Pipe Insulation

GA Pipe Fitting Insulation—Preformed fiberglass insulation for 90° elbows and tees eases installation and provides for greater thermal performance. Includes matching PVC cover. Installs with 1" Pipe Fitting Insulation Tape No. 6WXE4, sold separately. Use 3" Pipe Insulation Tape No. 4LFJ3 to seal butt joints. Insulation meets ASTM C547 and C300 Series.
- Application temp. range: 0° to 450°F
- White color

Owens Corning® Fiberglas™ Pipe Insulation—The pressure sensitive adhesive system features a self-sealing flap to ease installation. GREENGUARD Certified.
- 3-ft. lengths
- Service temp. range: 0° to 1000°F
- White color jacket

MINIMUM QUANTITY OF 3" WIDE ASJ TAPE ROLLS REQUIRED		
Iron Pipe or Copper Tube Size (in.)	No. of Sections per 25-ft. Roll	No. of Sections per 150-ft. Roll
½ to 1⅜	up to 10	up to 60
1½ to 3⅛	up to 8	up to 48
4 to 6	up to 5	up to 30

Example: 15 sections of 1.0" nominal pipe size would require two 25-ft. rolls of tape.

Owens Corning® ASJ Max Fiberglas™ Pipe Insulation—Cleanable, encapsulated paper jacket doesn't support mildew or mold growth. Jacket resists moisture during intermittent, short duration precipitation exposure during installation (with joints sealed per installation guidelines). SSL® Max closure system provides a tight, reliable seal without glue or staples. Certified by SCS Global Services to contain a minimum of 53% recycled glass content, 31% pre-consumer and 22% post-consumer. GREENGUARD Gold Certified. Meets UL 723, ASTM E84, and CAN/ULC S-102, ASTM C547, and ASTM C1136, Types I – IV.
- 3-ft. lengths
- Service temp. range: 0° to 1000°F (with heat-up schedule)
- White color

Owens Corning® 3"-Wide Pipe Insulation Tape—Seals end joints and completes the closure systems.
- Service temp. range: 25° to 110°F (ambient)
- Service temp. range: -20° to 150°F
- White color jacket

Owens Corning® 1"-Wide Pipe Fitting Insulation Tape—Vinyl pressure-sensitive tape for joining pipe and fitting insulation.
- White color jacket

Fiberglass Pipe Insulated Fitting Covers and Insulated Jacketing

- White color

Easily fit around pipe to create a protective barrier. Suitable for indoor or outdoor use on chilled water, hot water, steam and other piping systems in commercial, industrial, and institutional applications. Insulated Fitting Covers, when combined with Insulated Jacketing and PVC solvent cement (sold on page 2819), can form a sealed system suitable for washdown applications in food, beverage, and pharmaceutical facilities. Comply with ASTM D257, D638, D790, D792, D1784, D3679, E84, E136; USDA, ICBO, SBCCI, and BOCA.

FIBERGLASS INSULATED FITTING COVERS

- Temp. range: -32° to 150°F
- R-value: 3.5

Fit over bare pipe elbows; include insert. PVC and fiberglass construction.

PVC INSULATED PIPE JACKET

- 4-ft. lengths
- Temp. range: -30° to 150°F

Fits over bare pipes and pipe insulation. PVC construction.

Fits Max. O.D.	Approx. R Value	90° Elbow Item No.	End Cap Item No.	Tee Item No.

90° Elbow Insulation No. 4NPY6

Tee, Insulation No. 4NRE9

K-FLEX USA

Flexible Elastomeric (Rubber) Closed-Cell Pipe Insulation

PIPE INSULATION

- 6-ft. lengths

Elastomeric material retards heat loss, prevents condensation, and provides effective moisture vapor resistance. Environmentally friendly and CFC-free. Mold- and mildew-resistant, fiber-free, and nondusting. Can be used in underground applications above the water table. Seal before back-filling. Meets ASTM C 411, C 534 Type 1, D 1056-00-2B1, and E 84 2" 25/50 tested according to UL 723 and NFPA 255. CAN/ULC S102-M88, FMRC 2006 Approval Guide Chapter 14, NFPA 90A Sect. 2.3.3, and FM Approved. Meets UL 94-5V Flammability Classification (Recognition No. E300774) and UL 181 Sections 11.0 and 16.0.

Insul-Tube®

- Temp. range: -297° to 220°F
- MIL-P-15280, for tubing

Unslit tubing can be slit lengthwise and fit over existing pipes. Seal with No. 3F417 contact adhesive, see page 2835.

Insul-Lock® DS (Double Seal)

- Temp. range: -70° to 220°F

Preslit, preglued tubing has factory-applied pressure-sensitive adhesive on the seam, plus flexible PVC overlap tape with acrylic adhesive for added security.

FITTING INSULATION

- Temp. range: -297° to 220°F

K-Fit® prefabricated insulation is easier to install and provides a cleaner appearance than field-constructed insulation. Designed to fit over elbows and tees with no additional cutting or molding. Can be used for hot/cold water, chilled water, refrigeration, and air conditioning applications. Meets UL 94 and GREENGUARD Certified.

Pipe Insulation Tape

Adhesive

Noise Absorber

Brush Can

Protective Jacketing

Noise Barrier

Elastomeric Pipe Insulation K-FLEX USA

K-FLEX® PIPE INSULATION TAPE

No. 45AT32 is cork-filled and rubber-based while No. 45AR72 is a closed cell, flexible elastomeric foam. Nos. 45AT32 and 45AR72 have a pressure-sensitive adhesive and are ideal for insulating short pipe runs or valves where installing tubing insulation is not practical. Nos. 52JR59 to 52JR62 have a smooth and tough surface that's easy to clean and is weather-, UV-, and abuse-resistant. Nos. 52JR59 and 52JR60 are ideal for outdoor use.

K-FLEX® MOUNTING ACCESSORIES

Adhesives help provide a permanent flexible bond over a wide variety of substrates. No. 45AR67 is for use with Nos. 45AT25 and 45AT35 jacketing. No. 45AR81 is for use with Nos. 45AR89 and 45AT18 jacketing.

K-FLEX CLAD® PROTECTIVE JACKETING

- Temp. range: -40° to 220°F

Nos. 45AR89 and 45AT18 are a flexible, nonmetallic, polymeric (CPE/PVC) protective jacketing that resists acids, chemicals, corrosion under insulation, humidity, moisture vapor intrusion, oils, and salt spray. Material is ideal for paper and pulp mills, industrial plants, and in marine applications. Nos. 45AT25 and 45AT35 are a multi-ply, laminate jacketing constructed of a PVC backing, and aluminum foil coated with a white protective polyester film. The puncture and dent-resistant jacketing has an outer film that is dirt and chemical resistant, and ideal for washdown and cleanroom applications.

K-FONIK® AB NOISE ABSORBER

- Temp. range: -40° to 185°F

This flexible, open-cell sound absorber is made from recycled, closed-cell foam particles bonded together. Use to decrease transmission noise on large pipes in most industrial applications.

K-FLEX DUCT® LINER

This fiber-free, closed-cell, flexible elastomeric foam insulation features sound absorption, moisture resistance, low thermal conductivity, and does not need additional facing. Its ideal for use as an acoustical/thermal insulation liner in industrial and commercial HVAC ducts.

Flexible, Halogen-Free Elastomeric (Rubber) Pipe and Fitting Insulation

K-FLEX USA

No. 4NPV4

- Temp. range: -297° to 250°F
- Green color

K-Flex ECO™ Pipe Insulation—Will not contribute to stress crack corrosion on high-temperature stainless steel applications. Can be used in solar hot water, low-pressure steam, food processing, cleanroom, and marine applications. Complies with IMO and Solas specifications. Meets stringent testing for U.S. Navy combat ships, as described in the Electric Boat Specifications EB 4013.

K-Flex ECO™ Pipe Fitting and Sheet Insulation—Prefabricated fittings are easier to install and provide a cleaner appearance than field-constructed fittings. Designed to fit over elbows and tees with no additional cutting or molding. Can be used for hot/cold water, chilled water, refrigeration, and air conditioning applications. ECO™ Sheets can be cut to size for specific applications.

Flexible Tundra® Polyolefin Pipe Insulation

armacell®

- 6-ft. lengths

Help prevent heat gain and condensation or frost formation on water and air conditioning lines. Use with 320 or 620 contact adhesive or other approved sealing system. Polyethylene construction. Meet ASTM C 1427.

PRE-SLIT, BLACK

- Temp. range: -160° to 200°F

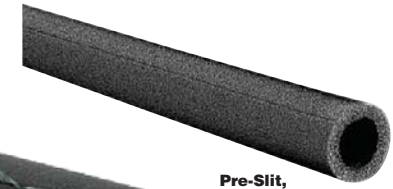
Quickly slide over pipe or tubing. Slit lengthwise when applying to existing tubes.

PRE-SLIT/PRE GLUED, BLACK

- Temp. range: -160° to 200°F

Preslit, self-sealing tubing has factory-applied adhesive and built-in release tabs. Can be pushed around P-traps and elbows up to and including 1" copper tube size. Mitering is recommended for complex joints.

PRE-SLIT/PRE GLUED, WHITE



- Temp. range: -330° to 210°F
- FlowGuard Gold compatible

Ideal for use in cleanrooms, hospitals, and any application where pipes are exposed, and aesthetics are important. ASTM C 1427; ASTM E 84; ASTM E 84, 25/50 flame and smoke rating. CAN/ULC S102.2-M88. City of LA Report RR8316. Dade Co. FL Acceptance 95-1215.08. NYC MEA 305-93.

INSULATION SHEETS

- Temp. range: -330° to 210°F

Closed cell design and flexibility is ideal for wrapping large pipes, tanks and vessels. GREENGUARD certified for use in hospitals and schools. ASTM E 84, 25/50 flame and smoke rating.

Insul-Sheet® S2S Insulation

- Temp. range: -297° to 220°F
- Environmentally friendly; CFC-free

Insulates ductwork, pipes, fittings, and tanks. Highly flexible with a durable skin that resists solvents and chemicals. Smooth surfaces improve adhesive coverage.

No. 3F415

PSA BACKING

Peel-and-stick backing allows fast installation; eliminates adhesive-related spills, VOCs, and odors.

Aluminum Pipe Insulation

- 3-ft. lengths
- Temp. range: -297° to 220°F
- Silver color

K-Flex Clad® aluminum insulation is adhered to an outer polypropylene sheet, and laminated to an aluminum foil cladding that provides resistance to acids, alkali, salts, oil, fats, and aliphatic hydrocarbons. Impermeable to gases and moisture. Protects against abuse, impact, and UV rays.

ITW INSULATION SYSTEMS

Pipe Insulation and Aluminum Jacketing

PIPE INSULATION

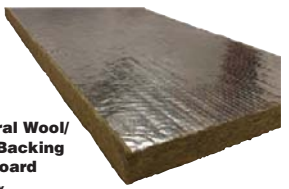
- Temp. range: -297° to 300°F

EPDM rubber-based elastomeric material is flexible, lightweight, UV resistant, and requires no outdoor weather protection. Insulation is noncorrosive to copper or stainless steel, requires no vapor barrier, and is paintable. Can be used on hot liquid heating systems, cold water plumbing, and chilled water and refrigeration lines to control condensation formation. Meets ASTM C534, C692, D635, E84, and E96.

JACKETING ALUMINUM ELBOWS

Help protect insulation and underlying pipe or vessel from corrosive atmospheres, physical damage, UV exposure, and water. Feature a 3-mil thick polysurlyn moisture barrier laminated to the inside surface to help prevent corrosion of the underlying metal pipe. Suitable for standard outdoor use on horizontal tanks, pipe, and vertical tank insulation systems. Meets ASTM C1371, C1729, and E84.

INSULATED PIPE JACKET



Aluminum material helps protect mechanical insulation systems including equipment, pipe, and vessels. Features a 3-mil thick polysurlyn moisture barrier laminated to the inside surface to help prevent corrosion of the jacketing and the underlying equipment, metal pipe, or vessel. Ideal for use on all standard outdoor pipe, vertical tank insulation systems up to 8-ft. dia., and all horizontal tanks. Meets ASTM C1371, C1729, and E84.

Mineral Wool/ Foil Backing Board

Super Firetemp® Board

ROXUL The Better Insulation

IIG Industrial Insulation Group, LLC A Johns Manville Company

High Temperature Insulation

- Durable and noncombustible

MINERAL WOOL BOARD

- Temp. range: 0° to 1200°F

Lightweight material is rigid, water repellent, and ideal where compressive resistance is required. Insulation has excellent thermal resistance, is noncorrosive, and chemically inert. Suitable for use in high temp. applications including drying oven equipment, petrochemical and power generating equipment, and storage tanks. Meets ASTM C612 Type 1VB, E136, E84, C665, and C795.

SUPER FIRETEMP® BOARD

- Temp. range: 0° to 1700°F

Inorganic material is essentially dust-free and can be machined into a variety of shapes or sizes. Ideal for very high temp. applications including furnace wall structural supports and for use behind fire brick to help prevent thermal spalling. Meets ASTM C656, C795, E72, E119, E84, E136. UL 263, UL 1479, and UL 1709 Listed. NFPA 251 compliant.

Fiberglass and Cotton Duct Insulation

For use in commercial and industrial heating, air conditioning, and power and process equipment applications.

DUCT INSULATION – FROST KING

- Temp. range: 35° to 150°F (cotton), 35° to 250°F (fiberglass)
- 16"W x 48"L" (cotton), 12"W x 15 ft. L (fiberglass)

Easy-to-install insulation helps insulate, reduce vibration, and can be installed on air conditioning or heating ducts. Foil jacket. No. 48H491 is a natural cotton insulation made from recycled denim and meets ASTM E408. No. 48H490 meets NFPA 90A, NFPA 90B, and ASTM C1136 Type II.

DUCT INSULATION WRAP – JOHNS MANVILLE

- Temp. range: -32° to 250°F
- 48"W x 25"L

For HVAC systems that operate below ambient temperatures, and where temperature control and a vapor barrier are required. Insulation comes with a vapor barrier and a 2" stapling tab. Meets ASTM C411, C553, C665, C1104, C1136s, C1290, C1338, E84; NFPA 90A; UL, C-UL Listed.

DUCT INSULATION BOARD – JOHNS MANVILLE

- Temp. range: -32° to 450°F (unfaced side), -32° to 150°F (faced side)

For systems that operate below ambient temperatures and where a vapor barrier is required. Insulation has square corners for a finished appearance on duct and equipment systems. Cuts easily with a utility knife and can be secured with mechanical fasteners or adhesive. Meets ASTM C612, Type IA; C612 Type IB; C553 Type III, HH-I-558C, HH-I-558B; E-84; C795; C1136. Mil. Spec. I-24244C. NFPA255. NRC 1.36. UL Listed.

No. 6ZKK3

HIGH TEMPERATURE INSULATION – ITW

- Temp. range: -297° to 297°F
- 24"W x 48"L

Lightweight, moisture-resistant polyisocyanurate material has excellent thermal performance. Insulation features low moisture vapor permeability and good compressive strength. Density: 2#. Meets ASTM D1622, C518, E96, E84 at 1", D2126 Dimensional Stability.

Pipe, Hose, and Valve Insulation

Insulated Throw Blankets and Pipe Jackets— Can reduce heat loss and insulate barrels, dies, extruders, hoses, and pipe. Removable and is reusable. Insulated Throw Blankets require a strap and buckle Nos. 34CY92, 34CY91, or 34CY90, sold separately below.

Accessories—Nos. 34CY92, 34CY91, and 34CY90 are durable fiberglass straps for installing insulated throw blankets. Feature steel roller buckles for easy adjustment and help ensure a secure fit. Nos. 34DA19 and 34DA20 allow you to measure high-temperature surfaces and are ideal for use when installing insulation.

Ceramic Fiber Blankets—Aluminum silicate fiber material is ideal for insulating pipes that transport high-temp. materials. Include hold-in-place straps on the inside and feature a top flap you can open to release heat if needed. Meet UL 723.

- Max. temp.: 2300°F, except No. 34DA14 is 2600°F

Valve Insulation—Reusable valve covers feature dual-layer mineral wool and fiberglass insulation, plus a durable silicone-coated fiberglass cloth jacket. Included adjustable draw cord and lacing anchors for a tight secure fit.

- Max. temp.: 900°F
- 3" thickness

Flange and Valve Insulation—Reusable insulation covers help reduce heat loss and energy costs. Silicone-coated fiberglass material is suitable for a variety of flange and valve sizes.

- Max. temp.: 900°F

Ceramic Fiber Insulation—Aluminum silicate fiber material is ideal for insulating pipes that transport high-temp. materials. Meet UL 723.

- Max. temp.: 2300°F, except No. 54TP62 is 2400°F

Melamine Preformed Pipe Insulation and Sheets

TECHLITE™

- Temp. range: -40° to 350°F
- Pipe insulation is 4-ft. long

Fiber-free insulation system is produced from ozone-friendly TechLite® melamine foam. Include ship-lap joints and/or relief cuts to accommodate curved surfaces. Preformed sections fit pipes and tubes. Flat sheets can be used for ductwork and large vessels. Insulation meets ASTM C1410 Cellular Melamine, ASTM E84 25/50 Rating.

379 Series—Covered with a high-strength, 30-mil, polyester-reinforced PVC outer jacketing. Covering is UV-resistant and approved for outdoor use; absorbs impacts and returns to its original shape. White color.

879 Series—High-gloss semirigid 20-mil PVC outer jacketing has excellent antibacterial and low-mold properties. Approved for severe washdown requirements of sanitary processes. Ideal for food and beverage, clean room, and biopharm applications. White color.

ASJ 79 Series—Covered with a fiber-reinforced, paper-and-foil lamination; an excellent choice for interior applications. True foil barrier has very low vapor permeability. Outer cover is paintable or can be covered with a secondary jacket if used in outdoor applications. White color.

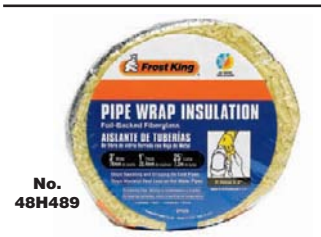
079 Series—Plain, light gray foam can be easily fabricated over nonstandard pipes or ducts; form and fit with simple hand tools. Can be layered or mitered to fit nonstandard curves or objects. Mechanically fasten or glue in place.

No. 32XV43

Self-Fusing Silicone Tape

ER Emergency Repair TAPE

- Operating temp.: -130° to 500°F



Protective overwrap is adhesive-free. For use in insulating electrical connections, protecting pipe threads, friction wrap for handle grips, tension wrap for bundles of wires and hoses, temporary hose repairs, and corrosion protection. Cures in 24 hr. and creates a permanent seal. Nos. 32XV29 to 32XV34 have a triangular shape that helps assure a smooth and uniform wrap over difficult shapes such as bus bars, cable harnesses, coils, and splices. No. 32XV43 includes 1 roll of black tape and 1 roll of red tape. All items meet Mil. Spec. CID A-A-59163 and are UL 510 Recognized.

Rubber Flange Gaskets—Full-Face

- ⅛" thick
- ANSI sized to fit 150-lb. flanges

NEOPRENE BLEND (BLACK)
- Temp. range: -20° to 190°F

Have moderate resistance to ozone, oxidation, water, hydraulic silicate, and oil.

SBR BLEND (RED)
- Temp. range: -20° to 180°F

Good heat resistance for low-pressure hot and cold water applications.

FDA NITRILE (OFF WHITE)
- Temp. range: -25° to 180°F

Made with FDA-approved ingredients.

FKM FLUOROELASTOMER (BLACK)
- Temp. range: -10° to 400°F

Excellent resistance to oils, fuels, chlorinated solvents, hydrocarbons, and strong acids.

SILICONE (RED)
- Temp. range: -80° to 400°F

Excellent performance in extreme temperatures.

Garlock SEALING TECHNOLOGIES

PTFE and Fiber Ring Gaskets and Sheets

- Ring gaskets are ANSI sized to fit 150-lb. flat-face and raised-face flanges

RING FLANGE GASKETS

A. Virgin PTFE
- Max. pressure: 150 psi
- Temp. range: -450° to 500°F

High-purity gaskets provide a low-stress seal with high chemical compatibility.

B. Inorganic Fiber Garlock IFG 5500
- Max. pressure: 1200 psi
- Temp. range: -100° to 800°F, 550°F continuous

Thermally stable gaskets resist aliphatic hydrocarbons, gasoline, saturated steam, inert gases, and most refrigerants.

C. Microcellular PTFE Garlock 3545
- Max. pressure: 1200 psi
- Temp. range: -450° to 500°F

Resist strong acids, caustics, and hydrocarbons.

D. Flexible Graphite with 316SS Insert
- Max. pressure: 2000 psi
- Temp. range: -400° to 850°F

Seal effectively during thermal cycling, resist corrosive chemicals, and are for use in critical sealing applications.

E. PTFE with 304SS Insert
- Max. pressure: 800 psi
- Temp. range: -250° to 450°F

Void-free, virgin PTFE.

PTFE and Fiber Ring Gaskets and Sheets

GRAINGER APPROVED · Thermoseal An Independent Klinger Company · TEADIT Sealing for a Safer and Greener Tomorrow · Garlock SEALING TECHNOLOGIES

F. Expanded PTFE Gore™ Style GR and UPG Style 800
- Max. pressure: 3000 psi
- Temp. range: -450° to 600°F

Dimensionally stable and resist creep and cold flow. Provide low stress-to-seal for applications using plastic and glass-lined flanges. Resist many aggressive chemicals. Nos. 4CYR7 to 4CYR9, 4CYT1 to 4CYT8 are cut from sheet material. Nos. 38R343 to 38R353 are molded gaskets.

G. Aramid Fiber with Nitrile Binder Garlock 3000
- Max. pressure: 1000 psi
- Temp. range: -100° to 700°F, 400°F continuous

Help reduce fluid loss, maintenance, energy consumption, and inventory costs.

H. PTFE with Aluminosilicate Microspheres Garlock Gylon® 3504
- Max. pressure: 800 psi
- Temp. range: -450° to 500°F

Suitable for use with some caustics and moderate concentrations of hydrocarbons, hydrogen peroxide, refrigerants, and solvents.

I. Synthetic Fibers with Nitrile Binder (Thermoseal Klingersil® C-4401)
General-purpose gasket material features good sealability, chemical resistance, and good creep relaxation.

J. Graphite with Nitrile Binder Garlock 9900
- Max. pressure: 2000 psi
- Temp. range: -100° to 1000°F

This high-temperature gasketing minimizes cold flow and has reduced creep relaxation.

K. Expanded PTFE
- Max. pressure: 2900 psi
- Temp. range: -400° to 599°F

Compresses easily to minimize creep and cold flow.

L. PTFE with 304 SS Reinforcement Core
- Max. pressure: 150 psi, except No. 16T714 is 125 psi
- Temp. range: -400° to 500°F

Used for pipeline blocking, this pipeline gasket has a handle to ease installation.

M. SYNTHETIC FIBERS WITH A PROPRIETARY RUBBER BINDER GARLOCK 3760
- Max. pressure: 500 psi
- Temp. range: -100° to 400°F

Create their own low-pressure load with proprietary rubber binder. Material won't degrade when in contact with oils and is conformable to irregular flanges.

GASKET SHEETS

Expanded PTFE, Nos. 38VP92 to 38VP95
Softer and more flexible than conventional PTFE so it can easily conform to rough and irregular surfaces. Minimal creep at elevated temperatures.

PTFE with Glass Microspheres Garlock 3504, Nos. 16T703 to 16T706
Improved performance over PTFE. Suitable for use with some caustics, moderate concentrations of acids, hydrocarbons, refrigerants, and solvents.

Flange Gaskets and Spiral Wound Metal Gaskets

Thermoseal An Independent Klinger Company

FLANGE GASKETS (KLINGERSIL® C-4401)

- Max. pressure: 150 psi
- Temp. range: 0° to 750°F

Feature greater sealability, chemical resistance, and good creep relaxation.

SPIRAL WOUND METAL GASKETS

- Max. pressure: 150 psi
- Temp. range: 0° to 932°F

Suitable for use on raised face and flat face flanges. Type CR gaskets feature a solid metal outer ring that functions as a centering device and a compression stop. Type CRIR gaskets feature solid metal outer and inner rings that help protect the inner windings of the gasket element from high temperatures.

Garlock SEALING TECHNOLOGIES

GA GRAINGER APPROVED

The Flexitallic Group

Metal-Reinforced Spiral-Wound Ring Gaskets

Meet ANSI B16.20.

GARLOCK RW

- Temp. range: -320° to 842°F

With 304 stainless steel windings, flexible graphite filler, and a carbon steel centering ring. For hydrocarbon processing and refining, pulp and paper, and oil and gas applications.

GARLOCK RWI

- Temp. range: -320° to 500°F

304 stainless steel inner ring protects sealing elements from process media. 304 stainless steel winding, PTFE filler, and carbon steel centering rings.

GA SPIRAL-WOUND

- Temp. range: -320° to 842°F

304 stainless steel windings, with flexible graphite filler and carbon steel centering rings.

FLEXITALLIC CGI

- Temp. range: -150° to 842°F

304 or 316 stainless steel windings with flexible graphite filler. Include inner ring. Suitable for use with flat face and raised face flanges and specified for high pressure/temperature service or where toxic or corrosive carbon steel centering materials are present.

No. 1TUZ8

FLEXITALLIC CG

- Temp. range: -150° to 842°F

316 stainless steel windings with flexible graphite filler. Feature an external ring that centers the carbon steel centering gasket on the flange face. Provides additional radial strength to help prevent gasket blowout and acts as a compression stop. General purpose gasket suitable for use with raised face and flat face flanges.

WATTS REGULATOR

Lead-Free Dielectric Unions

- Max. pressure: 250 psi, except 3" and 4" pipe sizes are 175 psi
- Max. temp.: 180°F

Installed between pipes made from dissimilar metals to help prevent accelerated deterioration and corrosion. Include union nut, 2 tailpieces, and a gasket. Ideal for use in air and water conditioners, hot water storage tanks, processing tanks, and steam, gas, and water piping. Certified for use in potable water applications. Meet ANSI B16.39; Federal Specifications for Tensile Strength and Thread End Connections.

Metal Hose Assemblies (Hex MNPT x Hex MNPT Fittings)

- Max. temp.: 1200°F

Feature 304 stainless steel braid material with hydroformed 321 stainless steel hose. Flexible with an enhanced bend radius to minimize connection misalignment. Ideal for use wherever vibration may be a concern.

HOSE MASTER Inc.

Annuflex Flexible Metal Hose Assemblies with JIC Swivels

- Max. temp.: 1200°F
- Fabricated by ASME IX Certified welders

Hydroformed for long cycle life and can be bent to accommodate difficult configurations. Resist permeation, abrasion, and overbending. Excellent chemical compatibility. Ideal for full-vacuum applications and where there is a potential for catastrophic failure with rubber hose.

HOSE MASTER Inc.

Metal Hose Assemblies

Flexible metal hoses help absorb vibration and compensate for misalignment. Grainger Approved assemblies are mechanically formed, while Hose Master Annuflex style assemblies are hydroformed. All hose assemblies have comparable static minimum bend radiuses and a 304 stainless steel braid. Ideal for air compressors, liquid and vacuum pumps, and pump suction discharge lines. 316 stainless steel hoses generally offer wider corrosion and pitting resistance than 321 stainless steel.

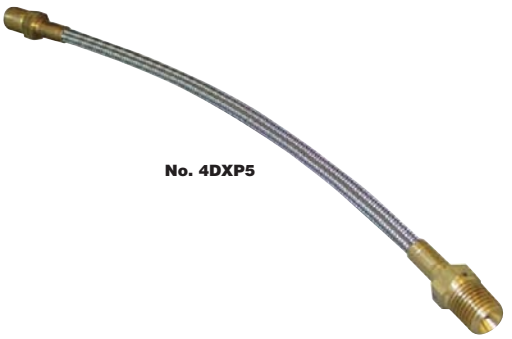
No. 2ZV24



- Max. temp.: 850°F
- Hydroformed for long cycle life
- Fabricated by ASME IX Certified welders

Flexible hoses have 2 fixed carbon steel 150-lb. flanges at each end. Absorb vibration and compensate for misalignment during hookup. Suitable for air compressors, vacuum pumps, and centrifugal pumps.

PTFE Flexible Hose Assemblies with Stainless Steel Cover—MNPT

GRAINGER APPROVED

No. 4DXP5

- Temp. range: -65 to 450°F
- Smooth bore

PTFE tubing with 304 stainless steel braid is compatible with 99% of fluids. Can be used in trucks, compressor discharge, petrochemical plants, chemical and steam applications, food processing plants, and more. PTFE tubing meets FDA and SAE 100R14.

HOSE MASTER Inc.

Interlocked Metal Hose Assemblies

No. 16T775

- Max. temp.: 1200°F
- Unbraided

INTERFLEX ROUGHBORE

General-purpose hose is made from a single strip of metal that is profiled and locked onto itself. The interlocked sections can slide back and forth, allowing greater flexibility and durability. Coupled with 304 stainless steel Schedule 40 male nipples welded at each end. Suitable for high-temperature ducting and as a hot air blower hose.

ULTRAFLEX SMOOTHBORE (LINED)

Constructed from two 0.018" 304 stainless steel strips to form a durable armored hose with a smooth, abrasion-resistant metal liner. Suitable for bulk transfer of grain, wood chips, plastic pellets, and other abrasive materials.

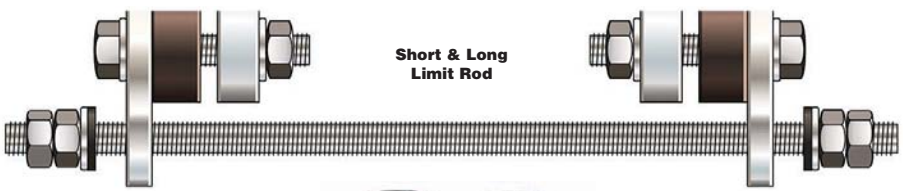
Molded Expansion Joints

- Max. pressure (Drilled): 225 psi at 72°F
- Max. pressure (Flanged): 231 psi



Flexible, nonmetallic joints absorb pipe movement/stress to reduce system noise and extend system life. Models can also absorb water pulsation and minimize water hammer. Single Sphere models help prevent piping system damage by absorbing contraction and elongation movement caused by temperature variances. The floating flanges ease installation. Double Sphere models help prevent piping system damage by absorbing greater contraction, elongation, and angular movement than single sphere models. Also act as a good electrical insulator. Corrosion-resistant plated carbon steel flanges rotate for quick installation. Neoprene connectors are tapped to ANSI 125/150 drilling. All joints are ideal for use in HVAC, petrochemical, industrial piping, power generating, marine service, pulp and paper, water and wastewater, and pollution control applications.

Wide Arch and Threaded Union Molded Expansion Joints

Use to help reduce vibration and dampen sound transmission. Meet ANSI B16.5.

SHORT AND LONG LIMIT ROD

This assembly consists of 2 control rods (tie rods) placed across an expansion joint from flange to flange to help prevent damage caused by excessive pipe movement. Designed to only limit extension movement. Flanged connection.

WIDE ARCH

- Max. pressure: 150 psi
- Temp. range (EPDM): -50° to 240°F
- Temp. range (Neoprene): -50° to 212.5°F
- Vacuum: 15" Hg at 72°F

Feature a larger arch and allow for greater movement and lower spring rate than traditional spool-type rubber expansion joints. Flanged connection.

Rotary Unions, Cartridges, and Joint Elbows

Duff-Norton

Transfer steam and fluids to rotating drums or rolls to control surface temperatures. Unions and elbows also transfer air or hydraulic fluid to moving components, and add fluids to mixers while in motion. All models have NPT connection, except Rotary Union Cartridges.

9000 SERIES ROTARY UNIONS

- Max. speed: 700 rpm
- Max. pressure: 250 psi water; 150 psi steam (except Nos. 35PP27 to 35PP38 are 175 psi); 100 psi hot oil
- Max. temp.: 375°F water, steam, hot oil (except Nos. 35PP27 to 35PP38 are 378°F steam and 600°F hot oil)

Bellows-type seal resists hangup in contaminated media. Dual-flow joints accept NPT threaded stationary pipe.

5000 SERIES ROTARY UNIONS

- Max. speed: 1000 rpm NPT; 550 rpm air
- Max. pressure: 750 psi water; 120 psi steam; 100 psi hot oil; 300 psi air
- Max. temp.: 300°F water; 350°F steam; 395°F hot oil

Corrosion-resistant unions have 2 precision bearings with fluorocarbon O-rings. Dual flow unions require rotary joint elbow.

5000 SERIES ROTARY JOINT ELBOWS

- Max. pressure: 750 psi water; 120 psi steam; 100 psi hot oil; No. 35PP39 is also 300 psi air
- Max. temp.: 300°F water; 350°F steam; 395°F hot oil

Convert Duff-Norton Rotary Unions from single to dual flow.

Air Conditioning and Refrigeration Copper Coils and Straight Lengths

- Temp. range: 32° to 400°F

Copper refrigeration tubing easily connects air conditioning and refrigeration equipment, using sweating or flare fittings. Coils are nitrogen purged to reduce contaminants. Meets ASTM B280.

Note: Prices subject to change without notice. Call 1-800-GRAINGER (472-4643) for current pricing.

Type K and Type L Copper Water Tubing, Coils

- Temp. range: 32° to 400°F

Use Type K tubing to connect water mains and meters and to form heavy-duty underground vacuum pump lines. A high melting point helps maintain pressure when subjected to flames; ideal for fire sprinkler systems. Thick-walled, Type L tubing is designed for above- or below-ground water service and hydronic heater applications. All tubing meets ASTM B88 and building codes in all 50 states.

Type K, L, and M Copper Water Tubing, Straight Lengths

MUELLER INDUSTRIES

- Rated internal working pressure up to 100°F
- Temp. range: 32° to 400°F

Type K tubing is used to connect water main and meters, and to form heavy-duty underground vacuum pump lines. Thick-walled Type L tubing can be used for both inside and outside applications. Thin-walled Type M is commonly used in homes, behind walls. Tubing meets ASTM B88 and meets or exceeds building codes in all 50 states.

Rapid Pipe Repair Clamps

ROTHENBERGER
pipetool technologies at work

Compact repair clamps are simple to use and can easily repair a burst or leaking pipe. Once installed, they allow the pipe to function under normal temperatures and pressures until you can complete a permanent repair. Non-toxic construction, reusable, and suitable for use with metal, multilayer, or plastic pipe.

GA GRAINGER APPROVED

304 and 316 Stainless Steel Tubing and Coils—Welded and Seamless

Meets ASTM 269.

304 STAINLESS STEEL

- Temp. range: -423° to 1500°F

The most versatile and widely used of stainless steel grades, due to its combination of corrosion resistance, formability, and ductility.

Welded

Less costly than seamless or welded-and-drawn tubing and requires less stock removal in machining applications. Can also be produced with extremely thin walls.

Seamless

Features heavier wall thicknesses for mechanical applications. Ideal for food and beverage, pharmaceutical, and chemical and petrochemical processing applications.

316 STAINLESS STEEL

- Temp. range: -325° to 1500°F

Provides the best resistance to pitting and corrosion of any of the austenitic (300 series) stainless steels. Extremely ductile, with excellent strength at elevated temperatures.

Welded

Weld bead remains on the inside diameter. Less expensive than seamless or welded-and-drawn tubing.

Seamless

Seamless tubing can be produced with heavier wall thicknesses for mechanical applications. Ideal for hydraulic and instrumentation tubing in chemical, textile, and pulp and paper industries, and in marine environments.

Aluminum and 316 Stainless Steel Instrumentation Tubing

GA GRAINGER APPROVED

- Seamless construction

Aluminum—Features very good corrosion resistance and finishability, as well as excellent weldability. Strength approximates that of mild steel. Can be fabricated by most common techniques. Meets ASTM B210 and WW-T-700/6.
- Temp. range: -452° to 400°F
- Length: 6 ft.

316 Stainless Steel—Can be used with Hamlet, Swagelok®, and Parker A-Lok® metric fittings, with water, air, natural gas, oil, and hydraulic fluid. Sterilize with steam. Use with metric instrumentation fittings, sold on page 2858. Meets ASTM A269, except Nos. 4NTK1 to 4NTK6 meet DIN EN10216-5.
- Temp. range: -325° to 1500°F
- Length: 2m

Dubl-Barb® Brass Barbed Fittings

Parker

- Max. working pressure: 150 psi (5/32" to 3/8"); 100 psi (1/2")
- Temp. range: -65° to 90°F (5/32" to 3/8"); -65° to 75°F (1/2")

Compact, 1-pc. push-on barbed fittings don't require any type of clamp. Use to quickly connect polyethylene tubing for use in environmental pneumatic controls and other low-pressure applications with water and air.

White Acetal Push-Button Tube Couplings

CPC

- Max. pressure: 120 psi
- Temp. range: -40° to 180°F

Chemical-resistant fittings let you connect and disconnect by hand. Couplers have built-in shutoff valves. Use for engine system, biohazard detection, printing and ink, and cleanroom/sterilization, as well as in food/beverage and chemical applications. Meet USDA, NSF, and RoHS compliant.

Super Speedfit®

Gray Acetal Push-In Fittings

- Max. pressure: 150 psi
- Temp. range: -14° to 167°F (air); 33° to 140°F (water)

For use with PVC, polyethylene, nylon, polyurethane, brass, copper, and mild steel tubing. Fittings have nitrile O-ring seal, stainless steel teeth, and can be used for potable water, food, chemical, pneumatic, reverse osmosis, plumbing, and fiber optic applications. FDA and NSF Approved.

Polypropylene Push-In Fittings

Super Speedfit®

- Max. pressure: 150 psi
- Temp. range: 9° to 150°F

EDPM seal and stainless steel teeth provide reliable retention. Just push on to connect. Use with LDPE, HDPE, and polypropylene tubing in potable water, food, cleaning, water purification, car wash, and fiber optic applications. FDA Approved.

Nickel-Plated Brass Push-To-Connect Fittings and Chrome-Plated Mini-Ball Valves

GA GRAINGER APPROVED

- Max. pressure: 250 psi
- Temp. range: 0° to 160°F

Designed for use on all pneumatic circuits and feature a quick connect/disconnect positive seal. Push-in design requires no special tools. For use with nylon, polyethylene, and polyurethane tubing and suitable for use in air, water, and oil applications.

MINI-BALL VALVES

Reduced port valves feature nitrile rubber seals, PTFE seats, and brass stem.

Prestolok™ Nickel-Plated Brass Push-To-Connect Fittings

- Max. operating pressure: 300 psi
- Max. operating temp.: 0° to 200°F (depending on tubing used)
- Pkg. qty.: 10

Compact, 1-pc., nickel-plated brass fittings are designed for low-pressure circuits, easy to assemble, and for use with polyethylene, nylon, or polyurethane tubing. Support ferrules or I.D. tube supports only required for thin-walled poly tubing. Vacuum applications depend on temperature and tubing type.

Silicone-Free Nickel-Plated Brass Push-To-Connect Fittings

legris

- Max. working pressure: 7 to 435 psi
- Working temp. range: -4° to 302°F
- FKM O-ring

Fittings are easy to install, connect, and disconnect. The high phosphorus chemical nickel plating resists abrasion, chemicals, and corrosion. Fittings are ideal for aggressive environments such as in welding applications where fittings must remain intact even if hit by weld spatter. FDA approved for use in food processing applications.

Metal Manifolds

PNEUMADYNE

No. 2KGZ2

No. 2KGZ9

- Max. pressure: 1000 psi, except stainless steel are 3500 psi
- Temp. range: -10° to 200°F, except stainless steel are -100° to 500°F
- Mounting hole: Nos. 49AV63 to 49AV90 are 0.26", stainless steel are 0.20"

Simple tube run design and layout reduces clutter, eases troubleshooting, and provides the basis for orderly tube runs. FNPT connections. Models with 90° port orientation allow manifolds to be configured and mounted in difficult applications. All are for use with air, water, and hydraulic oils, except black anodized aluminum are also for use with natural gas and gasoline.

Brass and Lead-Free Brass 45° and Flare Fittings

- Temp. range: -65° to 250°F
- Pkg. qty.: 10, except where noted

May be disassembled and reassembled repeatedly. Resist mechanical pull-out and are suitable for use with thin-wall tubing. Material and working pressure of tubing must be determined before using in a specific application. Suitable for use in refrigeration equipment, air compressors, and machinery. Can be used with flareable copper, brass, aluminum, and welded steel hydraulic tubing. UL Listed for flammable liquids. Meet SAE J512 and J513. Lead-free fittings are certified for use in potable water applications.

316 Stainless Steel 37° Flare Tube Fittings

Air-Way Manufacturing Company

GA GRAINGER APPROVED

- Temp. range: -160° to 1200°F

Superior chemical, water, and corrosion resistance for extreme applications. Good sealing reliability. Use as an adapter to hose assemblies, or as a tube fitting with flared stainless seamless or welded tubing.

Suitable for chemical plants, food plants, hydraulic applications, manufacturing facilities, water treatment plants, and beverage plants. Meet SAE J514.

Tube Size	Flare Thread Size	Max. Poly-Tite Brass Compression Fittings

- Max. pressure: 150 psi
- Temp. range: 0° to 150°F
- Pkg. qty.: 10

Preassembled body, nut, and sleeve allow fast, convenient installation. An exclusive sleeve grips plastic tubing up to 150 psi. Nuts rotate around tubing as it tightens. Acetal copolymer sleeve with brass nut (Nos. 1VPA8 to 1VPB2) resists creeping and compression stress. For use with thermoplastic tubing in pneumatic and liquid applications.

Parker

GA GRAINGER APPROVED

- Temp. range: Parker items are -65° to 200°F; GA items are -65° to 250°F
- Pkg. qty.: 10, except Low-Lead items are pkg. of 1

Eliminate the need to flare, solder, or otherwise prepare tubing before assembly. Use with annealed copper, aluminum, and thermoplastic tubing where excessive vibration or tube movement is not involved. UL Listed for flammable liquids. Meet SAE J-512 functional requirements, except Nos. 20XM26 to 20XM99 and 20XN01 to 20XN22 meet NSF 61 Annex G. Lead-free items are certified for use in potable water applications.

Compress-Align® Brass and Lead-Free Brass Fittings

- **Temp. range: -65° to 200°F**

These heavy-duty fittings align to seal even out-of-round tubing, so tubing does not require flaring, solder, or other preparation. Preassembled brass fittings have captive sleeves. Bodies are interchangeable with standard compression fitting bodies. For low- and medium-pressure tubing connections to copper, brass, aluminum, and thermoplastic tubing. Lead-free items are certified for use in potable water applications.

Pargrip PFA Compression Fittings

- **Temp. range: 0° to 266°F**

Virgin fluoropolymer materials provide highest purity and highest temperature capability of any thermoplastic material. Suitable for high-purity lab and semiconductor applications, especially with aggressive liquids and in highly corrosive environments. Can be easily assembled without hand tools or the need to heat and flare tubing. FDA Approved materials.

CPI™ vs. A-Lok®

CPI: Single-ferrule design creates a dynamic seal on tube and body, with close tolerance of nut and body dimensions for accurate tube alignment.

A-Lok: Have a double-ferrule design that allows the front ferrule to create a pressure seal on tube and body.

316 Stainless Steel Instrumentation Tube Fittings

- Temp. range: -425° to 1200°F

Provide leaktight seals in gas or liquid service. Have a 4:1 safety factor with respect to working pressure capabilities of the tubing used. Compression design allows for easy assembly. Use with 304, 316, or 316L stainless steel tubing. For use in refineries, chemical processing, power generation, and instrument lines.

316 Stainless Steel Metric Instrumentation Tube Fittings

HAM-LET ADVANCED CONTROL TECHNOLOGY

- Temp. range: -425° to 1200°F

LET-LOK® premium fittings are suitable for use in high-pressure applications in heavy industrial environments, such as petrochemical, fluid power, nuclear, and electronic. Meet SAE, ASME, MIL-F-18866, and CE Certified.

LET-LOK® Compression Tube Fittings

HAM-LET ADVANCED CONTROL TECHNOLOGY

- Temp. range: -425° to 1200°F
- Pkg. qty.: 1, except Nos. 31LC03 to 31LC07 are 10 per pkg.

Feature LET-LOK fittings that both seal and grip the tubing for a leak-tight assembly. Fittings are 316 stainless steel construction for corrosion resistance. Suitable for food processing, petrochemical, and pharmaceutical applications. Meet ASME, ASTMA, MIL-F-18866, SAE, and CE Certified.

Brass Instrumentation Tube Fittings

- Temp. range: -40° to 400°F

Provide leaktight seals in gas or liquid service. Designed with 4:1 safety factor with respect to working pressure capabilities of the tubing used. Compression design allows easy assembly. For an explanation of the differences between CPI™ and A-Lok® fittings, see page 2857. For use in refineries, chemical processing, power generation, impulse lines, etc.

Stainless Steel and Brass Instrumentation Ball Valves

Parker

- 6000 psi at 100°F
- Temp. range: -65° to 350°F ("B" Series); -54° to 400°F (Hi-Pro)

Have excellent low-temperature performance and quick ¼-turn On/Off control. Free-floating ball design extends seat life. Packing nut eases inline adjustment. Valves are panel-mountable, with fracture-resistant nylon handles. No. 4EUK3 meets ANSI/ASME B13.34 where applicable.

No. 3ZVP7

Instrumentation Ball Valves

HAM-LET ADVANCED CONTROL TECHNOLOGY

- 1-pc., standard port

300 PSI CWP, FKM SEALS

- Temp. range: -40° to 400°F

Designed for normally closed and quick On/Off service. Moving handle 90° upward locks in open position. Moving handle 90° downward shuts off by spring return.

2000 PSI CWP, PTFE SEALS

- Temp. range: -40° to 400°F

Feature an explosionproof stem. Locking handle models can be locked in both On and Off positions. Tight shutoff and low operating torque.

6000 PSI CWP, PCTFE (KEL-F) SEALS

- Temp. range: -20° to 280°F

On/Off, straight-port valves have a 2-way pattern. 3-way valves can be used for diverter service. Tight shutoff and low operating torque.

Instrumentation Check Valves, "C" Series

- 6000 psi at 115°F
- Cracking pressure: 1 psi
- Max. temp.: 400°F

Designed for unidirectional flow control. Custom-molded seat helps prevent blowouts. Fluorocarbon back-stopped poppet reduces spring stress. Valves offer heat code traceability for material certification. FNPT connections.

Size	Flow gpm @ 60°F w/1000 psig Inlet Press.	L	Item No.

⅜"	7.1	3"	2KLD3
½"	11.2	3 9/16"	2KLD4

Instrumentation Plug Valves

- Max. pressure: 3000 psig CWP
- Temp. range: -10° to 450°F

¼-turn operation, compact, and blowout-resistant seat allows forward flow throttling. Handle indicates flow direction. Pressure rating is reduced to 150 psig when flow is opposite to the indicated direction. Fluorocarbon seats and seals. Compression connections. Meet ASTM A479 Type 316, except Brass meets ASTM B 16 Alloy C36000.

Instrumentation Needle Valves

STAINLESS STEEL, GLOBE-STYLE

- Max. pressure: 6000 psi

A self-centering nonrotating spindle tip provides bubble-tight shutoff; backstop spindle prevents blowout and minimizes atmospheric contamination. PTFE gland packing.

▶GENERAL-PURPOSE

Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals. Tested in accordance with ISA S75.02.

316 Stainless Steel—Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals.

- Max. pressure: 5000 psig CWP

Brass—Packing above the stem thread (PAT) provides bubble-tight shutoff. Cold-formed body threads. Strain-hardened stem threads. PTFE seals.

- Max. pressure: 3000 psig CWP

316 STAINLESS STEEL, HIGH-PURITY

- Max. pressure: 6000 psig CWP

Stem packing below power thread (PBT) prevents stem thread contamination and potential lubricant washout. 2-pc., nonrotating stem prevents stem-to-seat galling. PTFE seals. Meets ASTM A 182 Type F316.

Nickel-Plated Brass Mini Ball Valves and Kits

GRAINGER APPROVED

- Temp. range: -20° to 370°F, except kits are -40° to 350°F

Ideal for use in tight spaces and can be used with air, gas, and liquids. Valve structure is 1-pc. and full port, except ½" are standard port. 450 psi CWP valves have polycarbonate wedge handles and can be panel mounted. 600 psi CWP valves have zinc, wedge handles. Kits Nos. 1PZA7 to 1PZB5 include wedge, lever, and T-style handles. Nos. 38EF92 to 38EF99 are lead free and certified for use with potable water and meet MSS SP-110.

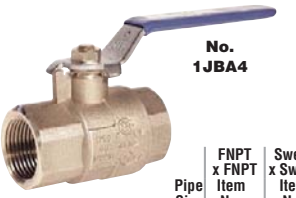
BONOMI NORTH AMERICA, INC.

3-Way Brass Ball Valves—4-Pc.



- Max. pressure: 400 psi CWP
- Max. steam pressure: 100 psi SWP
- Temp. range: -4° to 366°F

Feature 4-ball seats so that any port can be the pressurized inlet. PTFE seats with O-ring backing for low operating torque. Brass body, ball, FNPT connections, and brass blowoutproof stem. For a specific flow pattern, remove the handle and reorient the valve stem to the desired flow path, then reattach the handle. L Port models have a 90° flow pattern with off position. T Port models have a 90° and 180° flow path.

3-Way Brass Ball Valves

GA GRAINGER APPROVED

- Max. pressure: 600 psi CWP
- Max. steam pressure: 100 psi SWP
- Temp. range: -4° to 350°
- FNPT connections

3-way diversion valves with L flow pattern are ideal for tank selection and help simplify fluid transfers. The middle port is common and can divert to the left or right port. 2-pc., standard-port with PTFE seats, FNPT connections, brass body, chrome-plated brass ball and stem, and a steel lever handle with vinyl grip. Blowoutproof stem.

** Chrome-plated brass ball.*

Bronze and Lead-Free Bronze Ball Valves, Full-Port

- Max. pressure: 600 psi CWP; 150 psi SWP
- Temp. range: -20° to 450°F, except Nos. 2EEJ9, 2EEK1 to 2EEK9, and 2EEL3 are 77° to 500°F

2-pc. valves have RPTFE seats and solid-ball design, blowoutproof stem, and adjustable packing gland. Brass ball, except Nos. 2EEJ9 to 2EEL3 are bronze, Nos. 48XJ15 to 48XJ29 are 316 stainless steel. All valves are for use with water, oil, gas, and steam. Meet MSS-SP-110.

Cast-Bronze Ball Valves, Full-Port

- Max. pressure: 600 psi; 150 psi steam
- Temp. range: -20° to 400°F

2-pc. design provides bubble-tight shutoff and features reinforced PTFE seat ring, blowoutproof silicon bronze stem, and high chemical resistance. Valves are suitable for high-pressure applications including compressed air, hot and cold domestic water, HVAC, and low-pressure steam. Meet MSS-SP-110, except Nos. 41E357 to 41E359.

Bronze 3-Pc. Ball Valves, Full-Port

- Max. pressure: 600 psi CWP; 150 psi SWP
- Temp. range: -20° to 450°F

With RPTFE seats and seals. Chrome-plated ball and blowoutproof stem with adjustable packing gland on chevron stem packing. For use with water, oil, gas, and low-pressure steam. Meet MSS-SP-110.

Bronze Ball Valves with Steam Trim

- Max. pressure: 600 psi CWP; 250 psi SWP
- Temp. range: -20° to 500°F

2-pc., standard-port industrial valves have MPTFE seats and a stainless steel ball with vented ball slot to relieve thermal expansion in valve body cavity. With blowoutproof stem, MPTFE stem packing, and adjustable packing gland. FNPT connections. For use with high-pressure water, oil, gas, and steam. Meet MSS-SP-110.

Bronze Ball Valves with SAE and Union Connections

Apollo Valves

- Max. pressure: 600 psi CWP
- Temp. range: -20° to 450°F

With RPTFE seats and blowoutproof stem with adjustable packing gland. Meet MSS-SP-110.

SAE FEMALE

2-pc., full-port valves are machined to accept an O-ring boss connection. Drilled and tapped pad allows easy panel mounting.

FNPT UNION X FNPT BALL VALVE

Pipe union permits quick installation and arrangement changes. Standard-port with Viton® O-ring.

3-Way Bronze Ball Diverter Valves

Apollo Valves

- Max. pressure: 400 psi CWP
- Temp. range: -20° to 450°F

Combine the features of two 2-way valves—larger ports simplify tank selection and fluid transfer. Drilled and tapped for panel mounting. L-port with RPTFE seats and blowoutproof stem with adjustable packing gland. FNPT connections. Meet MSS-SP-110.

Apollo Valves

Bronze Ball Valves with Auto Drain

- Max. pressure: 600 psi CWP, 150 psi SWP
- Temp. range: -20° to 450°F, except Pad Locking Lever models are 50° to 200°F

Standard-port valves have 2-pc. B584 bronze body with B16 brass retainer and RPTFE reinforced seats. Blowoutproof stem design with adjustable packing gland and automatic drain. Handle is zinc-plated steel. FNPT connections. Meet MSS SP-110 and ASTM B16, except Nos. 5LXU0 to 5LXU7 only meet ASTM B16.

"Apollo" Valves

316 Stainless Steel Ball Valves

- Rated: 2000 psi CWP up to 1"; 1500 psi CWP 1¼" and up; 150 psi SWP
- Temp. range: -50° to 450°F

Valves with investment-cast stainless steel components meet the most demanding industrial applications. Integral mounting pad with drilled and tapped holes, locking handles, and blowoutproof stem with adjustable packing gland. 2-pc., standard port valves with RPTFE seats, and FNPT connections. Vacuum service to 29" Hg. For use with water, oil, gas, and low-pressure steam in most corrosive industrial environments. Meet MSS-SP-110.

True Union and PVC Ball Valves

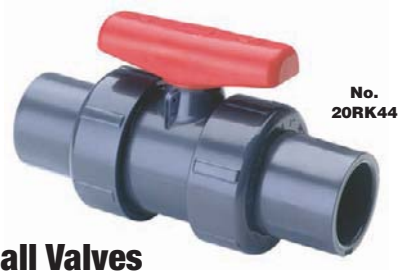
ASAHI/AMERICA®

Typically used in on/off applications and with clean fluids with very little or no suspended solids. Suitable for use in chemical processing, mining, pool, power plant, transportation, and water treatment applications. Find more Asahi® Ball Valves at Grainger.com®. NSF-61 Approved.

COMPACT TYPE 27

Omni® ball valve has a unibody construction, low-profile design with ¼-turn handle, hyperbolic flow characteristics, low pressure drop, and reliable sealing.

Compact



TRUE UNION DESIGN TYPE 21

Tapered O-ring grooves help keep the end connector O-rings in place during installation. The PTFE seat design eases field maintenance if needed. Flats on either side of the valve body allow you to keep the body from turning when the union nuts are tightened.

True Union PVC and CPVC Ball Valves with Locking Handle

- Max. pressure: 235 psi at 73°F
- Temp. range: 73° to 140°F

Compact, ¼-turn shutoff valves are for industrial and chemical processing applications. Full-port style with PTFE seats and locking polypropylene handles. ASTM F 1970 and NSF Approved.

Type 546 True Union Ball Valves

No. 2KE46

- Max. pressure: 232 psi at 73°F

2-way full-port valves can be radial installed and feature a breakaway stem. Can be used with Schedule 80 pipe and fittings. Valves can be actuated, and handle has a molded-in wrench for access to valve components. With chemical-resistant EPDM or FPM seals. Union connections. For use in the chemical industry and in swimming pool, aquarium, wastewater, and other corrosive applications. Polypropylene meet ASTM D 4101; PVC and CPVC meet ASTM 1970-01, ASTM D1784, USP Class VI, FDA, NSF 61.

HAYWARD

TBZ Series Industrial True Union PVC and CPVC Z-Ball Valves

Ideal for sodium hypochlorite service, these valves feature a drilled ball for venting gases and keep inner valve surfaces wetted. Black handle acts as an identifier. FPM seals only with PTFE seats and double O-ring stem seal. Nos. 466J56 to 466J79 feature a lock-out/tag-out plate that can accommodate up to 4 locks. All models meet NSF and ASTM, except Nos. 466J56 to 466J79 meet NSF/ANSI 61.

1-Pc. and 3-Pc. Polypropylene Bolted Ball Valves

Fiberglass-reinforced bolted valves for heavy-duty industrial applications. PTFE seats allow free movement of self-aligning, diamond-tuned polypropylene ball for precise alignment. Self-lubricating PTFE stem, bushings, and ball seats won't stick or bind. With FKM seals. FNPT connections. For use in fluid-handling applications with fertilizer, herbicides, and insecticides, as well as with industrial acids, solvents, liquid waste, wastewater, and cooling water.

Actuated Ball Valves

DynaQuip

- Valve temp. range: -20° to 400°F

Compact, direct-mount valves provide accurate alignment. Anticorrosive coating. RTFE seats. 3-way models are ideal for diverter-type applications; 3-pc. models permit easy in-line maintenance. All valves have NEMA 4X enclosures.

PNEUMATIC
- Actuator inlet pressure: 80 psi or greater
- Actuator temp. range: -4° to 176°F

Excellent for continuous rapid cycling or hazardous conditions. Hard anodized aluminum housing. Integral 120VAC, 60 Hz, NAMUR-mount solenoid with three ¼" NPT ports.

ELECTRONIC
- Actuator temp. range: -15° to 140°F

Feature reversible motors, terminal strip, manual override, and a hardened precision gear train. ½" to 2" can be wired in parallel. 50% duty cycle. 3" have 2 extra SPDT limit switches, 30% duty cycle. General cycle times: 2½ sec. for ½" to 1"; 6½ to 15 sec. for 2"; 15 to 22 sec. for 3". The 12-24VAC/VDC models do not have a manual override.

SOLENOID AIR CONTROL VALVES

Standard NAMUR direct-mounted pilot solenoids can provide electronic control of the inlet air. Solenoids efficiently pressurize and exhaust the pneumatic actuator piston compartments allowing the actuator to cycle.

3-Way General-Purpose Solenoid Valves

No. 2A194

- Max. fluid temp.: 180°F
- Buna N gaskets
- Mount in any position

Direct-acting valves are intended for air and water applications. All have 3 ports and 2 orifices that alternate between applying pressure to and exhausting pressure from actuators and cylinders. Rated for continuous duty. Meet Fluid Control Institute, Inc. and National Fluid Power Association (NFPA) standards. UL Listed and CSA Certified.

WARNING: Not for use in explosive atmospheres.

† Coefficient of Volume: the amount of water in gpm at standard connections (60°F, specific gravity = 1) which will pass through the valve with a 1 psi pressure drop and the valve in the full-open position.

BANJO

Electrically Actuated Polypropylene Ball Valves

- Max. pressure: 150 psi CWP
- Temp. range: 0° to 150°F

3-pc. valves have self-lubricating PTFE seats, EPDM seals, and 316 stainless steel ball, stem, and valve hardware. Include open/closed valve indicator. Chemical-resistant construction makes these valves ideal for fertilizer, herbicide, and insecticide handling, as well as for chemical and acid handling in many industrial, pulp and paper, and process applications. FNPT connections.

Solenoid Valves and Valve Coils

Solenoid Valve
No. 1A576

Solenoid Valves—Feature 2-way design and have Buna N gaskets (do not exceed temperature limitations). To prevent backflow, add a check valve to the system (sold separately on page 2900). Valves that have OPD minimums beginning with 0 (e.g., 0 to 300 psi) are direct-acting and will open and close when line pressures are within minimum and maximum psi ranges. Valves that have OPD minimums starting at 2 or 5 (e.g., 5 to 150 psi) are designated pilot-operated and will open and close only if pressure differential between the inlet and outlet is within OPD ranges. Normally closed valves will open when energized. Normally open valves will close when energized. Meet Fluid Control Institute, Inc. and National Fluid Power Association (NFPA) standards. UL Listed and CSA Certified.

- Max. fluid temp.: 180°F
- Mount in any position

WARNING: Not for use in hazardous atmospheres.

Note: Maximum suggested cycling rate is 10 times per min.

Solenoid Valve Coils—For use with Dayton® solenoid valves on this page only. Continuous duty coils, for Class F, H, and B insulation with NEMA coil enclosure. Coils and valves, when assembled, are UL Listed. For steam valves, use Class H coil. 12 and 24VDC coils have integral pulse modulation circuit for the same OPD ratings as AC coils. CSA Certified, except Nos. 3PU19 and 3PU18 are UL Listed only.

WARNING: Not for use in hazardous atmospheres.

*† Coefficient of Volume (Cv): the amount of water in gpm at standard connections (60°F, specific gravity = 1) which will pass through the valve with a 1 psi pressure drop and the valve in the full-open position. * OPD—Operating Pressure Differential. **NEMA Class F (311°F), Class H (356°F), Class B (266°F).*

Solenoid Valve Rebuild Kits

Dayton®

Replacement parts for Dayton® solenoid valves. All come with plunger assembly, gasket, spring, and instructions. See Grainger.com® for a complete listing of kit contents.

2- and 3-Way General-Purpose Solenoid Valves

1-pc. molded epoxy coil enclosures have built-in ½" NPT conduit hubs with strain relief. For information on standards, go to Grainger.com®.

2-Way—Use high-flow valves for liquid, corrosive, and air/inert gas service applications, including car washes, air compressors, pumps, laundry equipment, and industrial water control.

3-Way—Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from valve actuators and single-acting cylinders.

2-Way Normally Closed Dust Collector Solenoid Valves

High-flow aluminum valves use a powerful pulse of air to separate dust and particulate from filters and bags. NBR gasket. Remote pilot valves require separate solenoid valves. Integral pilot valves feature watertight type molded epoxy solenoid coils with ½" conduit hub. Coil included. Valves have NPT pipe connections (except No. 5LU48 is compression connection).

Low-Pressure Normally Closed and Normally Open Solenoid Valves

ASCO Red-Hat

- Brass body with NBR gasket

Ideal for dispensing, collating, gas shutoff, vacuum holding, and tank draining. Normally open valves operate at low pressures with no minimum required; well suited for venting systems. Coil included. CSA and CE Certified; except No. 4EKU3 is FM Approved, UL Recognized, and CSA Certified.

12VDC, 24VAC, and 240VAC General-Purpose Solenoid Valves

ASCO
Red-Hat®

1-pc. molded epoxy coil enclosures have built-in ½" NPT conduit hubs with strain relief. Normally open valves close when energized. Normally closed valves open when energized.

2-WAY

High-flow valves for liquid, corrosive, and air/inert gas service in applications such as car washes, air compressors, pumps, laundry equipment, and industrial water control.

3-WAY

Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from valve actuators and single-acting cylinders.

3-WAY UNIVERSAL

Can connect as either normally open or normally closed to select or direct fluids to different ports.

ASCO Red-Hat®

2-, 3-, and 4-Way Intrinsically-Safe Solenoid Valves

- Coil insulation class: F, except Nos. 44U332, 6WTV8, and 4EMC9 are class H

Coil enclosures have a built-in ½" NPT conduit hub with strain relief. Designed to contain internal explosions without causing an external hazard for Type 7 Class 1, Division 1 and 2, Groups A, B, C, and D gases or vapors. Type 9 Class 2, Division 1 and 2, Groups E, F, and G. Normally closed valves close when de-energized. Normally open valves open when de-energized.

2-WAY

Provide high-flow levels for liquid, corrosive, and air/inert gas service.

3-WAY

Have 3 pipe connections and 2 orifices that alternately apply pressure to and exhaust pressure from a valve actuator or single-acting cylinder. For Quick-Exhaust/Universal models air is exhausted through the exhaust orifice to quickly shift control valves to 0 psi.

4-WAY

Have 4 pipe connections, 1 pressure inlet, and 2 cylinder ports that provide pressure to a double-acting cylinder or actuator. A single outlet exhausts pressure from the cylinders.

ASCO™ Red-Hat®

2-Way Combustion Shut-Off Valves

- Coil insulation class: F

Typical combustible media include natural gas and oil.

Note: Units with Mfr. Models starting with JB have a junction box connection. Mfr. Models starting with SC are DIN connection.

AIR AND FUEL GAS SOLENOID

Lightweight, provide high flow, and ideal for low pressure applications.

FUEL GAS SOLENOID

For control of commercial and industrial gas burners; mount in any position.

FUEL GAS SOLENOID WITH TEST PORT

For control of commercial and industrial gas burners. ⅛" NPT downstream pipe tap with plug for testing.

FUEL OIL SOLENOID

Combustion valves are for the control of both light and heavy oils.

ASCO Red-Hat
2-Way Cryogenic Solenoid Valves

- NEMA rating: 1, 2, 3, 3S, 4, 4X

Normally closed valves are specifically designed to handle cryogenic fluids, including liquid nitrogen, liquid argon, and liquid oxygen. All are degreased, cleaned, tested free of moisture, and blacklight tested for hydrocarbons. Coil included. For use in frozen food and cranial/genetic preservation applications. CSA and CE Certified.

2- and 3-Way Next Generation Solenoid Valves

ASCO™ Red-Hat®

- Max. fluid temp.: 180°F
- Coil insulation class: H
- Seal material: NBR

Can accept both AC and DC voltages; increase DC pressure ratings to AC levels. Feature lower power operation, voltage ranging, and built-in surge suppression. Design helps eliminate AC hum. Coil included.

3-Way Quick Exhaust Solenoid Valves

- Brass body
- Seal material: NBR

Have 3 pipe connections and 2 orifices. Coil included. UL Listed and CSA Certified.

Normally Closed—When the valve is de-energized, the pressure port is closed and the exhaust port is connected to the cylinder port. When the valve is energized, the exhaust port is closed and the pressure port is connected to the cylinder port.

Normally Open—When the valve is de-energized, the pressure port is connected to the cylinder port and the exhaust port is closed. When the valve is energized, the pressure port is closed and the cylinder port is connected to the exhaust port.

ASCO™ Red-Hat®

Universal—Can be connected in either Normally Closed or Normally Open position. Can also be used to select 1 of 2 fluids, or to divert flow from 1 port to another.

ASCO Red-Hat®

Lead-Free, 2-Way Normally Closed Solenoid Valves

- Max.fluid temp.: 180°F
- NEMA rating: 4X

These durable solenoid valves feature a brass body and a rugged design that provides long life and low internal leakage. This normally closed, 2-way valve has 1 inlet and 1 outlet pipe connection and is closed when de-energized and open when energized. Suitable for use with air, inert gas, light oil, and potable water.

Note: See Mfr. Model number for voltage that applies to each solenoid valve.

PLAST-O-MATIC VALVES, INC.

PVC and Polypropylene Solenoid Valves

- Max. fluid temp: 140°F PVC, 180°F polypropylene

Feature an innovative Fail Dry® design that provides a visual warning of seal malfunction. Bellows barrier-type dynamic seal helps prevent fugitive emissions from leaking. Rugged thermoplastic body resists corrosion and has no wetted metal parts. Valves are 2-way and 3-way with spring return. Normally closed and direct-acting with a push-pull plunger design. Can handle pressure drain or vacuum applications (3-way pressure only), without pressure to aid in opening the valve. Pilot-operated valves require a minimum differential of 5 psi. For use in severe service applications with most liquids, including acids, caustics, chlorine solutions, solvents, and ultra-pure fluids. Use with Replacement Solenoid Valve Coils Nos. 11K485 to 11K492, sold separately on Grainger.com®.

HAYWARD

SV Series True-Union PVC and CPVC Solenoid Valves

- 120VAC
- Max. pressure: 120 psi
- Max. flow: 5 fps

Socket/threaded connection operates with no pressure differential; made for operation in harsh, corrosive conditions. Easy-to-replace seal cartridge and plunger assemblies allow quick field repair. Normally closed.

No. 3CDZ4

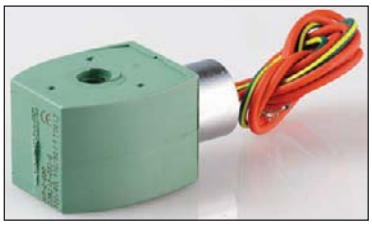
SPENCE

Pneumatic Actuated Globe Control Valves



- Max. steam pressure: 250 SWP
- Temp. range: 0° to 400°F
- 2-pc.; stainless steel seats

Globe-style, severe-duty, high-capacity spring return valves work off increasing 20 psig max. control signal. Valves come with a pneumatic actuator and operate fail-close, air-to-open. Bronze construction and FNPT connection. Use for heating or cooling with air, steam, water, and other liquids. Meet ANSI B16.15 Class 250 or ANSI B16.1 Class 125.

Cast- and Ductile-Iron Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 200 psi
- Buna liner temp. range: 10° to 180°F
- EPDM liner temp. range: -30° to 250°F
- Viton® liner temp. range: -20° to 300°F

For commercial mechanical and industrial processes, including hot and cold domestic water, HVAC, condenser and chilled water, and compressed air and vacuum services. Meet MSS-SP67, MSS-SP25, and API-609, except Low-Lead models only meet MSS SP-67, API-609.

Cast-Iron—Heavy-duty, low-torque valves are dead-end service rated at 150 psi; 200 psi for Buna and EPDM lug style.

Ductile-Iron—High tensile and yield strength with positive shutoff. Bidirectional service to 200 psi max.

No. 5MPC5

Electric Actuated 115 VAC
No. 1WDX1

Pneumatic Actuated
No. 1WDX8

Cast- and Ductile-Iron Actuated Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 200 psi CWP
- Temp. range: -20° to 250°F
- EPDM seats and liner, aluminum bronze disc
- Lug style

Use for industrial and domestic applications, including hot and cold domestic water, HVAC, condenser and chilled water, compressed air, and vacuum service. Compatible with ANSI Class 125 and 150 flanges. Electrically actuated 115VAC valves have a reversing motor that requires 50/60 Hz and include a switch that indicates whether the valve is open or closed. Close mount. Can be bolted directly to a single flange piping system. Pneumatic-actuated valves require a 80 psi air supply. Double-acting valves require air to open and close; spring-return valves only require air to open.

Pipe Size	Bolt Circle Dia.	Lug Dia.	No. of Bolt Holes	115 VAC Item No.	Pneumatically Actuated, Double Acting Item No.	Pneumatically Actuated, Spring Return Item No.

ASAHI/AMERICA®

PVC and CPVC Butterfly Valves

Feature a spherical disc design for greater durability and improved Cv, while the full seat construction helps isolate the body and stem from the media and acts as mating flange gaskets. All gear handles come with a Plasgear™ operator designed with composite plastic and a black urethane coating for rust and corrosion resistance even when exposed to harsh chemicals.

Carbon Steel Butterfly Valves

MILWAUKEE VALVE

- Max. pressure: 285 psi
- Max. steam rating: 150 psi
- Temp. range: -20° to 400°F
- RPTFE liner material
- 316 stainless steel disc material

Use in throttling and positive shutoff applications, with hot water, cold water, and steam. A redundant seal prevents seat from being drawn into the flow stream, especially under high-velocity conditions. Bidirectional, with double dead-end service. Mount in any position. Stainless steel spring. Meet MSS SP-68, ANSI B16.34, and API 609.

PVC Butterfly Valves—Type-57P

ASAHI/AMERICA®

- Max. water pressure: 150 psi
- Temp. range: 30° to 175°F
- EPDM liner material
- Polypropylene disc material
- Wafer style

Feature a PVC body and polypropylene disc for high chemical resistance and non-wetted 316 stainless steel shaft for long life. The spherical disc design helps provide increased Cv, maximum sealing, and a high cycle life. Molded body stops and a seat stress relief area help prevent seat overtightening. Self gasketing, no additional gasket required. Meet ASTM D1784 Cell Class 12454A and NSF 61 Certified. Find Asahi® Flange Gaskets at Grainger.com®.

PVC Butterfly Valves—BYCS Series

HAYWARD

- Max. pressure: 150 psi
- Temp. range: 40° to 140°F
- EPDM liner material
- PVC disc material
- Wafer style

PVC construction, 1-pc. body. Fully supported flanged bolt holes help prevent stressing on mating flanges. Blowoutproof, 410 stainless steel stem and full body liner with integrally molded face seal eliminates need for additional gaskets. Lever handle with lockout.

PVC and CPVC Butterfly Valves—BYV Series

HAYWARD

- Max. water pressure: 150 psi
- Temp. range: 32° to 140°F (PVC Body); 32° to 190°F (CPVC Body)

Feature a 1-pc. body and 1-pc. 316 SS stem with threaded retaining gland. Optional 316 SS lugs can be molded into the body for added strength. Lever models have 19 lockable stop positions, and 360° Interlock with Cv and percentage open indicators. For a complete list of standards and specifications, go to Grainger.com® and search for individual products. For glass-filled valves go to Grainger.com® and search for glass filled polypropylene butterfly valves.

Forged Carbon Steel Gate Valves

GRAINGER APPROVED

- Max. pressure: 1460 psi steam; 1975 psi CWP
- Max. temp.: 850°F

Class 800 valves withstand high pressures and temperatures. Carbon steel body construction with 410 stainless steel rising stem and wedge, and carbon steel handwheel. With outside screw and yoke and bolted bonnet. Meet API 602, BS 5352, ASTM A105, and NACE MR-0175.

Stainless Steel Gate Valves

GRAINGER APPROVED

Ideal for refinery, chemical, and other process applications.

CLASS 150 FLANGED
- Max. pressure: 150 psi steam; 275 psi CWP
- Max. temp.: 450°F

Corrosion-resistant valves feature a flexible gate to assure proper placement; valves can absorb pipe stress without leaking. Rising stem is 316 stainless steel; handwheel is cast-iron. With bolted bonnet and outside screw and yoke. Meet API 603 and ASTMA-351.

CLASS 200
- Max. pressure: 200 psi CWP
- Max. temp.: 365°F

Corrosion-resistant construction with 316 stainless steel nonrising stem, bonnet, body, and wedge. Aluminum handwheels.

CLASS 800
- Max. pressure: 1225 psi steam; 1600 psi CWP
- Max. temp.: 850°F

Forged 316L stainless steel bonnet and body provide excellent corrosion resistance and withstand high pressures and temperatures. Rising stem and wedge are 316 stainless steel; carbon steel handwheel. Feature outside screw and yoke and bolted bonnet. Meet API 602 and ASTM A182.

Aluminum and Cast- and Ductile-Iron Flanged Gate Valves

MILWAUKEE VALVE · NIBCO · WATTS REGULATOR

MILWAUKEE, NO. 4HCK7
- Double disc
- Bronze stem and wedge; aluminum handwheel

Meets TTMA and conforms to MIL-V-58039 Type 1.

MILWAUKEE, CLASS 125
- Cast-iron bonnet, wedge, and handwheel

Meet MSS SP-70.

NIBCO, CLASS 125
- Ductile-iron bonnet, wedge, and handwheel

Low-lead and certified for use in potable water applications. Meet AWWA C509.

WATTS, CLASS 200
- Cast-iron bonnet, wedge, and handwheel

Suitable for throttling. Meet ASTM A126 Class B Iron, AWWA 509, FM, and MSS-SP-70. UL and C-UL Listed.

WATTS, CLASS 250
- Cast-iron bonnet, wedge, and handwheel

Epoxy-coated valve is used in fire protection applications. Suitable for throttling. Meet ASTM A126 Class B Iron, AWWA 509, FM, and MSS-SP-70. UL and C-UL Listed.

Bronze Globe Valves

▪ Rising stems ▪ Malleable iron handwheels

MILWAUKEE VALVE

For use in HVAC and other general commercial and industrial utility applications with hot and cold water, steam, compressed air, and gas. Class 125 WOG has threaded bonnet, Classes 150 SWP and 300 WOG have union bonnet. All valves meet MSS SP-80. Body, screw-in and union bonnet, seat disc, disc holder, packing gland, and nut meet ASTM B-62.

CHECK VALVES

VALTERRA®

▪ Max. water pressure: 150 psi, except No. 35ZY65 is 75 psi
▪ Max. temp.: 73°F

Provide quiet operation and combine the benefits of a spring and a swing check valve. The full-flow design eliminates the restriction of a spring center poppet and allows up to 15% more flow than comparable spring check valves. PVC construction with 316 SS spring. White color, except where indicated in the table.

- Max. pressure: 100 psi
- Max. temp.: 212°F

Designed to fill boiler and system piping with water and to maintain water pressure in the system. An innovative push-button fast fill engagement with auto-stop helps prevents over-pressurizing the system. Dial indicator eliminates need for pressure gauge.

LEAD-FREE BRASS

- Max. pressure: 300 psi
- Max. temp.: 140°F

Certified for use in potable water applications.

THERMOPLASTIC

- Max. pressure: 300 psi
- Max. temp.: 150°F

Use in OEM irrigation and industrial applications that require a constant downstream flow. Corrosion-resistant, molded plastic body with 300 Series stainless steel and food-grade rubber internal components.

SPENCE

Pressure Regulators

- Cast-iron body
- FNPT connections, except Nos. 49AC45 to 49AC76 are flanged

PRESSURE REGULATORS

- Max. pressure: 250 psi
- Max. temp.: 450°F

For use in steam distribution and pressure control in district heating systems and steam plants. Suitable for single point or multiple use applications and can be used in single-stage, 2-stage, and parallel reductions. Nos. 49AC45 to 49AC60 are Class 125, Nos. 49AC61 to 49AC76 are Class 250. All models meet ANSI/FCI 70-2 Class IV shutoff, FCI 70-3 Class VI shutoff, ASME/ANSI B16.1.

PILOT-OPERATED

- Max. pressure: 250 psi
- Max. temp.: 450°F

Self-contained for steam line control within ±1 psig of set pressure under varying load conditions. Fitting a sensing line (not included) allows pilot to sense downstream pressure changes and quickly adjust to meet steam demand. All stainless steel internals. Meet ASME B16.1 with ANSI Class 4 seat tightness.

Self-Contained Temperature Regulators

SPENCE

Self-operated, 2-way regulators control temperature of water, steam, or other liquid systems without electricity. Thermal system assembly with gauge, 8" bronze capillary. 1" NPT male union bushing. Adjusting screw and calibration scale allow easy setting. Bronze construction with steel springs and seats. Direct-acting valves are used for heating and are normally open; reverse-acting valves are used for cooling and are normally closed. Galvanized FNPT union end connections. Suitable for heat exchangers, kettles, building heat, bottle-washing machinery, plating tanks, heating ducts, cooking vats, and parts washers.

REPLACEMENT THERMOWELLS

- Inlet connection: 1" MNPT
- Max. pressure: 250 psi
- Max. temp.: -25° to 400°F

Allow for removal of temperature probe without having to drain contents from tank.

No. 1RXL5

No.3EJJ6

WATTS REGULATOR

Lead-Free Pressure-Reducing Valves—25 AUB Series

No. 5DMA4

- Max. pressure: 300 psi
- Max. temp.: 160°F

Union inlet connection, integral stainless steel strainer, and temp.-resistant reinforced EPDM diaphragm for hot water. Certified for use in potable water applications. All meet ASSE 1003, CSA B356, and are IAPMO Listed, except No. 26X116 is IAPMO Listed only. Nos. 5DMA4 to 5DMA9, 5DMC0, and 26X116 meet Southern Plumbing Code and Mil. Spec. MIL-V-18146B Type I, except No. 26X116 meets the Mil. Spec. only. Nos. 5DMA4 to 5DMA8 meet CSA B356, Southern Plumbing Code, and Mil. Spec. MIL-V-18146B Type I. Nos. 5DMA4 to 5DMC0 and 26X116 meet ANSI A112.26.

WATTS REGULATOR

Apollo Valves

High- and Super-Capacity Water Pressure-Reducing Valves

- Adjustable range: 25 to 75 PSI
- Preset pressure: 50 psi

Feature an enlarged diaphragm and orifice and a spring cage to handle high capacities. FNPT connections. Lead-Free valves are certified for use in potable water applications.

APOLLO, SUPER-CAPACITY

- Max. inlet pressure: 400 psi
- Max. temp.: 180°F

With built-in thermal expansion bypass, adjusting screws, nut, cap bolts, and easy access for maintenance/repair. Meet ASSE 1003, ANSI A112.26.2, CSA B356, and IAPMO.

APOLLO, SUPER-CAPACITY LEAD FREE

- Max. pressure: 400 psi
- Max. temp.: 180°F

Use to reduce incoming water pressure to help protect plumbing system components and reduce water consumption. Feature built-in thermal expansion bypass. Meet ASSE 1003, CSA B356, and NSF/ANSI 372.

Lead-Free, High-Capacity Water Pressure-Reducing Valves—U5B/127W Series

- Max. pressure: 300 psi

U5B Series—All have stainless steel strainer (except Nos. 25CC94 and 25CC95), and built-in thermal expansion bypass with check valve. Lead-free brass construction. Certified for use in potable water applications and meet CSA B356 and ASSE 1003. All models are IAPMO Listed, except No. 26X115. Meet Southern Standard Plumbing Code, except Nos. 25CC94, 25CC95, and 26X115. Meet ANSI A112.26, except Nos. 25CC94 and 25CC95.

127W Series—Feature a high temperature-resisting diaphragm, interchangeable diaphragm chamber, and replaceable stainless steel seat and stem. Lead-free iron construction, except No. 36JA73 is lead-free copper silicon alloy.

WATTS

Pressure Regulators

Provide a highly sensitive response to reduced pressure changes and can maintain fullest possible volume without appreciable reduced pressure drop. Allow in-line service and feature a sensitivity adjuster that helps eliminate vibrating conditions. Stainless steel seat and disc. FNPT connections. Ideal for use on autoclaves, oil lines, process lines, single radiators, sterilizers, steam tables, and vulcanizers.

PROCESS STEAM PRESSURE REGULATORS

- Max. pressure: 200 psi
- Max. temp.: 300°F

For steam or liquid applications. Iron body.

STEAM PRESSURE REGULATORS

- Max. pressure: 300 psi
- Max. temp.: 420°F

For steam or liquid applications. Stainless steel body.

Lead-Free Bronze Water Pressure-Reducing Valves

- Max. pressure: 300 psi, except Nos. 40D776 to 40D792 are 400 psi
- Preset pressure settings: 50 psi, except for No. 49EL62
- Max. temp.: 140°F, except Nos. 40D776 to 40D831, 49EL62 are 180°F

Feature a balanced piston design that allows valves to react in a smooth and responsive manner to changes in system flow demand, while also controlling inlet pressure changes. Nos. 22N570 to 22N575 have a direct-acting bypass design to help prevent excessive pressure buildup caused by thermal expansion. Include a bypass check valve. All valves have a high-flow capacity and are suitable for use in industrial water lines and commercial irrigation systems. Find Repair Kit contents at Grainger.com®. Certified for use in potable water applications. For a complete list of standards and specifications, go to Grainger.com® and search for individual products.

T&P Valves

- Max. temp.: 210°F

Provide automatic temperature and pressure protection for hot water heaters and supply tanks. Test lever allows pressure checks during operation. ASME rated, CSA Certified, and meet ANSI Z21.22.

STANDARD SHANK
No. 4P947 meets FHA requirements and Mil. Spec. MIL-V-136-12D, Type 1.

EXTENDED SHANK
Use with water heaters containing thick insulation.

Standard Shank No. 2XLA3 | Extended Shank No. 3EEX3

Boiler Feed Valves

- Max. pressure: 100 psi
- Adjustable pressure range: 10 to 25 psi
- Max. temp.: 212°F

Cast-iron valves permit rapid system fill and sustained air purge flow. With strainer screen. Factory set at 15 psi. Nos. 46A967 and 46A968 feature a backflow preventer.

No. 3A558 | No. 46A968

ASME Section IV Steam Low-Pressure Safety Relief Valves

- Pressure range: 5 to 15 psi; factory preset to 15 psi
- Max. temp.: 250°F

High-capacity valves for medium- and large-size heating boilers. Cast-bronze construction and MNPT x FNPT connections. ⅜" NPT side tapping for drain connection. Suitable for industrial and commercial applications. Meet ASME Section IV, CSA, and CRN.

No. 1CKX9

Safety Relief Valves

Nonmechanical seat-to-disc alignment. FNPT connections, except No. 46A979 is union solder connection.

FILL AND RELIEF
- Max. water pressure: 100 psi
- Max. temp.: 212°F

Fully adjustable from 10 to 25 lb. Include strainer screen. Cast-iron body, painted bronze.

SAFETY RELIEF
- Max. temp.: 250°F

Drain seal eliminates water trapping and sediment fouling. Heat-resistant diaphragm isolates springs and working parts from water during release. Brass springs, Buna N disc.

174A Series—Meet Mil. Spec. MIL-V-136-RD, Type III, as well as ASME, NB, and HV, except Nos. 26X179 to 26X195 meet ASME Section IV only.

374A Series—Forged bronze inlet. Meet Mil. Spec. MIL-V-18634B, Type I, Class 3A, Style A, Bronze Body, as well as ASME.

740A Series—Expanded outlets. Meet Mil. Spec. MIL-V-18634B, Type I, Class 3A, Style A, Bronze Body, as well as ASME, except Nos. 26X150 to 26X157, 26X160, and 26X161 meet ASME Section IV only.

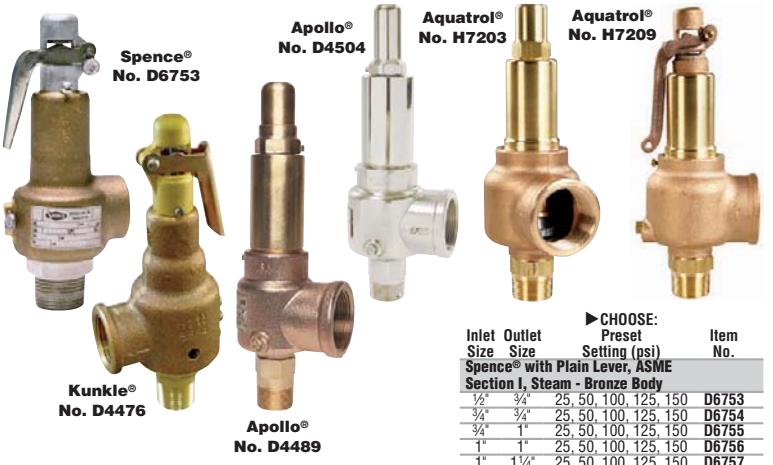
ASME Section IV Safety Relief Valves



- Pressure range: 15 to 160 psig
- Max. temp.: 250°F

Protect against excessive water pressure due to failure of controls to regulate BTU input. High BTU capacity rating. Bronze body and cover. Corrosion-resistant with silicone seat. Fabric reinforced, molded diaphragm isolates spring from water at all times. FNPT connections. Designed for boilers, heating systems, and unfired pressure vessels. Meet ASME Section IV, CSA, and CRN.

No. 1CKV5

SPENCE KUNKLE Apollo Valves Aquatrol

ASME Section I Steam and Section VIII POP Safety Relief Valves

Valves are factory preset and sealed to prevent tampering. Not adjustable. MNPT x FNPT connections.

Note: For ASME Certified valves custom set to other pressure settings, call 1-800-GRAINGER (472-4643).

SPENCE®

- Temp. range: 0° to 406°F

Dual ring control for dependable pop action and seat tightness. Plain lever for valve testing. Protect against overpressure in steam boilers, pressure reducing stations, and air compressors. ASME Section I for use with steam boilers and steam systems. ASME Section VIII for use with air and nonhazardous gas.

KUNKLE®

- Temp. range: -60° to 406°F

Pivot between disc and spring helps correct misalignment. ASME Section I has ethylene propylene seals; ASME Section VIII has Viton® seals. For air/gas compressors, steam boilers, and generators.

APOLLO®

- Temp. range: -320° to 800°F (stainless steel), -320° to 406°F (bronze)

Full-nozzle design can be used in closed systems. Metal-to-metal seating. Ideal for pressure vessels and pressure piping systems. Packed lever allows manual operation/testing as required by ASME code for steam, air, and hot water above 140°F service. Screwed cap are not for use with air, steam, or water above 140°F, where a packed lever must be used.

AQUATROL®, ASME SECTION VIII

- Temp. range: -320°F to 406°F

High-capacity, multipurpose valves with a dual lapped disc for improved seating tightness. Stainless steel disc and spring.

Apollo Valves KUNKLE WATTS REGULATOR

Low-Pressure Steam Heating Boiler Safety Relief Valves

- Max. temp.: 250°F

All have top guiding seals and positive condensate drainage for extended service life. Cast-bronze construction, except Kunkle models are cast iron. Raised EPDM discs and seats; except Kunkle valves have bronze discs and brass seats, Watts valves have PTFE discs and metal seats. All have stainless steel springs except Kunkle models are steel. MNPT x FNPT connections. Nos. 3EEY1, 3EEY6, and 3EEY7 have MNPT bottom connection and top outlet discharge.

Aquatrol

ASME Section VIII Air and Inert Gas Safety Relief Valves

- Pressure range: 0 to 250 psig
- Max. temp.: 406°F

Bronze valves have bronze discs, stainless steel springs, and precision lapped bronze seats. Single-ring blowdown assures quick, accurate reseating when opening/popping. MNPT x FNPT connections. For use in air compressors, pressurized production lines, and tanks. Series 88 models feature valve handle that allows field testing and simple cleanout. Series 89 models include sealed and closed hex cap.

Note: Valves are factory preset and sealed to prevent tampering. Not adjustable.

Hot Water Relief Valves

- Pressure range: 75 to 150 psi
- Max. temp.: 250°F, except Nos. 2XLA7, 31LH29, and 49EL60 are 210°F

No. 2XLA7

Fully automatic valves reseat themselves after relieving pressure. Cast bronze construction with stainless steel springs, except No. 31LH30 has a brass body. MNPT x FNPT connections. For tankless or closed-loop hot water systems. ASME Section IV Certified, except, No. 49EL60 meets ANSI Z21.22 and is CSA 4.4 Certified.

Series 69 Relief Valves

Aquatrol VALVE COMPANY, INC.

- Max. temp.: 450°F

No. D4547

Field-adjustable pressure is factory set to midrange for minimal effect on flow capacity rates. Adjustment requires no disassembly; simply remove hex cap. Closed bonnet, sealed hex cap, and lapped metal seating eliminate leakage. Stainless steel springs. MNPT x FNPT connections. For pressure relief, liquid relief, continuous bypass, and overprotection for pumping stations, tanks, hydraulics, fluid, and pipelines.

WATTS REGULATOR | Aquatrol VALVE COMPANY, INC. | CASH ACME OVERBUILT IS AN UNDERSTATEMENT.

No. 5DLZ1

Calibrated Pressure and Vacuum Relief Valves

Calibrated pressure and vacuum relief have a brass body and stainless steel spring. Lead-free valves are certified for use in potable water applications. Liquid relief valves are bronze and have metal-to-metal seat.

CALIBRATED PRESSURE, SERIES 530

- Pressure range: 50 to 175 psi
- Temp. range: 0° to 180°F

Protect against excessive pressure buildup in systems that contain water, oil, or air. Use for bypass thermal relief. Buna N disc. Lead-free, except No. 2X318. NSF Listed and FDA Approved, except No. 2X318 meets ANSI Z21.22.

Note: Not to be used as an operating control.

LEAD-FREE VACUUM RELIEF, SERIES N36

- Max. pressure: 15 psi steam; 200 psi water
- Temp. range: 0° to 250°F

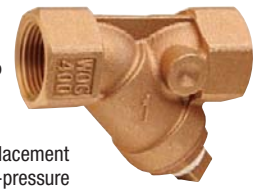
Automatically vents closed system to atmosphere. Prevents vacuum conditions that could siphon water from the system. Silicone disc. For water heaters, supply tanks, unit heaters, and low-pressure steam systems. NSF Listed and FDA Approved.

LEAD-FREE VACUUM RELIEF VALVE, CASH ACME

- Pressure range: 0 to 200 psi
- Temp. range: 0° to 210°F

Ideal for protecting pressure vessels and hot water supply systems against negative pressure. Silicone disc. Suitable for use in many commercial and domestic systems. Meets ANSI Z21.22 and is CSA 4.4 Certified.

LIQUID RELIEF, SERIES 55



- Pressure range: 0 to 100 psi
- Temp. range: 0° to 450°F

Small valve can be adjusted in the field by removing the hex cap. Bronze disc is lapped into position to minimize leakage. For liquid relief lines, tanks, sprinkler systems, and overprotection.

PVC and CPVC Y-Type Strainers

No. 3CEA4

HAYWARD +GF+

- Max. pressure: 150 psi at 70°F

Protect piping systems from debris, dirt, and rust. Hex cap permits easy removal of strainer screen for cleaning.

Mount vertically or horizontally. Clear PVC eases screen monitoring. FPM gaskets. Hayward models have 1/32" mesh, except 2½" to 4" are 1/8" mesh size. Georg Fischer models are #20 mesh.

Note: Replacement screens available; call 1-800-GRAINGER (472-4643).

Mueller Steam Specialty™

SSI

Metal Basket Strainers

No. 1RNK1

No. 1RNL1

Can reduce service time in applications needing frequent maintenance and large-capacity straining such as in water cooling, seawater, and hot water applications. Cover and basket O-ring seals eliminate particle bypass and reduce the need for gasket replacement. SSI brand meets ASME B1.20.1, except Nos. 3EJK1 to 3EJK4 meet ASME B16.5.

Note: 304 stainless steel replacement baskets available; call 1-800-GRAINGER (472-4643).

Metal Duplex Basket Strainers

- Screen size: 1/16"

Divert flow from 1 basket to another for easy in-line cleaning or changeout; no need to disassemble or remove the strainer. Include two 316 stainless steel perforated baskets. Typically used in cooling water, compressor, condenser, chemical processing, and pump station service.

Note: Replacement baskets available; call 1-800-GRAINGER (472-4643).

316 Stainless Steel Check Valves

- Max. pressure: 125 psi SWP
- Cracking pressure: 0.5 psi
- Max. temp.: 450°F

Valves allow flow in only 1 direction to prevent backflow, while the spring-actuated design allows fast seating action. FNPT connections. Dual guided stem and disc plus a soft PTFE seal for a bubble-tight shutoff. The 316 stainless steel body and spring are corrosion resistant and suitable for use with chemicals. Valves can be mounted vertically or horizontally.

Bronze and Lead-Free Bronze Spring Check Valves

GA GRAINGER APPROVED

MILWAUKEE VALVE

Spring-actuated valves open and close by liquid flow and allow flow in only 1 direction to prevent backflow. Bronze body. Can be mounted vertically or horizontally.

Note: Check valves are not for use with reciprocating air compressor service.

GA

- Max. pressure: 200 psi CWP
- Max. temp.: 250°F

When mounted vertically, valves must be positioned for flow up only.

No. 6AJY1

MILWAUKEE VALVE

- Max. pressure: 250 psi non-shock CWP
- Max. temp.: 353°F

Silent closing design to reduce water hammer. Certified for use in potable water applications.

Note: Find more Milwaukee Valve items at Grainger.com®; search for "Milwaukee bronze swing check valves".

Apollo Valves

Bronze, Lead-Free Bronze, and 316 SS Cone® Spring Check Valves

- Max. pressure: 125 psi steam, 400 psig CWP
- Cracking pressure: ½ psi

Straight-through design assures minimum change in velocity and protects against reverse flow. Stainless steel springs. Reinforced RPTFE ball check. Nos. 40D878 to 40D885 have RPTFE seat, Nos. 40D886 to 40D888 have EPDM seat. All models mount vertically or horizontally. FNPT connections. Lead-Free check valves are certified NSF/ANSI 372 and certified for use in potable water applications.

Note: Not recommended for use with reciprocating pumps and similar applications that may induce repetitious vibrations.

Glass-Filled Polypropylene
No. 4DJC4

GA GRAINGER APPROVED

Plastic Check Valves

- Max. pressure: 125 psi
- Max. temp. 140°F

Feature good chemical resistance and have stainless steel ball and spring. Mount vertical or horizontal. Glass-filled polypropylene valves require 0.33 psi cracking pressure. Gray PVC, polypropylene, and white nylon require 1 psi cracking pressure.

Triple-Duty
No. 1RXE3

SSI

Mueller Steam Specialty™

Heavy-Duty Check Valves

- Max. pressure: 200 psi

TRIPLE-DUTY

- Max. temp.: 212°F

With spring-loaded silent check valve, balancing valve, and shut-off valve. Center-guided Buna N seal disc ensures leak-free performance. For pump protection and HVAC chilled water installations. Meet ASME B16.1.

SILENT

- Max. temp.: 300°F

ASME Class 125 wafer-style valves prevent flow reversal; eliminate water hammer and system surges. EPDM seal and O-ring. Vertical or horizontal mount. For liquid service use in HVAC, power, process, chemical, and waste industries.

SURE CHECK™

- Max. temp.: 100°F

Class 125 valves prevent surge and water hammer due to flow reversal; specially designed springs close discs before flow reversal can occur. With stainless steel springs and Buna N seal. Mount vertically or horizontally. Designed to fit ANSI flanges. Suitable for liquid and gas service applications. Meet ANSI and FM Approved.

SPRING-LOADED/DUAL-DOOR

- Max. temp.: 250°F (cast iron); 600°F (stainless steel)

Wafer-style ASME Class 125 and Class 150 flanged valves fit between flat-face and raised-face flanges; reduce water hammer, surge, and backflow in piping systems. Cast-iron models have bronze or stainless steel disc and stainless steel spring. 316 stainless steel models have stainless steel disc and spring. For use in liquid and air service in industrial process, wastewater, and pulp and paper industries. Cast-iron are FM Approved; stainless meet API 594.

Armstrong

Condensate Coolers, T-Line Strainers, and Float Type Air Vents

CONDENSATE COOLERS

- Max. pressure: 150 psig
- Max. temp.: 180°F

Use to mix hot water or hot condensate with a cold water supply to help reduce the temperature to an acceptable level. Can cool to a preset temperature of 135°F, or field set to a desired temperature. Suitable for most plumbing systems.

T-LINE STRAINERS

- Max. pressure: 400 psi
- Max. fluid temp.: 500°F

Feature a larger open screen area and can trap particles that harm valves and other sensitive equipment in your steam or refrigeration systems. Corrosion-resistant stainless steel.

FLOAT TYPE AIR VENTS

Free-floating air/gas vents provide positive venting of air/gases under pressure. Corrosion-resistant, stainless steel vents feature a positive-closing lever to help ensure a leaktight closing. Body and caps are welded together to form a permanently sealed, gasketless, and tamperproof unit.

MEPCO
MARSHALL ENGINEERED PRODUCTS CO.

Thermostatic Steam Traps

Design allows trap to be inspected and serviced without breaking pipe connections. Armstrong® models have one moving part, while Mepco® models feature an innovative floating valve design and rounded seat to help prevent corrosive elements and dirt from affecting trap operation. All models respond quickly to changing pressure and condensate loads and are suitable for use in many steam heating systems and steam process equipment.

Steam Traps

Inverted bucket steam traps feature a free-floating valve mechanism with no fixed pivots to wear out. They are low maintenance and designed to handle dirty steam for reliable service and long life.

Mepco—Disc steam trap allows easy maintenance, inspection, and a 1-pc. thermodynamic cartridge can be replaced without removing the trap from the line. Durable and can withstand the effects of superheat, vibration, water hammer, and corrosive environments.

Float and Thermostatic steam traps are not affected by wide or sudden pressure changes, respond quickly to condensate load changes, and can function under high back pressure conditions.

Armstrong—Inverted bucket steam traps feature an innovative leverage system that multiplies the force provided by the bucket to open the valve against system pressure. Design can provide reliable operation and efficient condensate drainage on most types of steam equipment.

Horizontal In-Line No. 36Y266

Armstrong®

Cast-Iron and Ductile Iron Float and Thermostatic Steam Traps

- Cast-iron body, except Nos. 36Y278 to 36Y281 are ductile iron

Feature stainless steel internals for long life in applications where continuous drainage with high air-venting capacity is required. Horizontal Same Side models feature inlet connections on both sides of the body to provide flexibility in piping.

Note: Steam traps are not for use in systems where excessive hydraulic or thermal shock are present.

Apollo® Valves | WATTS REGULATOR

Carbonated Beverage Backflow Preventers

- Max. pressure: 150 psi
- Max. temp.: 130°F, except No. 5AJ86 is 110°F

Dual check design and can install flow-up, flow-down, or horizontally.

PPO (POLYPHENYLENE OXIDE)

Install permanently on water supply line to protect against copper poisoning in carbonated beverage dispensing lines. Flare connection. Certified for use in potable water applications. Meet ASSE 1022 and NSF 372.

316 STAINLESS STEEL

For use on post-mix carbonated beverage equipment and dispensing equipment for tea and coffee. SAE male flare connection. Certified to ANSI/NSF 18, Manual Food and Beverage Dispensing Equipment; all rubber compounds comply with FDA food additive regulations.

No. 5AJ86

Dual check valve meets ASSE 1032.

No. 5AJ88

Atmospheric port provides visual indication of the failure of the second check. Wye pattern strainer model for water supply installations. Dual check valve with atmospheric vent meets ASSE 1022.

Hose and Laboratory Connection Vacuum Breakers

WATTS REGULATOR | Apollo® Valves | GA GRAINGER APPROVED | ZURN WILKINS

Prevent backsiphonage of contaminated water into water supply. No need for plumbing changes. Suitable for hot or cold water service. Single-check design. No. 5DMJ5 is certified for use in potable water applications. Nos. 6KK08 and 6KK09 have 2 independently acting soft-seated checks. Nos. 6AJZ3, 6KK08, and 6KK09 come with a break-off attachment screw for permanent installation. All models meet ASSE; except No. 5DMJ5 meets CSA only; Nos. 6AJZ3, 6A766, 6LL80, and 6LL79 also meet ANSI; Nos. 6KK08, 6KK09, 6A766, 22N566 and 22N567 also meet IAMPO; Nos. 6A766, 6LL80, and 6LL79 also meet UPC; Nos. 6KK08, 6KK09, 6A766, 6LL80, and 6LL79 also meet CSA.

Atmospheric-Type Vacuum Breakers

- Max. pressure: 125 psi

Prevent back-siphoning of polluted water into potable water systems and are corrosion-resistant forged-brass construction, except Nicholson® models help protect plant and process equipment against vacuum conditions typically associated with cooling applications. Nicholson models also promote better heat transfer efficiency, allow condensate to be drained from steam systems, and are for use in heat exchangers, jacketed kettles, steam mains, and other process equipment.

Note: Only install in areas where water spillage will not cause damage. Not for continuous-pressure applications.

Apollo, Lead-Free Bronze and Lead-Free Bronze Rough Chrome— Nos. 40D832 to 40D836 are certified for use in potable water applications. All models meet ASSE 1001 and NSF/ANSI.

Apollo, Rough Brass and Rough Brass Polished Chrome—Meet ASSE 1001.

Watts, Lead-Free Brass—Certified for use in potable water applications. Meet ASSE 1001 and ANSI A112.1.1, CSA B64 Certified; except Nos. 46A958 and 46A957 meet ASSE 1001 and are CSA B64.1.1 Certified only.

Zurn Wilkins, Cast Brass and Cast Bronze—Certified for use in potable water applications. Meet ASSE 1001 standards and CSA Certified; IAPMO Listed.

Backflow Test Kits

- Accuracy: ±2 psid (descending), except No. 34CU35 is ±1 psid (descending), and No. 5AJ67 is accurate ±1% of full scale

For testing reduced pressure principle, pressure vacuum breaker and double check valve backflow prevention assemblies. Nos. 6AJV6 and 34CU33 to 34CU35 have soft-seated brass needle valves with replaceable valve seats and cleanable 90-micron filters that reduce plugging with scale, sand, and other contaminants. Capable of performing all known test procedures including those recommended by ASSE, AWWA, FCCC, HR-USC, and NEWWA. No. 34CU34 allows you to perform tests with the gauge mounted in carrying case, or gauge can be easily removed for added portability. Nos. 34CU33 to 34CU35 include 3 sets of brass fittings for hookup to all standard size test cocks. No. 20RJ62 fits ¼" to 2" backflow preventers and includes three ¼" plastic quick test fittings and O-rings.

WATTS REGULATOR | ZURN WILKINS

Reduced-Pressure Zone (RPZ) Backflow Preventers

- Max. pressure: 175 psi
- NPT connections, except Nos. 5DMJ0 to 5DMJ4 have IPS, Nos. 15W053 to 15W055 have flanged end
- Find information on kit contents at Grainger.com®

Help prevent the reverse flow of polluted water into the potable water supply due to backsiphonage and backpressure.

Watts 009 Series—No. 6A771 is the M1 version of the 009 Series. Nos. 429J28 to 429J30 meet ASSE, CSA, and are 3-UL Classified. Nos. 5DMJ0 to 5DMJ4 meet ASSE, AWWA, CSA, IAPMO Foundation for Cross-Connection Control and Hydraulic Research at USC. Nos. 6A770 and 6A771 meet ASSE 1013, AWWA C-511-92, CSA B64.4, and IAPMO. Nos. 26X125 to 26X140 meet ASSE, CSA, UPC, and USC.

Zurn Wilkins 375XL Series—Models have a pressure differential relief valve located between 2 independently operated spring-loaded centers. Meet ASSE 1013, IAPMO, CSA, and USC. NSF-61 Listed.

Watts 909 Series—2½" to 4" models have flanged end connections. Meet ASSE 1013, AWWA C-511-92, CSA B64.4, except No. 26X122 also meets UPC and USC.

Zurn Wilkins 975XL2 Series—Top entry allows easy access to internal components. Meet ASSE 1013, CSA Certified, IAPMO Listed, and NSF-61 Listed Annex G.

Zurn Wilkins 975XL Series—Provide protection where a potential health hazard exists. Meet ASSE 1013, IAPMO, CSA, FM, and USC.

Air Gaps—Provide an unobstructed separation between potable water supply discharge and receiving vessel opening.

Repair Kits—Include disc assemblies, O-rings, and diaphragm.

Test Cocks—Use to facilitate backflow assembly testing or as isolation valves for gauges or small equipment lines.

RPZ Backflow Preventers with Composite or Ductile Iron Body

ZURN WILKINS

- Max. pressure: 175 psi
- Max. temp.: 180°F; except Nos. 6AVY4 to 6CUN5 are 140°F
- For kit contents, go to Grainger.com®

Designed for installation on potable water lines to protect against both back-siphonage and backpressure of contaminated water into the potable water supply. Assemblies provide protection where a potential health hazard exists. Removable pressure vessel allows for easy repair and maintenance. Composite materials reduce the amount of bronze in the valve providing a built-in antitheft feature. Meet ASSE 1013, IAPMO, CSA, and USC.

Lead-Free Reduced-Pressure Zone (RPZ) Backflow Preventers

Apollo Valves

- Max. pressure: 175 psi
- Max. temp.: 180°F
- Bronze body

Top-mounted test cocks. Backflow preventers are certified for use in potable water applications Meet ASSE 1013, USC, FCCCHR, and ARRA; UL Classified when ordered without ball valves.

Repair Kits—Use to replace all elastomer parts in assemblies. Include O-rings, seat, and diaphragm relief valve.

Air Gap Drain Kits—Funnel minor relief valve discharges into the drainage system. Threaded connections.

Replacement Test Cock—Use to facilitate backflow assembly testing or as isolation valves for gauges or small equipment lines.

Valve Enclosures and Boxes

HotBox · NDS We put water in its place

Valve Enclosures—Help protect backflow protection devices, valves, and pumps from freezing. The vandal-resistant access cover is hinged; lockable. Drain openings accommodate maximum RPZ discharge. 120V. Unit can be anchored to a concrete pad. Meets ASSE 1060.

Valve Boxes—Protect irrigation valve and the overlapping cover keeps debris from between the body and cover. Rugged PVC construction with fade-resistant finish. For use in commercial, residential, and municipal landscape applications.

Meter Boxes—Ideal for protecting underground water meters and constructed of rugged, injection molded, recycled structural foam polyolefin material. UV inhibitors help prevent discoloration and cracking. The corrugated sidewalls help provide greater strength, while the reinforced covers keep out debris and can handle heavy loads.

Lead-Free Point of Use Mixing Valves

Hot water temperature control valves are specifically designed for mixing cold and hot water on hot water supply systems. Can be used to reduce the temperature of hot water from the system, and are ideal for radiant heat and under-the-sink applications. All models are certified for use in potable water applications.

WATTS REGULATOR

Automatic Air Vent Valves, Air Separators, and Boiler Feed Valves

No. 46A967

Automatic Air Vent Valves, Brass—Provide automatic air venting for cold or hot water distribution systems. Valve can be disassembled for maintenance.

Automatic Vents for Hot Water, Brass—Allows easy replacement cartridge installation without system shut down. Suitable for automatic or manual air release on baseboards, convectors, radiators, and high points in piping systems.

Air Separators, Iron—Designed to separate air from water in hydronic heating systems. Separators have tappings that allow installation of an air vent and expansion tank.

Boiler Feed Valves with Backflow Preventer, Cast-Iron—Combination backflow preventer and feed water pressure regulator in 1 pre-assembled unit.

WATTS REGULATOR

Pressure-Reducing Control Valves

No. 6AKW2

No. 6CJP5

- Operating temp.: 180°F
- Adjustment range: 30 to 300 psi

Ductile iron body and cover. Stem, spring, and nut are stainless steel; trim is 316 stainless steel. Buna N elastomer. Meet ASTM A536. NSF Listed.

Full Port—Throttles to reduce higher upstream pressure to constant lower stream pressure. Adjustable closing speed and reducing setpoint.

Single Chamber—Fixed orifice with nonadjustable closing speed and set point.

Air Release and Air Vacuum Valves

VAL-MATIC®

- Max. temp.: 250°F
- Vacuum pressure: 29" Hg
- FNPT connection

Cast-iron construction. Float and internal components are 316 stainless steel.

Air Release Valves—Resilient seal for positive shutoff. Nonclogging design helps eliminate backwash. Releases pockets of accumulated air in a pressurized water system.

Air Vacuum Valves—Have high/low pressure resilient seating. Full pipe size inlets and outlets help prevent clogging. For use in water distribution and transmission and vacuum protection.

Air Release/Air Vacuum Valves—Incorporate both an air release valve and an air vacuum valve into 1 compact unit. Suitable for all high points in a water distribution transmission system.

Mixing Valves

POWERS™ WATTS REGULATOR

Certified for use in potable water applications.

Powers—Feature paraffin-based, advanced thermal actuation design to sense and adjust outlet temperature for precise temperature control. Virtual shutoff if supply pressure fails. Vandal-resistant locking mechanism. Rotatable union triple-duty checkstops.

- Max. pressure: 125 psi
- Temp. range: 90° to 160°F

Watts®—Uses a double throttling design to control both the cold and hot water supply to the mixed outlet. Includes an adjustment cap with locking feature.

- Max. pressure: 150 psi
- Temp. range: 80° to 120°F

Hose Stations and Accessories

LEONARD® WATER TEMPERATURE CONTROLS

Nos. 45K810 and 45K811 are specially designed for use with live steam and water, and have an automatic shutdown feature if cold water supply is interrupted. Nos. 45K812 and 45K813 feature a thermostatically controlled valve that helps to maintain a constant temperature. Nos. 45K816 and 45K823 are manually blended models that can handle both hot water or steam for blending. Hose stations are for use in dairy, food processing, manufacturing, and pharmaceutical plants and in other industrial washdown applications.

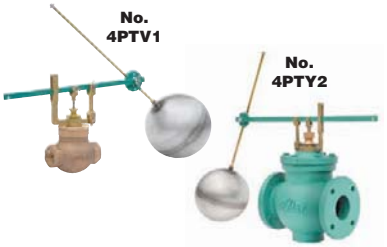
Float Valves

KECKLEY



Automatically open or close when liquid reaches a predetermined level. Can be used for filling control (close on level rise) or drainage control (open on level rise), in an open or closed tank, storage tanks, cooling towers, and reservoirs. NPT connection. Float is 304 stainless steel construction.

Type 7—Suitable where tight-closing valves are required. Not for use with chemicals harmful to brass, iron, or neoprene. Max. temp.: 125°F, control of liquid supply to an open tank, where dead-end closing is not essential and where valve pressures are normal. Max. temp.: 406°F.

Type 77—Suitable where tight-closing valves are required. Not for use with chemicals harmful to brass, iron, neoprene, or leather. Angle pattern will have a bottom inlet/side outlet. Max. temp.: 125°F.

Bronze Float Valves

- Brass rod

These heavy-duty float valves are ideal for the reliable control of liquids in cooling towers, open tanks, reservoirs, or vats. Models feature a float arm that adjusts easily to control the water level. Nos. 52WY27 to 52WY54 include a float that can be set anywhere in a 360° circle around the valve body. Nos. 2ZDN3 to 2ZDN5 are bulkhead-mount and have a machined flange on inlet side with male straight pipe threading for locknut. Nos. 46A987 to 46A989 can be tank wall mounted.

PVC Float Valve Assemblies

KerickValve

- Max. pressure: 100 psi

BULKHEAD MOUNTING

MA models can be mounted vertically. M models have a 0.093" orifice with a free-flow outlet. Estimated flow rate of 1.3 gpm at 40 psi. Polyethylene float attached to valve.

BULKHEAD AND PIPE MOUNTING

Valves resist corrosion, have no diaphragms to clog, and are NSF-grade PVC. Seals are chemical-resistant, and hardware is 18-8 stainless steel to resist corrosion. Floats and rods sold separately on Grainger.com®.

Heavy-Duty Float Balls

Copper—For use in water applications and open tank. Not for pressurized or high-temperature applications. Operating temp.: 50° to 180°F.

Plastic—Nonelectrolytic floats are highly corrosion-resistant. All injection-molded, polyethylene construction resists sunlight deterioration. Nos. 2ZDU6 and 2ZDU7 have 2 float balls attached together.

Polyethylene—Resist corrosion and sunlight deterioration. Nos. 4DMF5 to 4DMF9 are suitable for open tank service. No. 46C005 is unaffected by salts and caustic fluids. All models have a 100°F max. liquid temp., except No. 46C005 is 140°F.

Stainless Steel—Resist corrosion. Suitable for open and closed tank use, and high-pressure and high-temperature applications. Operating temp.: -30° to 225°F.

Roof and Yard Hydrants

▪ Outlet size: ¾" hose

Campbell, Frost Proof, Lead Free Yard Hydrants—Self-draining to prevent riser pipe and hydrant head freeze-up. Solid bucket hook and oversized head and handle with snap lock, 1-pc. Buna N plunger, handle-to-head padlock locators, and 7/16" steel rod in 1" galvanized riser pipe.

Woodford, Iowa® Frost Proof Yard Hydrants—Water flows even in subzero temps. and drains when water is shut off and hose removed. Large nitrate plunger for positive shutoff. Graphite packing. Adjustable lever lock tension. ⅜" galvanized steel pipe operating rod, and 1" galvanized steel pipe casing.

Woodford, Frost Proof Roof Hydrant—Provides water for most types of roof equipment even in subzero temperatures. Hydrant drains when water is shut off, even with hose attached. Must be piped to drain location. Large nitrate plunger for positive shutoff. Graphite packing. Adjustable lever lock tension. Includes cast-iron roof support, flanges, mounting bolts, nuts, and washers. EPDM well seal boot seals tight between the hydrant support and hydrant pipe. Meets ASSE 1052.

▪ Max. pressure: 125 psi ▪ Max. temp.: 120°F

Commercial-grade wall hydrants are antisiphon vacuum breaker protected, and drain when shut off, even if hose is still attached. A 1-pc. valve plunger accurately controls both flow and drainage without the need for additional adjustments. Chrome-plated brass and copper construction. Solid brass operating rod. Hardened stainless steel stem resists damage. ¾" male hose thread. ¾" FPT pipe connection. Include tee to operate hydrant. Nos. 6CHX1 to 6CHX3 and 6CHX5 come with a chrome-plated brass box. All hydrants meet ASSE 1019 Type B, IAPMO listed.

Water Gauges and Tubular Gage Glass and Rod Kits

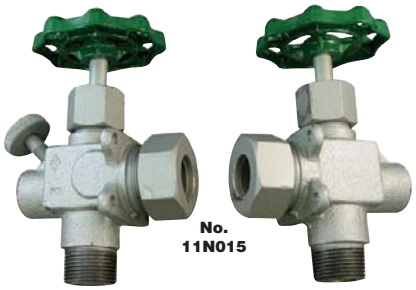
▪ Water gauges: MNPT connection

STANDARD PATTERN
Provide liquid level verification for a wide variety of liquids.

HEAVY PATTERN
Have a heavier valve body pattern for higher service ratings.

AUTOMATIC
Ball checks restrain fluids in the event that the glass should break. No. 2EEU3 is CRN Registered.

TUBULAR GAGE GLASS AND ROD KITS
▪ Max. pressure: 400 psi
▪ Max. temp.: 300°



For use with gagecocks where liquid level monitoring is required. Red Line Glass allows easy viewing of fluid. Each kit includes 4 bronze rod guards and 1 borosilicate glass tube. Can be used with a variety of fluids in chemical, petrochemical, and processing applications. Meet ASME standards and boiler codes.

PENBERTHY

Straight Pattern Gagecocks

- -20° to 500°F
- ⅜" FNPT drain connection
- MNPT vessel connection

For use where liquid level monitoring is required (use with Tubular Gage Glass and Rod Kits sold on page 2912). Gagecocks have an automatic ball-check shutoff that helps prevent rapid loss of fluid from accidental glass breakage. Needle drain valve, integral bonnet, and drain cock construction. Rigid vessel and stuffing box gage connections. 3½" max. height. For use with a variety of fluids in heavy/light industrial, municipal, petrochemical, and utility applications. Meet ASTM.

GA GRAINGER APPROVED

Parker EATON

Brass Saddle Valves and Needle Valves

SADDLE VALVES

- Temp. range: -30° to 250°F

Provide a water supply for humidifiers, refrigerators, automatic ice makers, and similar applications. Valves come complete with fittings for ¼" O.D. copper tubing or ¼" O.D. plastic tubing, brass tubing inserts, and instructions. Brass valve, stainless steel pin.

Self-Piercing—Easily installed on ⅜" to 1⅜" O.D. copper tubing. Not for iron pipe.

Self-Piercing Kit—Quick and easy to use. Includes 25 ft. of ¼" O.D. polyethylene tubing, saddle valve, and brass adapters and inserts.

Nonself-Piercing—Installed on ½" or ¾" galvanized water pipe by drilling ¼" hole in pipe, installing pilot tube, and tightening.

NEEDLE VALVES

- Max. pressure: 150 psi
- Temp. range: 0° to 250°F, except Parker brand valves are -45° to 250°F

For use in hydraulic and pneumatic systems. Designed for automotive and industrial applications. Standard style, brass construction with steel handles. Valves come complete with nuts and sleeves. Parker brand valves feature metal-to-metal seats with fine thread screw down.

Brass Ground Plug Valves

Parker

GA GRAINGER APPROVED

- Max. pressure: 30 psi
- Temp. range: -65° to 250°F, except Parker valves are 32° to 125°F

Ideal for use in automotive and industrial applications. GA valves feature a universal lubricant satisfactory for most common fluids. All Parker valves are manufactured from forged bodies or castings for greater strength.

Dayton airmaster Fans

Light-Duty Industrial Pedestal Fans

- Ball Bearings
- OSHA-compliant wire guards

These fans cool light manufacturing areas, warehouses, and other dry, clean spaces.

DAYTON®

Fan heads have locking tilt adjustment for directional air flow.

Foldable Pedestal—Fan head unfolds into upright position. Fully assembled fans feature pedestal with 2½" dia. plastic wheels for roll-about portability.

Quiet-Design—Provides high-velocity air flow in quiet settings such as schools, libraries, churches, offices, or other quiet environments. Adjustable-height pedestal included.

AIRMASTER

Adjustable-height pedestal included.

High-Visibility Industrial Pedestal Fans

Dayton

- Non-Oscillating
- 115VAC
- Totally enclosed motors
- Ball bearings
- OSHA-compliant wire guards

Safety-yellow finish attracts attention to help prevent accidental damage to the fan. Pedestal adjusts from 41½" to 59". Fans include an extension cord (15 ft. for No. 7DJ29 and 14 ft. for No. 7DJ33) and a 3-position drop cord switch.

Guards for Industrial Cooling Fans

Dayton

- OSHA-compliant polyester powder-coated wire guards

Replacement guards that enclose fan blades to protect them from damage and prevent injuries from accidental contact. Guards mount to thru-bolts on yoke-mounted or rigid-base motors. Rear section of guard has 4 mounting slots to accommodate motor thru-bolts.

Note: Cradle-type motors cannot be used.

Industrial Pedestal Misting Fans

VersaMist Dayton

- Non-Oscillating
- 115VAC
- Totally enclosed air-over motors
- OSHA-compliant wire guards

Feature a misting hub that connects to a water source for adding moisture to the air for rapid cooling.

Versa-Mist—No. 4ARK3 has 10 gal. reservoir for up to 5 hr. of run time. No. 4ARK4 has 14 gal. reservoir for up to 7 hr. of run time and includes integrated wheels and handle.

- Sealed ball bearings

Dayton®—Fans include pedestal and mounting hardware.

- Ball bearings

Dayton

Standard-Duty Industrial Fan Heads

- Totally enclosed motors
- Ball bearings
- OSHA-compliant wire guards

Provide cooling in heavy manufacturing areas and other dusty or dirty environments. Fan heads tilt and lock to direct airflow. 115VAC units feature a pull chain switch and 10-ft. 3-cond. power cord; others are hardwired. 208VAC and 277VAC fans reduce amp draw and can be wired with industrial lighting systems.

High-Temperature Industrial Fan Heads

Dayton

- Non-oscillating
- Ball bearings
- Hardwired
- Max. ambient temp.: 140°F
- OSHA-compliant wire guards

Provide a reliable source of cooling in high ambient temperatures that could burn out fan heads rated for standard temperatures. Fan heads include conduit box and mounting bolts.

No. 4VAC3

Corrosion-Resistant Industrial Fan Heads

Multifan

- Non-oscillating
- Sealed ball bearings
- Variable speed controllable
- Hardwired
- OSHA-compliant wire guards

These fan heads withstand exposure to water and moisture to allow operation in wet or humid areas without damage to the fan. Indoor uses include regulating temperature in greenhouses to optimize plant growth and ventilating livestock buildings to prevent heat stress in animals and reduce the buildup of moisture, manure gases, pathogens, and dust. Outdoor uses include cooling people in pool areas and other high-moisture locations. Optional controls and steel mounting brackets are sold separately.

High-Velocity Industrial Fan Heads

PATTERSON
THE AUTHORITY IN AIR MOVEMENT

- Non-oscillating
- Ball bearings
- OSHA-compliant wire guards

Have a high-rpm motor and a tubular housing for pushing air at higher speeds over longer distances than fan heads with a standard open-grill design. 1-phase fans have 12-ft. power cord; 3-phase fans are hardwired.

Mounting Yokes and Brackets—For ceiling-mount only, yoke is required without additional mounting bracket. For floor, wall, or dock mounting positions, additional mounting bracket is needed along with yoke. Assembly hardware included. Brackets sold separately on Grainger.com®.

Light-Duty Industrial Wall-Mount Fans

- Ball Bearings
- Unassembled
- OSHA-compliant wire guards

Fans cool light manufacturing areas, warehouses, and other dry, clean spaces where floor space is limited.

Dayton®—Fan heads feature locking tilt adjustment for directional air flow. Bracket and secondary safety support cable included.

Dayton® Quiet Design—Provide high-velocity air flow in quiet settings such as schools, libraries, churches, offices, or other quiet environments. Bracket and secondary safety support cable included.

Airmaster—Nos. 2HYH1 through 2HYH3 feature pull chain speed switch and yoke mount which attaches to any surface with 1 bolt or lag screw. Other models include mounting bracket and safety cable kit.

Standard-Duty Industrial Wall-Mount Fans

Fans cool heavy manufacturing areas and other dusty or dirty environments with limited floor space.

Schaefer—Designed for agriculture, horticulture or industrial applications. Wall-mount units include mounting bracket.
- Ball bearings
- Zinc plated wire guards

Big Ass Fans®—Nos. 55FF65 and 55FF67 have 360° rotation and 40° tilt. No. 744H99 features an EC motor and 360° rotation. No. 326VG8 has an IP65 EC motor and an occupancy sensor.
- OSHA-compliant guards, except No. 55FF68

Dayton®—Fan heads feature locking tilt adjustment for directional air flow. 115VAC models include 3-cond. power cord; others are hardwired. Bracket and secondary safety support cable included.
- Ball bearings
- OSHA-compliant wire guards

Dayton® Quiet Design—Designed to provide high-velocity air flow in quiet settings such as schools, libraries, churches, offices, or other quiet environments. Bracket and secondary safety support cable included.

Airmaster Fan—Fans include a mounting bracket and secondary safety support cable kit.
- OSHA-compliant wire guards

Industrial Wall-Mount Washdown Fans

Dayton

- Non-oscillating
- Ball bearings
- Hardwired
- OSHA-compliant wire guards

Can be hosed off or pressure washed during cleaning in areas that require regular washdowns. Fan heads tilt and lock to direct airflow. Secondary safety support cable included.

Painted Steel—Primer and white paint finish on motor. Conduit box included.

Stainless Steel—Approved by the USDA and NSF for food zones. Motors comply with BISSC Standard for waterproof motors.

Hazardous-Location Industrial Wall-Mount Fans

Dayton

- Non-oscillating
- Motors only are UL Listed (E29183) for Class 1, Div. 1, Group D, and Class II, Div. I, Groups E, F, and G hazardous locations
- Ball bearings
- Hardwired
- OSHA-compliant wire guards

Resist sparking to reduce the risk of ignition when cooling areas with flammable or explosive vapors, gases, or dust. Designated for use in specific hazardous atmospheres as defined under Article 500 of the National Electrical Code (NEC). Multi-position wall bracket and secondary safety support cable included. UL Listed conduit box supplied for hard-wiring.

WARNING: Fan not appropriate for use where paint residue can accumulate on motor or blade.

Corrosion-Resistant Industrial Wall-Mount Fans

Dayton

- Non-oscillating

Withstand exposure to moisture to allow operation in wet or humid areas without damage to the fan. Indoor uses include regulating temperature in greenhouses to optimize plant growth and ventilating livestock buildings to prevent heat stress in animals and reduce the buildup of moisture, manure gases, pathogens, and dust. They're also used as outdoor mountable fans for cooling people in pool areas and other high-moisture locations.

Nos. 1ZCN7 and 1ZCN8 feature OSHA-compliant wire guards. Nos. 49YW49 to 49YW51 feature wide-spaced wire guards to help prevent clogging.

Light-Duty Industrial Mobile Floor Fans

- 115V
- Ball bearings
- OSHA-compliant wire guards

These fans cool light manufacturing areas, warehouses, and other dry, clean spaces.

Light Duty—These fans can move high volumes of directed airflow at low velocity.

Light-Duty Quiet Design—These fans provide high-velocity air flow in quiet settings. Fan head tilts to direct air flow.

Portable Tilt Carriage Kits for Light Duty Fans—These carriage kits provide support for the fan head while allowing it to be angled for directing airflow. They can be rolled between locations using the wheels or casters originally supplied with the fan.

Ceiling Mount Kit for Light Duty Fans—This kit allows fan heads to attach to a wall, ceiling, or post for circulating air right where it's needed.

Dayton BIG ASS FANS SCHAEFER airmaster Fans

Standard-Duty Industrial Mobile Floor Fans

- OSHA-compliant wire guards

These fans cool heavy manufacturing areas and other dusty or dirty environments.

DAYTON®

- Ball bearings

Fans move high volumes of directed air flow and tilt 360°. Nos. 31XL41 and 31XL42 have maintenance-free Brushless DC EC (electrically commutated) motors; others have PSC. All fans include cord wrap, handle, and 7" rubber wheels.

BIG ASS FANS®

No. 55FF66—has 360° rotation and 40° tilt. It has ball bearings and a rolling pedestal mount for mobility. It's used in unconditioned spaces; areas with low ceilings and obstructions; long, narrow aisles or rooms; and harsh environments.

No. 699W08—has a quiet, energy-efficient direct-drive motor and double-sealed ball bearings. It fits through standard inside doors, has handles on both sides, and indoor/outdoor rubber wheels.

SCHAEFER

- Maintenance-free PSC motors
- Sealed ball bearings

Drum-style fan has stacking tabs and cart with rubberized wheels and a grounded cord.

AIRMASTER FAN

- Sealed ball bearings

Has a maintenance-free EC (electrically commutated) IP56 motor. It comes with a handle and cord wrap on each side, 8" rubber wheels, and locking casters.

Dayton BIG ASS FANS

Outdoor High-Visibility Industrial Mobile Floor Fans

- Sealed ball bearings
- OSHA-compliant wire guards

These water-resistant fans have a safety-yellow finish that attracts attention to help prevent accidental damage to the fan. These air circulators are commonly used for cooling high-traffic areas where forklifts and other vehicles are used as well as low-light areas where fans may be difficult to see.

Dayton®—Fans move air in outdoor environments, such as construction sites, athletic fields, and open-air loading docks. Water-resistant motors have automatic thermal overload protection. Equipped with tubular steel frame, 8" dia. rubber wheels, and sturdy tilting wheel kit for directing air flow. Units feature 4" base feet, built-in cord wrap, and handle. Foot and wheel assembly is required.

Big Ass Fans®—No. 699W07 is a quiet, energy-efficient, high volume/low speed (HVLS) fan. It's typically used for event spaces and work areas. It has 360° head rotation with 16 selectable cage positions. This fan has a washdown design for easier cleaning.

PATTERSON THE AUTHORITY IN AIR MOVEMENT

High-Velocity Industrial Mobile Floor Fans

- Ball bearings
- OSHA-compliant wire guards

These fans have a high-rpm motor and a tubular housing for pushing air at higher speeds over longer distances than fans with a standard open-housing design. They provide more coverage than a typical industrial fan for cooling long aisles and large areas in warehouses and manufacturing plants. 115VAC models include factory-wired 12-ft. cord with plug. 3-phase models require hardwiring.

1-Speed Fans—Fans include a mobile tilting pedestal with wheels (except No. 7J736 has a pedestal base).

3-Speed Fans—Used for people and process cooling and general air circulation. Units have 6" casters and easy-to-grip handle.

BREEZER MOBILE COOLING

Power Breezer® Portable Misting Coolers

- 1 HP, 1750 rpm
- Variable speed
- Oscillating head
- Integrated water tanks
- OSHA-compliant wire guards

Durable cooling fans can reduce heat-related injuries and improve productivity. Models can reduce temperatures by up to 27°F by circulating atomized water vapor without getting users or equipment wet. Can be used outdoors and in partially covered environments. These wheeled coolers have no evaporative pads to change out, but require regularly draining and cleaning the water tank to prevent odors and clogging from sludge buildup.

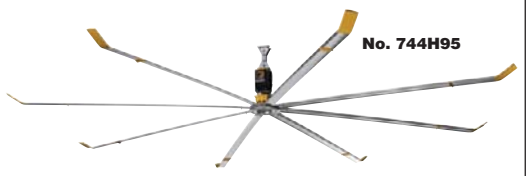
CANARM HVAC
VES ENVIRONMENTAL SOLUTIONS
Dayton

Industrial Ceiling Fans

- 120VAC

These fans combine a traditional ceiling fan appearance and an industrial-duty build for circulating air in manufacturing plants and large commercial settings. These air circulators are made of heavier-gauge materials than decorative office or residential ceiling fans. A mounting bracket is included for attaching these fans to a ceiling. Optional adjustable fan controls sold separately, this page.



Canarm—4-speed No. 38RJ57 includes a wall control. Standard-duty models are weather-resistant, suitable for high-moisture applications, and have heavy-duty motors.

VES—No. 488V20 includes a 3-speed wall control. Typically used in factories, garages, retail stores, and warehouses.
- Plastic blades
- 18" downrod

Dayton®—Fans feature orward/reversing mode when used with optional Speed Control No. 5NRA4 sold separately, this page.
- Aluminum blades
- 6" downrod

BIG ASS FANS

Industrial HVLS (High-Volume Low-Speed) Ceiling Fans

- Variable speed, reversible
- Aluminum airfoil blades
- Wall-mounted keypad
- Fire control panel integration

These fans feature long, specialized blades that move large volumes of air while rotating at a low speed. They operate with minimal noise to avoid creating disruptions and generate gentle airflow, making them ideal for cooling athletic facilities, retail spaces, garages, and factories. Fans include a mounting bracket. Additional models available on Grainger.com®.

Basic 6®—Have sealed industrial-grade motor and gearbox to withstand harsh conditions. Controller has onboard NEMA 4X VFD to eliminate RFI/EMI noise.

Powerfoil X3.0®—IP43 motor with fully sealed drive enclosure resists corrosion and heat build-up. Up to eight fans can be linked and controlled. Integrates with lights, security cameras, speakers, or other devices. Onboard VFD is housed in an ABS/PVC-based enclosure with built-in heatsink to eliminate RFI and EMI noise.

We carry Decorative Ceiling Fans on Grainger.com®

Decorative office ceiling fans have blade materials and housing finishes that provide an attractive alternative to industrial ceiling fans in offices, residences, and other light-duty settings. They provide cooling without taking up floor space and rotate at low speeds to regulate temperature without disrupting work areas. These cooling fans can mount flush to the ceiling using the included bracket, or they can be suspended from a downrod.

No. 2ELA2

No. 2ELA3

No. 2EJR6

Office Window Fans

- 120VAC
- Manual controls, reversible
- Assembled
- OSHA-compliant guards
- 6-ft. power cord

Can be positioned to either bring outside air into a room or to exhaust odors, smoke, or stale air from a room.

No. 2ELA2—Manually reversible twin fan has expander panels for a custom fit. Includes snap-on feet for table or floor use.

No. 2ELA3—Manually reversible Air Director® window/floor fan has pivoting tilt. Fits in front of window screen.

No. 2EJR6—Electrically reversible motor reverses with the turn of a dial. Window can be closed behind fan during inclement weather.

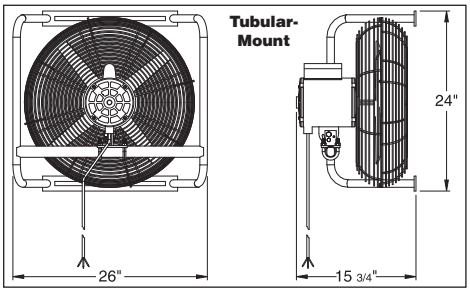
Guard- and Tubular-Mount Transformer Cooling Fans

- Totally enclosed motors
- Permanently lubricated sealed ball bearings
- OSHA-compliant wire guards

These fans blow air onto a transformer radiator to help regulate the temperature of an oil-cooled transformer. They help prevent overheating and reduce wear of transformers by circulating air around the radiator housing to speed cooling of oil within the radiator. Motor shaft with rust inhibitor treatment and shaft-end bearing slinger protect against dirt and moisture. Cast-aluminum propellers. Fans include weatherproof 15-ft. UL-Recognized power cord, factory prewired for 230V operation.

Guard-Mount—Have loops that connect to a separate guard-mount mounting kit for attaching to a transformer. Hot-dipped heavy galvanized steel guards. No. 2ATY1 mounting kit sold separately.



Tubular-Mount—Have a frame that mounts directly to a transformer. Zinc-plated wire guards. Mounting kit included.

Vehicle Bolt-On DC Cooling Fans

- Hardwired
- Adjustable-position swivel
- Base-mounted control switch

Provide cooling for operators of trucks, forklifts, cranes, tractors, and other vehicles. Their base mounts directly to a dashboard or other surface inside a vehicle to aim airflow toward operators for personal cooling. These cooling fans can be used where there's access to a compatible DC power supply. Mounting hardware and gasket included.

For portable vehicle fans, see page 950.

Vehicle DC Cooling Fans

- Vertical mount
- Totally enclosed motors
- Sleeve bearings
- Max. ambient temp.: 200°F
- 12VDC

Champion Series low-profile electric engine-cooling fans provide higher performance than belt- or clutch-driven fans. Reduce drag for improved fuel economy and horsepower. Provide max. heat transfer during low speeds and engine idle. Sealed fan motors are dust- and waterproof. Fans feature quiet, reversible S-blade design and all glass-filled nylon construction. Each has four 90° mounting feet, 8 rubber spacers, and 9" mating locking pigtail connector. 12", 14", and 16" fans have concentric retainer rings to keep blades from flattening out at high speed, maximizing air flow.

Compact Axial Fans

- All-position mounting
- Max. ambinet temp.: 158°F

These fans cool equipment within enclosures. They have a housing that can mount into existing louvered vents or cutouts that match the shape of the fan. Single-speed fans are not speed-controllable. All AC units are rated at 60/50 Hz (50 Hz operation will decrease CFM by approximately 20%). UL and C-UL Recognized Component, and RoHS Compliant (IP55 fans are TUV compliant).

Standard Square, AC—Driven with impedance-protected shaded pole or thermally protected PSC motor.

Standard Square, DC—Driven with brushless DC motor.

Wet-Location Square, DC—Motor is IP (Ingress Protection) rated to withstand water sprays.

Standard Oblong, AC—Driven with thermally protected PSC motor; housing has two flat sides and two curved sides.

Standard Round, AC—Driven with thermally protected PSC motor.

Standard Skeleton, AC—Require minimal space for installation; driven with impedance-protected shaded pole motor.

Compact Axial Fan Guards and Filters

These are fan attachments that block out debris to reduce the risk of damage to fans and enclosure components. They're sized to fit compact axial fans.

Fan Guards—These allow airflow while providing a protective barrier for the blades. Steel guards are nickel chrome-plated.

Shielded EMF Fan Guards—These are tightly woven metal mesh guards that protect fan blades, filter out contaminants, and provide EMI-RFI shielding.

Fan Guards with Filters—These fan guards combine a protective barrier for fan blades and filtering media for cleaning air. These plastic assemblies have a fan guard, replaceable filter media, and retainer.

Replacement Filters—These remove debris and contaminants from the air as it's pulled into a fan. 30 PPI media removes dust and contaminating particles; 45 PPI media is for heavy dust conditions.

Compact Axial Fans

- All-position mounting
- Ball bearings

These are equipment-cooling fans that regulate temperatures in enclosures. They can mount into cutouts that match the fan's shape or into existing louvered vents. DC units are fully speed controllable and reverse polarity protected. AC units are thermal overload protected. For IP68 (Ingress Protection Waterproof and Dust Proof) Axial Fans, see Grainger.com® using keywords "axial ip68".

Energy-Efficient, Square and Round— Driven with EC motor that saves energy and extends service life.

Standard Square, DC—Driven with brushless DC motor to extend service life. These fans also have electronically-commutated drives with electronic protection against reverse polarity. Many fans can be operated on voltages up to 50% lower and 25% higher than their nominal voltage (see Voltage in table) to enable the air performance to be adapted to the cooling requirements.

Standard Square, DC, 3300N Series— These fans provide lower noise levels and reduced power consumption than other compact axial fans.

Compact Axial Fan Guards

ebmpapst

These wire guards enclose the fan's blades to help shield them from debris or accidental contact.

Find Compact Blowers and Equipment Rack Air-Distribution Fans on Grainger.com®

Compact Blowers direct airflow at a 90° angle from the face of the fan for thorough coverage within an enclosure and have a slim profile for use in highly compact rack-mount servers.

Equipment Rack Air-Distribution Fans fit into rack enclosures and distribute air to eliminate hot spots and regulate temperatures.

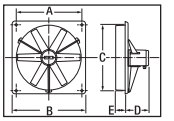
Direct Drive Corrosion-Resistant Exhaust Fans



Multifan

- Totally enclosed motors
- Sealed ball bearings
- Speed controllable (except No. 21A080); 1-phase fans accept Controller No. 1DGZ5, sold separately on Grainger.com®
- Horizontal or vertical mount
- Polypropylene propellers
- Corrosion-resistant fiberglass venturi frames
- OSHA-compliant intake guards

Engineered for continuous operation in highly corrosive environments, outdoors, and in wet applications. Noncombustible motor cap and sound-absorbing, antivibration cast-aluminum supports. UL Listed and CSA Certified.

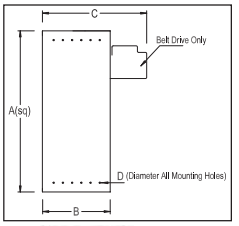
Agricultural Exhaust Fans



- Totally enclosed motors with sealed ball bearings
- Heavy-gauge galvanized frame withstands corrosive farm duty applications

All models have galvanized steel venturi panels and propellers, and 1" x 2" galvanized mesh intake and discharge guards. For humid, corrosive, nonexplosive, and nonhazardous environments such as livestock and poultry houses.

Note: OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel.

Direct-Drive—Shipped fully assembled.

Belt-Drive—Nos. 7DZ45 and 7DZ46 include motor, pulley, belt and motor plate; assembly required. Nos. 44YU10 and 44YU20 shipped without motor, but include drive sheaves, belt and motor plate; assembly required. Recommended motors: for No. 44YU10 use No. 4WNZ5; for No. 44YU20 use No. 3RCW9; both sold separately on Grainger.com®. Optional belt tensioner No. 45KF12 sold separately on Grainger.com®.

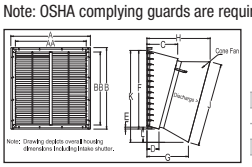
CFM ratings are based on units tested with ¾ HP motor and fan speed of 719 rpm. ** CFM ratings are based on units tested with 1 HP motor and fan speed of 608 rpm.

Slant-Wall and Cone Exhaust Fans

- Totally enclosed motors with sealed ball bearings
- Corrosion-resistant extruded aluminum shutter with quick-release latches



Venturi panel, housing, and propeller are corrosion-resistant galvanized steel. Heavy-gauge galvanized frame withstands humid, corrosive, nonexplosive, and nonhazardous environments such as livestock and poultry houses. Vertical mount, flush to inside of building. Each includes fan in housing, intake shutter, and discharge guard. CFM ratings are based on units tested with intake shutters and discharge guards, as well as discharge cones where applicable.

Note: OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel.

Slant-Wall—Discharge guard has 1" x 2" galvanized wire mesh. Shipped fully assembled.

Cone—Discharge cone increases fan performance and efficiency. Assembly required

- 2" corrosion-resistant circular discharge guard

CFM ratings are based on units tested with intake and discharge guards.

Dayton

Shutter-Mount Exhaust Fans

- Mount: vertical only
- Motors: totally enclosed, 115VAC, 60 Hz, thermally protected
- Max. inlet/ambient temp.: 104°F
- 7" through 24" dia. propellers are aluminum; 30" and 36" dia. propellers are galvanized steel
- OSHA-compliant gray polyester powder-coated wire guards

Fans are fully assembled with shutters and prepunched mounting holes; simply frame an opening and mount. UL and C-UL Listed.

Corrosion-Resistant Shutter-Mount Exhaust Fans

- Mount: vertical only
- Motors: totally enclosed, 115V, 60 Hz, thermally protected
- Max. inlet/ambient temp.: 104°F
- Fiberglass-reinforced polypropylene propellers
- OSHA-compliant epoxy-coated wire guards

Constructed with fiberglass shutter and frame and stainless steel hardware, for superior resistance to corrosive gases and vapors. UL and C-UL Listed.

Note: Not designed for laboratory hood exhaust or explosive atmospheres.

CANARM HVAC

Hazardous Location Direct-Drive Exhaust Fans

Vertical-mount fans require little maintenance and are easy to install. All models feature a totally enclosed, ball bearing motor with thermal overload protection. The fan blades are constructed of well-balanced, heavy-gauge aluminum. Designed with a rugged steel welded box housing that has a durable, powder-coated finish. The aluminum louver shutters are supported by long life nylon bushings. Heavy wire chrome-plated OSHA guards provide protection on intake side of fan. All fans are shipped assembled.

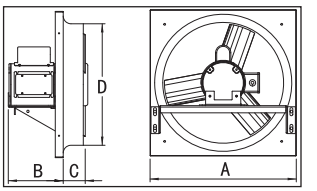
Find Quiet-Design Venturi Fans on page 2931.

Direct-Drive Venturi Exhaust Fans

- Mount: vertical With Intake Guards; vertical or horizontal Without Intake Guards
- Motors: totally enclosed air over, with Class B insulation
- Ball bearings, except sleeve bearings on Nos. 10D954 to 10D956
- Max. ambient temp.: 104°F
- Aluminum propellers
- Nos. 10D952 to 10D959 are speed controllable (No. 48C172 sold separately on page 2955)

Galvanized frame and finish. UL and C-UL Listed.

Note: OSHA-complying guards (included with select models) are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.



On Grainger.com®, search by Grainger Item Number and look for Optional Accessories or Related Products. Automatic shutters recommended.

Commercial Units—Quietly exhaust high volumes of air. Great for ventilating schools, offices, storage facilities, and light manufacturing and assembly areas.

Industrial Units—Exhaust larger volumes of air at higher static pressures. For use in factories, foundries, and other industrial environments.

Exhaust Fan Venturi Frames

- Mount: vertical or horizontal

Rigid galvanized steel frames have deep venturi and 1"W flanges. Nos. 10F477 to 10F479 include a zinc-plated guard; all others have slotted motor base and mounting bolts to accept 48 or 56 frame motors.

Note: Motors and blades are sold separately. For motors, see Index under Motors, Fan; for fan blades, see Fan Blades; for intake guards, see Guards, Fan.

Quiet-Design Direct-Drive Venturi Exhaust Fans

- Mount: vertical or horizontal
- Motors: totally enclosed air over, with Class B insulation
- Ball bearings
- 60 Hz
- Max. ambient temp.: 104°F
- Aluminum propellers

Galvanized frame and finish. For commercial and industrial applications. UL and C-UL Listed.

Note: OSHA-complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

For recommended accessories, go to Grainger.com®, search by Grainger Item Number and look for Optional Accessories or Related Products.

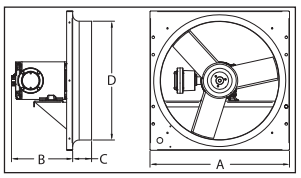
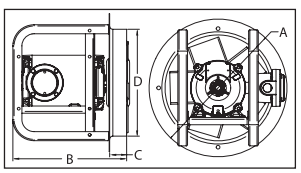
No. 10E049



Hazardous Location Direct-Drive Exhaust Fans

- Mount: vertical or horizontal
- Motors: explosionproof, fan-cooled enclosure with Class B insulation
- Hazardous location ball bearings
- Max. ambient temp.: 104°F



Fans ventilate spaces containing flammable or explosive vapors, gases, or dusts (per NEC 500). For use with NEC Class I, Division I, Groups C and D; NEC Class II, Division I, Groups F and G (No. 10E020 for Groups E, F, and G). Galvanized frame and finish. Spark-resistant aluminum propellers. Motorized damper and shutters are not recommended. UL and C-UL Listed.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Not for use with hazardous location exhaust applications. Review OSHA codes and UL standards. See index under Guards, Fan.

Consult local ventilation contractor or fire inspector for local code requirements. Do not use where motor or blades will accumulate paint residue. Electrically ground all components in hazardous location system.

Belt-Drive Supply Fans

- Mount: supply—vertical, exhaust—horizontal
- Regreasable pillow block ball bearings, except 60" blade dia. fans are regreasable cast pillow block; Nos. 3FKD4, 7CC26, and Nos. 7AC80 to 7AD15 have sealed pillow block
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance

Designed for commercial applications requiring high volumes of air at low static pressures. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motors, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered. More sizes available on Grainger.com®. Fans are UL and C-UL Listed.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards.

- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance

Designed for commercial applications requiring high volumes of air at low static pressures. Fans feature 6-blade galvanized-steel propellers, rigid drive-frame rails, and 1-pc. motor/bearing plate. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motor, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered. More sizes available on Grainger.com®. Fans are UL and C-UL Listed.

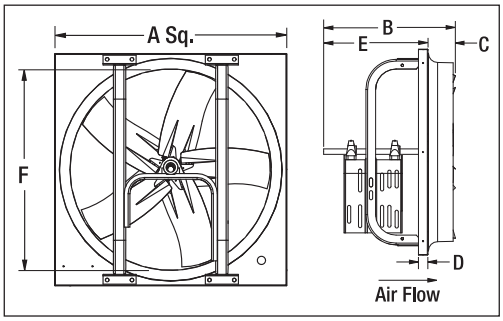
** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed.*



Medium-Duty Belt-Drive Exhaust Fans

Dayton

- Mount: exhaust—vertical, supply—horizontal
- Regreasable pillow block ball bearings, except 20" blade dia. fans have sealed pillow block
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance (except No. 1AHA7)

Designed for commercial and industrial applications requiring high volumes of air at low static pressures. Fans feature 5-blade reinforced galvanized-steel propellers, heavy-duty drive-frame rails, and 1-pc. motor/bearing plate. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motor, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered. Fans with motor and drive are UL and C-UL Listed.

Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

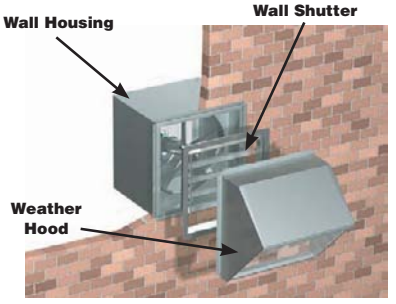
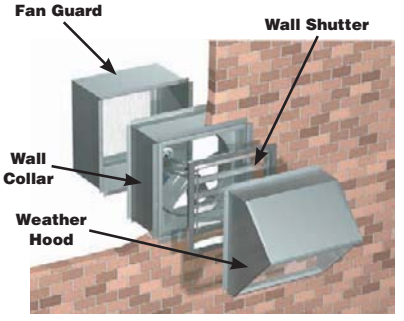
Heavy-Duty Belt-Drive Exhaust Fans

- Mount: exhaust—vertical, supply—horizontal
- Regreasable, cast pillow block ball bearings
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance (except No. 1AHB5)



Designed for commercial and industrial applications requiring high volumes of air at low to medium static pressures. Fans feature 6-blade heavy-duty cast-aluminum propellers, heavy-duty drive-frame channels, bearing plate, and motor plate. Air handling-quality bearings meet a minimum of L10-100,000 hours. Motor, sheaves, bushings, and belts are packed separately when complete fan with drive package is ordered. Fan is UL and C-UL Listed.



Note: OSHA complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed.*

Exhaust and Supply Fan Accessories

Galvanized steel accessories are for use with Dayton® belt- and direct-drive exhaust and supply propeller fans. Shipped unassembled; assembly hardware included.

Note: For wall shutters, see page 2936.

Wall Housings—OSHA-compliant screen completely protects motor drive side of fan.

Weather Hoods—Each includes bird screen.

Wall Collars—Internal flange for mounting shutters; external flange provides flashing for wall opening.

Fan Guards—OSHA-compliant screen completely encloses motor drive side of fan.

Note: OSHA-compliant guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See index under Guards, Fan.

Belt-Drive Wall-Mount Cabinet Exhaust and Supply Fans

- Fully assembled fan packages for through-the-wall installation
- Motors: open dripproof
- Regreasable cast pillow block ball bearings
- Max. inlet/ambient temp.: 104°F
- Variable pitch, adjustable motor pulley optimizes fan performance

Belt-drive fans are designed for commercial/industrial applications that require delivery of high volumes of air at low static pressures. Air handling-quality bearings meet a minimum of L10-100,000 hours. Features include galvanized steel fan panel, fabricated steel propeller, and bolted cabinets. Exhaust damper blade is top-pivoting gravity return; supply damper blade is bottom-pivoting spring return. Wall-mounting angles included. UL and C-UL Listed.

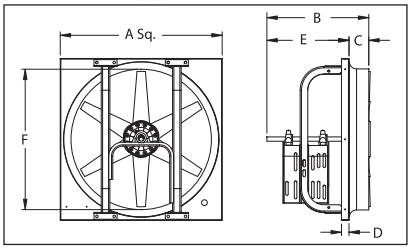
Reversible Belt-Drive Exhaust/Supply Fans



- Mount: vertical
- Regreasable cast pillow block bearings
- Max. inlet/ambient temp.: 104°F
- Variable-pitch, adjustable motor pulley optimizes fan performance

Designed for commercial and industrial applications requiring both supply and exhaust air. Fans feature 6-blade cast-aluminum propellers and rigid drive-frame rails. Motor, sheaves, bushings, belts, and reversing switch are packed separately when complete fan with drive package is ordered. Air handling-quality bearings meet a min, of L10-100,000 hr.

Note: OSHA-complying guards are required when a fan is installed within 8 ft. of floor, working level, or within reach of personnel. Review OSHA codes and UL standards. See Index under Guards, Fan.

Values are for installation type A: free inlet sone levels. ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed.*

Single- and Double-Panel Exhaust Shutters

- Exhaust only
- Mount: vertical
- Max. velocity: 2500 fpm
- 1½" flange

Efficient shutters for direct- or belt-driven exhaust fans are designed to prevent air backflow when the fan is off. Counterbalanced louvers with felted edges (except fiberglass models) open easily and seal quietly. Units with 54" and 60" galvanized and aluminum shutters have 4 additional tie rods on the discharge side for smooth, quiet operation.

G-90 Galvanized Steel Frame—For general purpose applications. 26-ga. mill-finish aluminum louvers with galvanized steel reinforcement strip. Stainless steel rivets. Frame depth: 2½" for 10" to 24" models, 3" for models 30" and up.

Extruded Aluminum Frame—For areas where corrosion may be a problem. Aluminum louvers have white enamel finish, galvanized steel reinforcement strip, and stainless steel rivets.

Fiberglass Frame—For use in areas where corrosion is a known problem, such as chemical plants and poultry/swine confinement operations. Heavy-duty fiberglass frame with stainless steel pins and bearings at pivot points. 3"-deep frame and 14-ga. tie rod, except 10" and 12" models have 16-ga. tie rod. Optional Shutter Motors Nos. 45C683, 45C664, and 45C665 can be used without additional motor setup; sold separately on this page.

Front-Flange, Extruded Aluminum Frame—For cabinet fans and flush-mount wall exhaust applications. Frame has G-90 galvanized steel tie rods and stainless steel rivets and pivot pins. Mill-finish aluminum louvers with galvanized steel reinforcement strip open easily and minimize load on the fan.

Stainless Steel Frame—For applications that require extreme corrosion resistance. Frame, louvers, tie rods, and all fasteners are stainless steel. Frame depth: 2". Shutter motors not available.

Optional Shutter Motors For Single-Panel Shutters—For exhaust installations on single-panel shutters only; vertical mount only. 6¾"H x 4"W x 4¾"D (installed depth from frame back). Actuator includes end switch. 100-240V, 2.0/1.3A, 50/60 Hz.

Optional Shutter Motors For Double-Panel Shutters—For exhaust installations on double-panel shutters only; vertical mount only. Dimensions include installed depth from frame back:

No. 24N065: 6½"H x 4"W x 6¼"D. 100-240V, 2.0/1.3A, 50/60 Hz. Actuator includes end switch.

No. 4C885: 9¾"H x 5⅞"W x 7¼"D. 100-240V, 0.25/0.20A, 60 Hz. Includes 6" leads with junction box.

Optional Pull Chain Kits—Adapt single- or double-panel exhaust shutters for manual operation. Each includes zinc-plated S-hooks, return springs, and 4-ft. pull chain.

High Velocity Single- and Double-Panel Exhaust Shutters

No. 4FZH4

- Exhaust only
- Mount: vertical
- Max. velocity: 3000 fpm
- 1½" flange

Designed to prevent air backflow in high-velocity applications when the fan is off. Mill-finish extruded aluminum frame and louvers with stainless steel tie rods and fasteners provide strength, durability, and long-lasting corrosion resistance. Prepunched mounting holes; installation hardware not included.

Optional Pull Chain Kits—Adapt single- or double-panel exhaust shutters for manual operation. Each includes zinc-plated S-hooks, return springs, and 4-ft. pull chain.

Agricultural Wall Exhaust Shutters

For direct- or belt-drive exhaust fans. Excellent for poultry and swine confinement operations and anywhere corrosion is a problem.

G-90 Galvanized Frame with Aluminum Louvers—Designed as replacement shutters for cone and slant-wall fans. Felted louvers with galvanized steel reinforcement strip open easily and seal quietly. G-90 galvanized tie rods and stainless steel hardware. Max. velocity: 2500 fpm. 9/32" x 1/2" mounting holes.

Extruded Aluminum Frame with PVC Louvers—Frame matches louver color. Yellow zinc dichromate rods running through the louvers provide long-lasting stability. Max. velocity: 1500 fpm.

Extruded Aluminum Frame with Aluminum Louvers—Constructed of extruded aluminum frames with roll-formed louvers and counterbalancing strips. Stainless steel fasteners provide excellent corrosion resistance in agricultural applications. Prepunched mounting holes. Max. velocity: 2500 fpm.

Door Louvers

Rugged metal construction is designed to allow air movement through doors while maintaining privacy and security. Retrofit or use as original equipment in 1⅜"- to 2¼"-thick wood or metal doors. Blades are inverted V-style, 45° angle. Clear-finish aluminum or gray-painted steel. Each includes installation screws.

Motorized Volume-Control Channel-Style Dampers

- 100 to 240V
- 50/60 Hz with end switch
- Exhaust or supply
- Mount: horizontal or vertical
- Max. velocity: 3500 fpm

Regulate airflow in medium- and low-pressure commercial applications. TPV louver seals and stainless steel jambs minimize leakage. Channel frames for installations inside walls or ductwork.

Actuator is internally installed. Mill-finish extruded aluminum frame (5" deep x 0.1" thick) and louvers (0.08" thick). Plated steel linkage and pivot pins.

Shutter Motor No. 2FTX6

Backdraft Dampers

For belt-drive centrifugal roof and wall ventilators. Max. velocity: 2000 fpm for models up to 19" and no-flange, 2250 fpm for 23" and larger.

WARNING: Not for use with kitchen exhaust applications.

ROOF-MOUNT

G-90 galvanized steel frame, 2" deep with 1" flange. Aluminum louvers, stainless steel pivot pins, nylon bushings, and felted edge. Prepunched conduit hole knockout.

WALL-MOUNT

16-ga. mill-finish extruded aluminum frame, 1½" deep with 1⅜" flange. Mill-finish aluminum louvers have galvanized steel reinforcement strip. Spring close for positive seal.

NO FLANGE, HORIZONTAL/ VERTICAL MOUNT

For use in roof curbs, ductwork, and wall collars when using a fan or power roof ventilator. G-90 galvanized frame is 2" deep. Mill-finish aluminum louvers. Stainless steel pivot pins and rivets, and nylon bushings. Prepunched conduit knockout.

Note: Models over 30" are horizontal-mount only.

OPTIONAL SHUTTER MOTORS

Motor packs expand options where standard 120/240 line voltage is not available. 60 Hz, 1-phase motors simplify installation by eliminating the need for transformers or other adaptations. Not for use with 8" roof curbs.

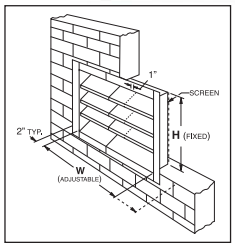
Fixed-Height Adjustable-Width Intake/Exhaust Louvers

Dayton®



Tabbed louvers lock securely into frame, providing smooth finish and clean appearance. 9/32" x 1/2" oblong mounting holes. Blades are set at a 45° angle, 4" spacing. Use multiple louvers when larger sizes are needed. Each includes 2"x 2" bird screen and fasteners.

G-90 Galvanized Steel—4"-deep G-90 galvanized steel frame has 2" flanges.

3003 Aluminum—4" deep, 0.04" aluminum frame has 2" flange.

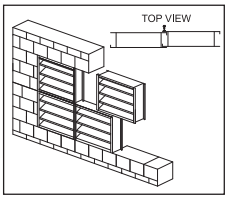
Fixed Intake/Exhaust Louvers

Dayton®



Modular units seamlessly fit together for custom openings. Channel style frame is 4" deep. Blades are positioned at approximately 45° and spaced approximately 4" center to center. Each unit includes pre-installed bird screen.

Galvannealed Steel—Very fine matte finish acts like a primer, easily accepts paint, and provides corrosion-resistance.

Aluminum—Strong, lightweight, and corrosion-resistant.

Drainable Blade Fixed Louvers

Dayton®

amca WORLDWIDE CERTIFIED RATINGS WATER PENETRATION AIR PERFORMANCE

Louvers—Designed to protect air intake and exhaust openings in exterior walls. 4" deep channel style frame and 0.090" thick extruded aluminum drainable fixed louver blades channel water away from the blades and down the jambs, eliminating water cascading from blade to blade. Includes 1/2" flattened aluminum birdscreen in removable frame mounted on interior.

Flange Kits—Flange kits speed installation by eliminating the need for site-fabricating flashing, while providing weather protection by covering small gaps in installations. Presized aluminum extrusion construction with prepunched mounting holes; mounting hardware included.

Combination Louver Dampers

Dayton®

amca WORLDWIDE CERTIFIED RATINGS WATER PENETRATION AIR PERFORMANCE

Louvers—Designed to protect air intake and exhaust openings from rain and weather while still providing excellent air flow. Mill-finish extruded aluminum drainable frame is 4" deep, 0.081" thick, and has 45° fixed louvers spaced on 4" centers, with pivoting dampers and TPV seals for weathertight closure. Includes 1/2" flattened birdscreen in removable frame mounted on interior. Standard manually-operated linkage kit for opening and closing. Optional motor kit sold separately.

Flange Kits—Flange kits speed installation by eliminating the need for site-fabricating flashing, while providing weather protection by covering small gaps in installations. Presized aluminum extrusion construction with prepunched mounting holes; mounting hardware included.

Optional Motors—Optional actuators automatically close damper if a power failure occurs.

No. 7F961 Shown with Drive Package

Dayton

amca CERTIFIED RATINGS

Belt-Drive Tubeaxial Fans

- Mount: vertical or horizontal
- Permanently lubricated ball bearings
- Max. inlet air temp.: 200°F
- Max. ambient: 104°F
- Precision-balanced, spark-resistant aluminum blades
- Belt guards
- AMCA Type B spark-resistant propellers (99-0401-86)
- Optional companion flanges are sold in pairs

Streamlined belt tunnel ventilates the drive compartment with air from outside the fan. Steel housing is iron phosphate-processed for rust protection; baked enamel paint finish. Factory installed cast-iron sheave is assembled on fan shaft. Motors and belts are packed separately when complete fan with drive package is ordered.

Note: These fans cannot be used if the environment surrounding them is not always free of flammable gases, vapors, or liquids; combustible dust; or ignitable fibers or flyings. Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and the National Fire Protection Act (NFPA).

OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel. Review OSHA Codes and UL Standards.

** Performance shown is for installation Type B: free inlet, ducted outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation Type B: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. †† 115V only. ‡ 230V only. ## 208/230V only.*

Direct-Drive Tubeaxial Fans

- Totally enclosed ball bearing motors
- Max. inlet/ambient air temp.: 104°F
- Precision-balanced aluminum propellers
- No. 1DGZ9 2-speed control is required for 2-speed models (except No. 4TM84); see Grainger.com®

Designed to efficiently move air in medium-length ductwork. Motor, blades, and housing are shipped assembled and operate in any position. Steel housing is coated with baked enamel finish. 115V, except No. 4TM84 is 230V, and Nos. 4TM85 and 2XZH2 are 200-230/460V, 3-phase. Tubeaxial fan discharge caps and curb caps sold separately on Grainger.com®. All fans are UL Listed.

WARNING: Not for hazardous location applications.

Belt-Drive Stainless Steel Tubeaxial Fans

- Mount: vertical or horizontal
- Permanently lubricated ball bearings
- Max. inlet air temp.: 200°F
- Max. ambient air temp.: 104°F
- Precision-balanced, corrosion-resistant stainless steel blades
- Belt guards
- Optional companion flanges are sold in pairs

Designed for food processing applications. Streamlined belt tunnel ventilates the drive compartment with air from outside the fan. Factory installed cast-iron sheave is assembled on fan shaft. Motors and belts are packed separately when complete fan with drive package is ordered. Tubeaxial fan discharge caps and curb caps sold separately on Grainger.com®.

Note: These fans cannot be used if the environment surrounding them is not always free of flammable gases, vapors, or liquids; combustible dust; or ignitable fibers or flyings. Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and the National Fire Protection Act (NFPA).

OSHA complying guards are required when fan is installed within 8 ft. of floor or working level, or within reach of personnel. Review OSHA Codes and UL Standards.

Silent Low-Profile Ceiling Fans

Dayton

- 115V
- Ceiling-mount; adjustable mounting brackets included
- 1-speed thermally-protected motor

Compact fans quietly exhaust moisture, odor, and heat from bathrooms, showers, rec rooms, meeting rooms, utility rooms, and offices. High-impact polystyrene grille securely fastens for rattle-free operation; concealed screws. (Optional lighted grille kits sold separately.) Rigid 24-ga. galvanized steel housing has integral backdraft damper. Each includes electrical junction box and disconnect. For adjustable rotary speed controls, see page 2955. UL Listed for use above bathtubs and showers when connected to a GFCI-protected branch circuit.

Ventilation Fans and Fan/Lights

Panasonic

No. 448F55

No. 448F60

- 120V
- Ceiling mount

Single fan with Pick-A-Flow™ speed selector for choosing desired CFM, and SmartFlow™ technology allows optimum CFM performance. Powerful, quiet, and ideal for new construction or replacement. Nos. 490X05 to 490X07 have a Flex-Z Fast™ bracket to ease installation, and a junction box for wiring in tight spaces. All models are UL Listed for use over a tub/shower enclosure when used with a GFCI protected circuit. Can be used to comply with ASHRAE 62.2, LEED, IAP, California Title 24 and WA Ventilation Code.

LoSone® Ventilators

BROAN

- Motors: low rpm, permanently lubricated
- 120V, except No. 4TR55 is 240V
- Optional accessories sold separately

Easy to wire from inside or outside of housing. Resilient motor mounts. Impact-resistant, balanced centrifugal blower wheel. UL and C-UL Listed, except In-Line Cabinet Ventilators are UL Listed only.

Insulated—Feature acoustic insulation and built-in automatic backdraft damper. Convertible from horizontal to vertical ducting. Can be field converted to in-line ventilation (adapter kits sold separately).

In-Line—Outlet duct connection includes dampers. Convertible from horizontal to vertical discharge. Same-size inlet and outlet ducts and removable access panel ease installation and service.

In-line Cabinet—Large-capacity in-line ventilators have acoustic insulation.

Insulated Ventilators

- Motors: 1-speed, thermally protected, 115V
- Adjustable mounting brackets included

Acoustic insulation absorbs sound for quiet, high-performance ventilation of bathrooms, meeting rooms, utility rooms, and offices. White grille and spring-loaded backdraft damper operates rattle-free. Exhaust outlet can be rotated from horizontal to vertical discharge, except for No. 3DPE4. External electrical access reduces installation time. Galvanized steel housing with electrical junction box and disconnect. Power assembly is removable. Adjustable rotary speed controls sold separately on page 2955. UL and C-UL Listed for above tub/shower when connected to a GFCI branch-protected circuit.

EC Motor Models— ★Dayton® Feature electronically commutated motors that provide up to 70% energy savings. Potentiometer dial on motor allows a wide RPM range to customize airflow. Optional EC Control Kits sold separately on page 2955.

**** Performance certified is for installation Type B: free inlet, ducted outlet. Performance ratings include the effects of an inlet grille and backdraft damper. † Speed (rpm) shown is nominal. Performance is based on actual speed of test. ‡ The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a spherical free field calculated per AMCA Standard 301. Values shown are for installation Type B: free inlet, spherical sone levels. Sones value for No. 36WG64 is <0.3/1.5/4.5. # ENERGY STAR qualified.***

In-Line Cabinet Ventilators

- Motors: 1-speed, thermally protected; open dripproof, except No. 5AE83 is totally enclosed
- Mounting brackets included

Large-capacity, insulated fans provide quiet multiple-area ventilation in commercial, institutional, or industrial settings such as utility rooms and bathrooms. Easy to wire with external electrical access cover. Spring-loaded backdraft damper eliminates vibration. The exhaust outlet rotates from horizontal to vertical discharge, except Nos. 6WZN3 to 6WZN5. The wheel is polypropylene, except aluminum on Nos. 5AE82 and 5AE83. Each includes electrical access knockouts, disconnect, junction box, and fan access panel. Adjustable rotary speed controls sold separately on page 2955. UL and C-UL Listed.

EC Motor Models— ★Dayton® Feature electronically commutated motors that provide up to 70% energy savings. Potentiometer dial on motor allows a wide RPM range to customize airflow. Optional remote-mount EC Control Kits sold separately on page 2955.

Centrifugal In-Line Duct Fans

- Mount: horizontally or vertically
- Bearings: ball
- Speed controls, designer grilles, and dampers sold separately, this page

Prewired fans have lower sound levels than comparable surface-mounted fans. Max. temp.: 140°F. Mounting bracket included. All are UL and C-UL Listed, except No. 2GKG4 is CSA Certified and ASHRAE compliant.

THERMOPLASTIC

External wiring box with waterproof gasket. UV protected. ENERGY STAR qualified.

GALVANIZED STEEL

Externally mounted wiring box, 3"L x 3½"W x 1½"D.

FG Series—Airtight housing. Backward curved impeller.

FKD Series—Mixed flow impeller. Nos. 6KVY5 to 6KVZ3 have sealed ball bearings.

RADON FAN

Higher pressure capabilities are designed for radon mitigation.

FAN CONTROL

Each has a 20-min. speed boost and 20-min. override. For Fantech fans only.

Mixed Flow In-Line Duct Fans

- 120V, 60 Hz
- Mount: horizontally or vertically
- Motor: totally enclosed
- Bearings: ball

Motor-impeller assembly can be removed without interfering with attached ducting. UL and C-UL Listed. HVI Certified. ENERGY STAR qualified.

TD-MIXVENT Series—Low-profile fans deliver excellent airflow-to-pressure ratio. Nos. 3CGA3 to 3CGA7 have thermoplastic casings and ABS plastic propellers. Nos. 3CGA9 and 3CGC1 have metal casings with epoxy-polyester coating and metal propellers.

TD-SILENT Series—Extremely quiet, low-profile fans have perforated inner skin with sound-absorbent insulation. Rubber gaskets on inlet and outlet absorb vibration. Thermoplastic casings and ABS plastic propellers.

Crawlspace and Basement Fans

Reduce humidity, mold, mildew, odors, and wood rot in crawlspaces and basements, and help reduce radon concentrations by ventilating these areas.

Crawlspace fans mount behind existing passive louvers and pull air from louvers on opposite walls. When using multiple fans, install to maximize cross-flow ventilation. Galvanized metal faceplate can be trimmed if necessary. All models include freeze protection thermostat and are ETL and C-ETL Listed for installation in damp locations.

Basement Fan No. 6KXZ0 installs in cut-out of rim joist or wall. 2 reversible fans provide either air supply, exhaust or balanced air exchange. Includes adjustable dehumidistat, 6-ft. power cord, and all mounting hardware. Use No. 6KXZ1 Duct Take Off Kit to duct air supply/exhaust to other rooms.

DETERMINE QUANTITY OF CRAWLSPACE FANS NEEDED

Calculate cubic area of crawlspace by multiplying L x W x H. Divide by 15 to determine minimum cfm needed to fully ventilate space in 15 min.

Example: 20W x 40L x 3 ft. H crawlspace = 2400 cu. ft.

2400 cu. ft. ÷ 15 min. = 160 cfm of ventilation.

Expandable/Flexible Aluminum Ductwork

▪ Internal/external temp. range up to 500°F

Made of strong, lightweight 0.005" aluminum alloy. Can be installed within walls, wall chases, or ceilings where inaccessibility requires a durable duct. Use in ventilation equipment for air and gas that is free of corrosive fumes or particles. UL Recognized (E60605).

Inside Dia.	L	Compressed Size	Mfr. Model	Item No.

Dryer Booster Fans

Use where dryer duct runs exceed 25 ft. equivalent.

Soler and Palau—Feature totally enclosed motor with Class F insulation and backward inclined wheel to overcome extreme pressure in tough installations. No. 6XAR4 has attached pressure switch. No. 6XAR5 has current sensor. Each includes mounting bracket. ETL Listed.

Tjernlund—Handles up to 150 equivalent ft. of duct: straight duct length plus 5 ft. per elbow. Auto-syncs with clothes dryer. 6-ft. grounded plug. Horizontal or vertical duct connection. External motor and lintproof blower. ETL and C-ETL Listed, UL Listed.

Fantech—Features a pressure sensing switch, LED indicator display panel with 50 ft. cable, temp. limit switch, mounting clamps, and 2 cleanouts for easy installation and maintenance.

REVCOR REVOLUTIONARY AIR FLOW™ Dayton

A/C Condenser Replacement Propellers

No. 2MTT2

No. 4DLJ3

No. 2RAU2

- Rotation facing discharge
- Embossed aluminum blades and spiders for strength and rigidity
- Hub-type propellers have ½" bore and include set screws (hub on intake side)
- Hubless propellers require interchangeable hex hubs (sold separately, this page)
- For low static pressure applications

For use with A/C condensers, heat pumps, heat exchangers, unit heaters, and power roof ventilators. OEM replacements for the aftermarket. Additional sizes available on Grainger.com®. For replacement condenser fan motors, see pages 44 and 53.

Shaded Pole C-Frame and Unit Bearing Motors

Dayton

- Max. ambient temp.: 40°C

For additional Shaded Pole C-Frame and Unit Bearing motors go to pages 38 and 39.

C-Frame Motors—For use in small fans and blowers found in bathroom ventilators, range hoods, electric heaters, hair dryers, slide projectors, air cleaners, humidifiers, and refrigeration equipment. UL Recognized and CSA Certified.

Note: This product is NOT SUITABLE for any unattended equipment (including built-in bathroom exhaust fans), unless the listed Thermal Protection is 1 Shot.

Unit Bearing Motors—Use with commercial and industrial HVAC and refrigeration equipment, and other applications.

Centrifugal Belt-Drive Upblast Exhaust Ventilators

- Aluminum, backward-inclined, nonoverloading centrifugal wheel design
- NEMA 1 junction box
- Max. inlet air temp.: 300°F
- Air handling quality bearings meet min. L10-100,000 hr.
- Bearings—units without drive package: sealed pillow block up to 16½" wheel dia., regreasable pillow block for 18½" wheel dia. and larger
- Bearings—assembled units: sealed pillow block up to 18½" wheel dia., regreasable pillow block for 21¼" wheel dia. and larger
- UL and C-UL 762 Listed Restaurant Exhaust Appliances

Designed for use in restaurants, schools, and commercial and industrial applications to exhaust contaminated air from kitchen range hoods up and away from roof. 1-pc. rolled aluminum wind-band is fully welded to base for virtually leakproof seal between the ventilator and the mounting surface. Internal steel support braces and a fully rolled windband dramatically increase the rigidity of the ventilator.

Motor, drive frame, and wheel are isolated from the mounting base by independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is isolated from the contaminated air stream and is cooled by outside air that is pulled in through an oversized breather tube by the spinning action of the wheel. Motors, sheaves, and belts are packed separately when unassembled ventilator with drive package is ordered.

Note: NFPA 96 requires the use of a ventilated roof curb, grease trap, clean-out port, and hinge kit in restaurant applications; for NFPA 96 accessories, see page 2962.

WARNING: Do not use a damper in any kitchen installation.

High-Pressure—Specifically designed for applications that have high static pressure.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. ††Nonkitchen dampers are not for use with any kitchen exhaust applications.*

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. ††Nonkitchen dampers are not for use with any kitchen exhaust applications.*

Roof-Mount

Wall-Mount (Round Mounting Plate Incl.)

Centrifugal Direct-Drive Upblast Exhaust Ventilators

- Aluminum, backward-inclined wheel
- Motor, drive frame, and blower wheel isolated from mounting base
- Motor compartment isolated from contaminated air
- Motor compartment isolated from contaminated air
- NEMA 1 junction box in motor enclosure (Hazardous units have NEMA 7 & 9 disconnect switch)
- UL and C-UL Listed

Note: Additional sizes available on Grainger.com®. Speed controllers available for 115V units only; see page 2955. For kitchen application, check with local code authorities for minimum duct velocities. Do not use dampers in any kitchen application. NFPA 96.

EC Motor—Electronically commutated motor can provide up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed controls allow manual fan speed adjustment from remote location; see page 2955.

3-Speed—Speed controllable on any RPM providing 30% useable turndown. UL 705 Listed for Power Ventilators.

1-Speed—UL 762 Listed Restaurant Exhaust Appliances (YZHW), except hazardous units.

Not for use with any kitchen exhaust applications. ** Performance certified is for installation type A: free inlet, free outlet. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels.

Speed Controls For Direct-Drive Fans & Ventilators

Nos. 48C172 and 48C173 can operate multiple direct-drive fans if total amp draw does not exceed control's amp rating. No. 43Y140 includes transformer and hardware. No. 35YV92 allows fan to operate between 2 speeds with SPDT switch or relay.

Type	Max. Amps	Voltage	Plate Color	Item No.
Solid State Speed Controls

Commercial Kitchen Exhaust Hoods

▪ 430 stainless steel construction ▪ Hoods are NSF Standard 2 Certified

Grease Hoods—Type I wall canopy hoods are used above grease-producing appliances such as fryers and griddles. Hoods feature integral 3" airspace for clearance to limited combustible materials. Each includes aluminum baffle grease filters, incandescent light fixtures, ½-pt. grease cup, hanger brackets, and exhaust collars. Rated for 600ºF maximum cooking operation temperature. UL and C-UL 710 Listed.

Condensation Hoods—Type II wall canopy hoods are used above moisture-producing appliances, such as dishwashers. Hoods include condensate baffles, gutter, ½" drain connection, hanger brackets, and exhaust collars.

Heat Hoods—Type II wall canopy hoods are used above heat-producing appliances (without grease) such as ovens. Hoods include hanger brackets and exhaust collars.

Air Supply Plenums—Introduce make up air to space near exhaust hood, minimizing the need to heat or cool make up air. Perforated panels evenly distribute airflow.

End Skirts—Mount on the sides of the exhaust hood to improve hood capture performance.

Digital Temp. Interlocks—Required by International Mechanical Code 507.2.1.1 on Type I grease exhaust hoods. Interlock automatically starts the exhaust fan when cooking occurs. Includes one temp. sensor. UL approved quick-seal for hood penetration and temp. controller.

Centrifugal Belt-Drive Upblast Exhaust Ventilators

Dayton

- Wall mount applications
- Aluminum, backward-inclined, nonoverloading centrifugal wheel design
- NEMA 1 junction box located in motor enclosure
- Max. inlet air temp.: 300°F
- UL 762 Listed Restaurant Exhaust Appliances

Designed for use in restaurants, schools, commercial, and industrial applications to exhaust contaminated air from kitchen range hoods. 1-pc. rolled aluminum windband fully welded to the base creates a virtually leakproof seal between the ventilator and the mounting surface. Internal steel support braces; round mounting plate included. Motor, drive frame, and blower wheel are isolated from the mounting base by the use of independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is isolated from the contaminated air stream and is cooled by outside air pulled in through an oversized breather tube by the spinning action of the wheel. UL and C-UL Listed.

Round-to-Square Base Adapters—Designed to adapt a standard round fan base to an existing square installation. Allows an existing installation to be used when replacing a ventilator. Constructed of galvanized steel. Flange surface is 1¾".

Wall-Mount
(Round Mounting Plate Incl.)

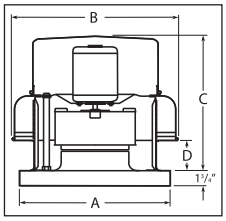
**** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed.***

No. 4YC64

Centrifugal Direct-Drive Downblast Exhaust Ventilators



- For general clean air exhaust
- Aluminum backward-inclined, nonoverloading centrifugal wheel design
- Motor compartment isolated from air stream and cooled by outside air
- NEMA 1 junction box
- Max. inlet air temp.: 130°F
- UL-705 Listed for Power Ventilators

EC Motor—Feature electronically commutated (EC) motors for up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed control kits allow manual fan-speed adjustment from a remote location, see page 2955.

3-Speed—Fully controllable on any selected speed. Speed control allows for 30% useable turndown.

1-Speed—Class B insulation and single-speed motors are fully speed controllable at 115V only.

** Performance certified is for installation type A: free inlet, free outlet. Performance ratings include the effects of a bird screen in the airstream. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet fan sone levels. ** 115/230V, speed controllable at 115V only.*

Centrifugal Belt-Drive Downblast Exhaust Ventilators

Dayton

- Aluminum, backward-inclined, nonoverloading centrifugal wheel design
- NEMA 1 junction box located in motor enclosure
- Max. inlet air temp.: 180°F
- UL-705 Listed for Power Ventilators
- Air handling quality bearings meet min. L10-100,000 hr.
- Bearings—units less motor and drive: sealed pillow block up to 16¾" wheel dia., regreasable pillow block for 18½" wheel dia. and larger
- Bearings—assembled units: sealed pillow block up to 18½" wheel dia., regreasable pillow block for 21½" wheel dia. and larger

Designed to meet the general clean air exhaust requirements for industrial and commercial buildings. Rugged and reliable construction makes fan capable of withstanding severe exhaust conditions. Spun aluminum construction features a fully rolled windband bead for increased stability and easy transport. Fresh outside air is drawn in under the motor cover to maximize motor life. Drive frame is internally isolated from the rest of the unit through use of neoprene isolators for long life and quiet operation; no steel-to-steel contact. Motors, sheaves, and belts are packed separately when complete, unassembled ventilator with drive package is ordered. UL and C-UL Listed.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a birdscreen in the airstream. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A, free inlet fan sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ Smaller base. †† 115/230V.*

Hazardous Location Centrifugal Belt-Drive Exhaust Ventilators

- Aluminum, backward inclined, nonoverloading centrifugal wheel design
- Air handling-quality bearings meet min. L10-100,000 hr.

Designed to exhaust air in commercial and industrial applications with potentially hazardous particles or fumes. Constructed with spark-resistant aluminum wheel and rub ring. Spun aluminum housing features rolled wind band to increase stability. Motor, drive frame, and wheel are isolated from the mounting base by independent neoprene studs—no metal-to-metal contact, greatly reducing overall noise. Motor compartment is cooled by fresh outside air, maximizing motor life. Motors, sheaves, belts, and conduit kit are packed separately when unassembled ventilator with drive package is ordered.

Warning: Nonhazardous location ventilators are not interchangeable with hazardous location ventilators.

Note: Installation must comply with all local and national safety codes including the National Electrical Code (NEC) and National Fire Protection Act (NFPA).

UPBLAST VENTILATORS

- Motor only UL Listed for Class I Groups C & D and Class II Groups E, F & G hazardous locations
- Max. inlet air temp.: 300°F
- Bearings: sealed pillow block up to 16½" wheel dia.; regreasable pillow block for 18½" wheel dia. and larger

DOWNBLAST VENTILATORS

- Motor only UL Listed for Class I Groups C & D and Class II Groups E, F & G hazardous locations
- Max. inlet air temp.: 180°F
- Bearings—sealed pillow block up to 16¾" wheel dia.; regreasable pillow block for 18½" wheel dia. and larger

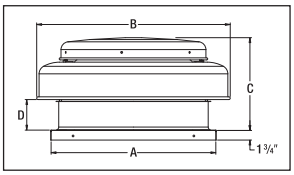
** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include the effects of appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, conduit kit, belts, and sheaves to obtain performance listed.*



Axial Direct-Drive Downblast Exhaust and Supply Ventilators

- NEMA 1 junction box in motor enclosure
- Max. inlet air temperature: 120°F
- UL-705 Listed for Power Ventilators
- Units with 10" and 12" propeller diameter are wall- or roof-mountable

Provide steady exhaust or supply of clean air under low-to-moderate static pressures. Spun aluminum construction, with fully rolled bead on the windband, for stability and rigidity when lifting and transporting. Many models are speed-controllable; Nos. 4YC52, 4YC54, 4YC60, and 4YC62 are only speed-controllable at 115V. UL and C-UL Listed.

EC Motor—Nos. 39FV53 to 39FV56 feature electronically commutated (EC) motors, providing up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. Optional speed control kits let you adjust fan speed from a remote location; see page 2955.

** Performance certified is for installation type A: free inlet, free outlet. Performance ratings include the effects of a bird screen in the airstream. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation type A: free inlet hemispherical sone levels. ** Speed controls usable at 115V only. † 115/208-230V.*

Axial Belt-Drive Downblast Exhaust Ventilators

- NEMA 1 junction box in motor enclosure
- Max. inlet air temperature: 120°F
- UL-705 Listed for Power Ventilators
- Air-handling quality bearings are selected to meet a minimum of L10-100,000 hr.
- Regreasable pillow block bearings

Provide steady exhaust of clean air under low-to-moderate static pressures. Spun aluminum construction, with fully rolled bead on the windband, for stability and rigidity when lifting and transporting. UL and C-UL Listed.

Performance ratings include the effects of a bird screen in the airstream. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed.*

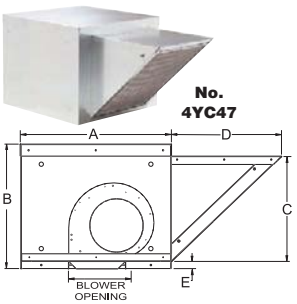
Supply Or Make-Up Air Ventilation

The total amount of air supplied is approximately 100% of the air exhausted. Insufficient make-up air in the kitchen can create hood capture problems. There are two general types of make-up air, untempered and tempered. Here are some things to consider when selecting the supply portion of your kitchen ventilation system.

- **A slight negative pressure is desirable in a kitchen to keep odors out of the dining room (should not exceed 0.02" static pressure)**
- **Make-up air must be supplied at ±10°F from air in the space**
- **Use non-directional perforated diffusers (4-way diffusers are not recommended in kitchen applications)**

Untempered filtered supply ventilators are the most economical solution if heating or cooling is required and all codes can be met. Untempered air should be supplied near the hood at low velocities so it can be exhausted quickly without mixing in the space, causing discomfort and increasing heating/cooling costs.

Tempered direct-fired make-up air heaters provide the best comfort in the kitchen. Supply tempered air through a source that will distribute air throughout the kitchen to increase comfort. Northern climates almost always require heated make-up air.



INSTALLATION

NFPA 96

- **Intake must be a minimum of 10 ft. from exhaust ventilator,**

Or

- **Exhaust ventilator discharge must be a minimum of 36" higher than intake**

Centrifugal Belt-Drive Filtered Supply Ventilators

- **Max. inlet air temp.: 120°F**
- **UL 705 Listed for Power Ventilators**
- **Air handling-quality bearings meet min. L10-100,000 hr.**
- **Bearings: sealed pillow block (20½" units are regreasable pillow block)**

Supply untempered, filtered makeup air to commercial and institutional buildings, or in commercial kitchen applications. Heavy-gauge galvanized steel construction. Neoprene isolators, lifting lugs, and weather hood with removable 1" aluminum washable filters. Nos. 4YC82 and 4YC47 can be wall- or roof-mounted. Nos. 4YC83, 5AU56, and 5AU57 are roof-mount only. Motor, belts, and sheaves are packed separately when complete ventilator with drive package is ordered. UL and C-UL Listed.

** Performance certified is for installation type B: free inlet, ducted outlet. † Power rating (BHP) does not include transmission losses. Performance ratings include the effects of a filter. # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA Standard 301. Values shown are for installation in Type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed.*

No. 4HX61

NFPA 96 Required Accessories

Ventilated Roof Curbs—Ventilate hot exhaust ducts in commercial kitchen applications, protecting buildings and roof members. Galvanized steel curbs allow for quick ventilator installation and uniformity throughout the job. Fixed curbs are 18 ga.; adjustable curbs are 16 ga. Flat-flashing flange mounts directly to roof surface. Top flange surface is 1¾" wide. For use with NFPA 96, UL 705, and UL 762 applications.

Curb Height (in.)	Outside Square (in.)	Inside Square (in.)	Use w/Dayton Ventilators	Item No.

18	44½	41	46" Sq. Base	4HX60

Grease Collector Box—Diverts and collects heavy grease residue while protecting roof surface. Fastens directly to curb underneath ventilator and includes connection from ventilator drain to Grease Box. Required for NFPA 96 and UL 762.

Hinge Kits—Allow ventilators to swing back to expose the entire fan for cleaning and inspection, making maintenance easier. Includes retaining cable and hardware kit. Upblast Hinge Kits are required for NFPA 96 and UL 762.

Clean-Out Port Kit—Retrofits ventilator with a cleanout port for access to the ventilator wheel through the windband. Required for NFPA 96. Includes removable plug and hardware. Required for NFPA 96 and UL 762.

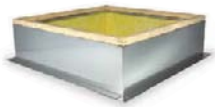
Nonventilated Roof Curbs

Prefabricated, leakproof curbs provide compatibility between ventilator, curb, and roof opening on commercial and industrial buildings. Most include 1" insulation and integral damper tray. Adjustable curbs are shipped unassembled.

Canted—For flat, noninsulated roof decks with thick or rigid roofing material. 18-ga. galvanized steel body construction with fully welded corners. Fixed curbs include 1½" wood nailer.



- For noninsulated metal, concrete, or wood roof decks
- For built-up asphalt or coal tar roofing materials

Straight-Sided—For flat roof decks with up to 6" of insulation. Roll-formed with 18-ga. galvanized steel and 1 welded side for added strength. Fixed curbs include 1½" lap-joint wood nailer.

Hooded Axial Belt-Drive Roof Ventilators

- Max. inlet air temperature: 104°F

Designed for roof-mounted exhaust or supply of clean air in factories, warehouses, and other large facilities. Heavy-gauge galvanized steel construction features hinged hood with bird screen, providing convenient access to motor and drives. Strong, weathertight hood is constructed of interlocking arched galvanized panels. Bird screen and hood come preassembled (except 54" and 60" sizes). Base requires field assembly with hardware provided. Housing, fan, and drive packages are shipped separately. Reversible exhaust/supply ventilators include wall-mounted reversing switch.

Dayton®

Hooded Gravity Roof Ventilators

Designed for nonpowered ventilation or can be used in conjunction with powered exhaust, supply, or reversible fans. Strong, weathertight hood is constructed of interlocking, arched, galvanized steel panels. Bird screen and hood come preassembled (except 54" and 60" sizes). Base requires field assembly with included hardware.

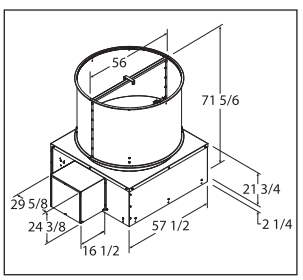
Axial Belt-Drive Upblast Exhaust Ventilators

- UL-705 Listed for Power Ventilators
- Max. inlet air temperature: 120°F
- Air handling quality bearings are selected to meet a minimum of L10-100,000 hr.
- 24" propeller dia. units feature sealed pillow block bearings
- 30" propeller dia. and larger units feature regreasable pillow block bearings



For use in industrial and commercial buildings, including warehouses, manufacturing facilities, foundries, and laboratories. Units are highly weather resistant, with housings constructed of heavy-gauge galvanized steel, bolted seams, and reinforced edges for added strength. Drive frames are die-formed, galvanized structural steel, providing a rigid platform for motors, shafts, bearings, and drives. Fabricated steel propellers have steeply pitched blades to generate low sound levels. Integral butterfly dampers prevent unwanted backdrafts and have magnetic latches to minimize damper flutter when not in use. Built-in lifting lugs speed installation; the windband is removable for easy inspection. UL and C-UL Listed.

** Performance certified is for installation type A: free inlet, free outlet. † Power rating (BHP) does not include transmission losses. Performance ratings do not include appurtenances (accessories). # The sound ratings shown are loudness values in fan sones at 5 ft. (1.5m) in a hemispherical free field calculated per AMCA standard 301. Values shown are for installation Type A: free inlet hemispherical sone levels. ** Drive package consists of appropriate motor, belts, and sheaves to obtain performance listed. ‡ 230V only.*

Emergency Smoke Exhaust Ventilators

- Spring-loaded damper lifters meet UL-793 Snow Load Rating
- UL Listed for Emergency Smoke Control
- Max. inlet air temperature: 120°F continuous operation; 500°F for 4 hr.; 1000°F for 15 min.
- High-temperature regreasable pillow block bearings

For use in industrial and commercial buildings such as manufacturing facilities, foundries, and laboratories. Heavy-gauge, galvanized steel fans feature a 165°F fusible link on damper lifters. Belt tubes have heat shields. Magnetic damper latches prevent positive pressure from lifting dampers. Windbands have lifting lugs. Roof curb required for new installations. UL and C-UL Listed.

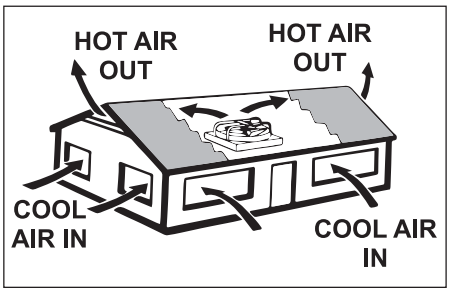
Dayton



Assembled Whole House Fans

- Mount: horizontal
- Thermally protected, 2-speed motors
- 115V/60 Hz
- Preassembled wood frame

Effectively cool and ventilate an entire home by removing hot, humid air through the attic and drawing in cooler air from outside. Gasket between the venturi and plenum box reduces noise. Painted steel housing. Belt drive models have automatic belt tensioning system which eliminates manual belt adjustment. All models include 2-speed wall switch with 12-hr. timer. Fans are UL and C-UL Listed.

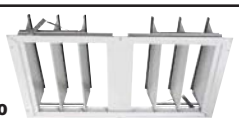
AirKing Ventilation Products®

20" Whole House Fan



- 120V/60 Hz
- Electrically reversible for air intake or exhaust
- ETL Listed and OSHA-compliant guards
- 6-ft., 18/3-cond. power cord with integrated safety plug

Can be mounted on inside or outside of window trim to provide air movement where permanent attic-mounted ventilating fans cannot be installed. Storm Guard® allows window to be closed behind fan during inclement weather. Extender side panels fit windows 27" to 38"W x 26¼"H. Fan is not intended for use in commercial cooking, foundries, or industrial applications with exposure to dust-laden atmospheres or extreme ambient air temperature. Tested to AMCA standard 230.99.

Gable Shutters

Dayton

- Max. velocity: 1500 fpm
- 1½" flange

Designed for use with gable-mounted power attic ventilators. Shutters are not for use with solar-powered, automatic gable-mount attic ventilators. Aluminum construction. Flush mount for easy installation. Automatically open when ventilator is running. Weather stripping on blades for positive seal when not in use. Tie rods on blades assure uniform opening while fan is operating.

No. 4YN20

How to Select Power Attic Ventilators

For proper attic ventilation, the Home Ventilation Institute recommends a system that provides at least 10 air exchanges per hour. Use the following formula to determine the fan capacity (cu. ft. per min., cfm) needed to provide this minimum airflow:

Attic Square Feet x 0.7 = cfm

Note: For roofs pitched 7/12 or higher, you may want to add 20% more cfm capacity to handle the larger volume of attic space; 30% more for roofs 11/12 and higher.

No. 10N201

Dayton BROAN

Automatic Roof-Mount Attic Ventilators

- **Motors: thermally protected, 120V/60 Hz**

Blend into most roof designs and save energy costs by circulating air, cooling the attic, and reducing overall air conditioner strain. UL Listed.

Dayton® Commercial/Industrial-Duty Air Curtain Selection Guide

Because no single air curtain cabinet is 100"W, use 1 No. 6E822 (60") and 1 No. 6E824 (42") to span a 100"W opening. It is acceptable for cabinets to be slightly wider than the opening. Each cabinet requires a blower assembly.

Use Table A to determine the horsepower (HP) of the blower required for your air curtain cabinet. Blower HP is determined by mounting height, purpose of the air curtain (thermal barrier, etc.), and the wind speed that the air curtain is expected to neutralize.

For extreme conditions (gusty winds or heavy insect control), select a blower HP 1 size larger than what the table recommends. Indoor installations assume a wind speed of 5 mph, unless otherwise specified.

After selecting the HP for your application, use Table B to find the blower stock number that matches the available electrical power. See this page for complete electrical specifications for each blower. Air curtain overlap of door openings is acceptable.

Blower Selection Example

Assume a 10-ft.-high x 100"-wide opening into a walk-in cooler, and an available 120V, 1-phase electrical circuit to operate the air curtain.

In Table A, find **Walk-In Cooler**. In column labeled **10 ft.**, find ½ HP across from 5 mph wind speed (indoor installations assume 5 mph). Knowing that a ½-HP blower is required, use Table B to find 2 possibilities: No. 6E820 and 6E817. Select 2 No. 6E820 blower assemblies (120V, 1-phase), 1 for each cabinet.

Wind Speed (mph)	Thermal Barrier 8 ft.	Thermal Barrier 10 ft.	Insect Control 8 ft.	Insect Control 10 ft.	Walk-In Cooler 8 ft.	Walk-In Cooler 10 ft.	Walk-In Freezer 8 ft.	Walk-In Freezer 10 ft.

Dayton

Compact and Drive-Through Window Air Curtains

- 120V
- Each unit is complete with blower

COMPACT

For transoms and other openings requiring a thermal barrier. Use up to 3 curtains in series for wider spans. Maximum distance from nozzle to floor is 8 ft. 120V 2-speed motor. 2-speed switch included. ETL Listed.

DRIVE-THROUGH WINDOW

Prevents entry of dust, fumes, and insects. Great for service windows 30" wide or less. Maximum distance from nozzle to counter is 5 ft. 120V single-speed totally enclosed motor. 3-prong grounded plug. ETL Listed.

No. 4YP01

Air Curtains

Provide a sustainable solution that helps lower energy costs by eliminating untempered outside air from entering through open doors. A sanitary solution that deters flying insects from entering through open doors. Models use an invisible air barrier to protect the opening and are safer than plastic vinyl strip curtains.

Drive-Through Window, Unheated and Drive-Thru Window, Heated—Air curtains help reduce infiltration of fumes and insects, and maintain comfort at drive-up windows. UL and C-UL Listed for indoor use.
- Corded models

Low-Profile, NSF 37, Unheated and Low-Profile, 2-Speed, Heated—Help increase energy savings, comfort, and insect control. Heated models for front or rear entry doors; unheated units for rear entry doors. Heated models are UL and C-UL Listed for indoor use; unheated models are UL and C-UL Listed for indoor/outdoor use and UL-EPH Listed per NSF Standard 37.
- Hardwired

Multipurpose, NSF 37, Unheated and Multipurpose, 3-Speed, Heated—Provide energy savings, comfort, and insect control. Heated models for front or rear entry doors; unheated units for rear entry doors. AMCA Certified air performance. Heated models are UL and C-UL Listed for indoor use; unheated models are UL and C-UL Listed for indoor/outdoor use and UL-EPH Listed per NSF Standard 37.
- Hardwired

Multipurpose, High Velocity, Unheated—Block entry of wind and insects, and help increase energy savings and comfort. Ideal for shipping/receiving and loading dock doors. AMCA Certified air performance. UL and C-UL Listed for indoor use; UL listed for outdoor use.
- Hardwired

dBA is measured in free air 10 ft. from the nozzle.

Air Curtains

- Hardwired unless specified
- Require field-supplied hardware
- 5-yr. manufacturer's warranty for unheated units, 18 months for heated units
- ETL and C-ETL Listed

No. 32V336

Heated and unheated models help cut utility bills, keep the environment clean, and deter dust, flying insects, and pollutants. Rugged construction, easy to install, and have a manufacturer's warranty. The air curtain design provides consistent performance, maintains consistent temperatures, and reduces loss of conditioned air. Offer greater efficiency compared to plastic strip curtains.

LOW PROFILE, LPV2 SERIES

- 115V models have 3-prong grounded plug; all others are hardwired
- Mounting plate included
- LPV2 models include variable speed control

Sleek, quiet, compact, 1/6 HP design for front entry doors and drive-through windows.

Heated models help you create a more comfortable work area by providing a warm protective barrier over openings exposed to low ambient temperatures. NSF 37 models are ideal for food preparation areas and are sanitation-certified for heights up to 7 ft. per NSF Sanitation/ANSI 37 standard. Models greater than 72" are double units joined with a 2" mounting bracket and must be center supported.

Multipurpose, Recessed
No. 10N078

MULTIPURPOSE

- STD2, N2, NH2, HV2 unheated models are AMCA rated

Heated models provide a comfortable work area with warm protective barrier over openings exposed to low ambient temperatures. Feature durable energy-saving performance and fasten to a wall on both ends without intermediate support. Three-phase models require a motor control panel, sold separately. NSF 37 models are ideal for protecting food preparation areas and are sanitation-certified for heights up to 7 ft. NSF filters available on Grainger.com®. Heated models and 3-phase models are ETL and C-ETL Listed.

Recessed—Mount in ceiling. Minimal equipment visibility. Recessed housing enclosed.

CONTROL PANELS AND DOOR LIMIT SWITCHES

Required Motor Control Panels for 3-Phase Air Curtains—HOA switch included with panel. Auto mode requires optional door limit switch No. 2CLA2 (UL, NEMA 1) to provide automatic On/Off as door opens/closes, sold separately on Grainger.com®.

- Control panels have NEMA 1 enclosure

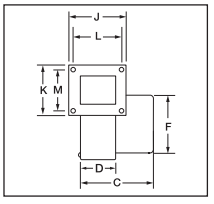
dBA is measured at 10 ft. from the nozzle in an open field. STD2, PH10, N2, NH2, and HV2 are CFM ratings shown and are based on tests and procedures performed in accordance with AMCA Publication 211.

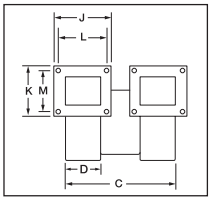
Blower w/ No Mounting Flange, No. 1TDP4

Blower w/ Mounting Flange, No. 1TDR3

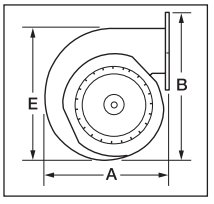
Double Blower with Mounting Flange, No. 1TDP8



30 to 312 CFM PSC, Shaded Pole, and DC Blowers, Rectangular Outlet



- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F
- Motor enclosure: open



Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain CFM at higher static pressures. Motors have cast-aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life. All blowers are CE Certified and RoHS compliant. All motors (not blowers) are UL and C-UL Recognized (E47479), except Nos. 2C646, 3FRG7, 3FRG8, and 3HMH7 are not UL or C-UL Recognized.

Note: Not for use with speed controllers.

Dayton®

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F
- Motor enclosure: open

Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain CFM at higher static pressures. Motors have cast-aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life. All blowers are CE Certified and RoHS compliant. All motors (not blowers) are UL and C-UL Recognized (E47479), except Nos. 3FRG5 and 3FRG6 are not UL or C-UL Recognized. Note: Not for use with speed controllers.

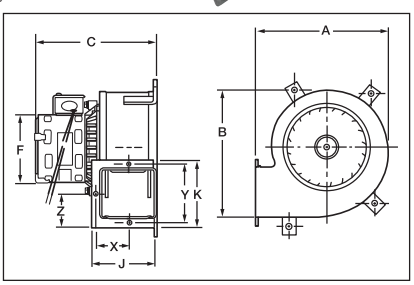
Dayton®

High-Temperature PSC Blowers, Rectangular Outlet

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Continuous-duty operation
- Max. inlet air temp.: 450°F
- Max. ambient: 104°F
- Motor insulation: Class B



Externally mounted cooling fan (between motor and blower wheel) keeps motor cooler for a longer service life. Durable motor/blower design features ball bearings, cast-aluminum end shield, rolled steel body, and a steel cooling fan. Permanent split capacitor motor operates more efficiently than a comparably sized shaded pole motor. Blower housing has side mounting tabs and 3-sided mounting flange, except No. 1TDV1 has no outlet mounting flange. High-temperature flat black enamel finish. Excellent for general heating, cooling, ventilating, or component cooling. All blowers are CE Certified and RoHS compliant. All motors (not blowers) are UL and C-UL Recognized (E47479).

No. 1TDV1

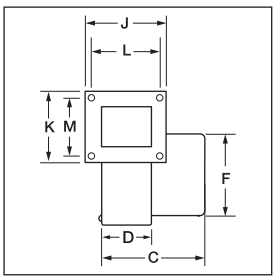
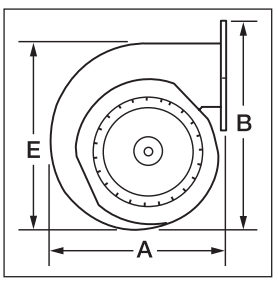
OEM Specialty PSC and DC Blowers

- Direct replacements for many OEM blowers with same physical footprint
- All-position mounting
- Min./max. operating temp. range: -20° to 104°F
- Max. inlet and ambient temp.: 104°F

Powerful direct-drive blowers with forward-curve wheels provide economical air delivery for general heating, cooling, ventilating, or component cooling. Dynamically balanced blowers provide smooth and quiet operation. Noise and vibration are held to a minimum to maintain cfm at higher static pressures. Motors have cast aluminum end shields for greater heat dissipation and protection, resulting in less downtime and longer service life. Gray enamel finish.



Blowers without outlet flange can use No. 5TCJ3 housing support for mounting. 2-speed blowers require No. 1DGZ9 2-speed switch (not included; see page 2929). All blowers are CE Certified and RoHS compliant. All motors (not blowers) are UL and C-UL Recognized (E47479), except Nos. 3HMH9, 3HMJ1, and 3HMJ2 are not UL or C-UL Recognized.



Note: Not for use with speed controllers.

PREPUNCHED METAL HOUSING SUPPORT

Enables base mounting Nos. 1TDT4, 1TDT5, 1TDT9, 1TDU1, and 1TDU2 for bottom horizontal, top horizontal, and upblast discharges. 12¾"L. Gray finish. Sold in pairs.

Transflow and Low-Profile Blowers

- All-position mounting
- Continuous-duty operation
- Min./max. operating temp. range: -20° to 104°F
- Motor insulation: Class B
- Automatic thermal protection

Blowers provide economical air delivery for general heating, cooling, ventilating, or component cooling. Designed to exhaust or ventilate cabinets, office machines, electronic equipment, corn stoves, pellet stoves, and fireplace inserts. All blowers are CE Certified and RoHS compliant. All motors (not blowers) are UL and C-UL Recognized (E47479).

Transflow—Heavy-duty, shaded-pole motor (permanent split capacitor on Nos. 3HMK2 and 3HMK3) features an oversized stack to enhance cooling and product life. Durable metal cooling-fan blade. Extruded aluminum, 1-pc. housing keeps blower wheel and motor properly aligned—reduces vibration. Permanently lubricated sleeve bearings on motor (Nos. 3HMK2 and 3HMK3 have permanently lubricated ball bearings) and blower housing significantly reduce motor hum transmission into equipment. 13" leads. Nos. 3HMK2 and 3HMK3 feature open dripproof motor enclosure.

Low-Profile—Forward curve centrifugal blower wheels, mounted in twin scroll housings, provide increased airflow at higher pressures. Double inlet maximizes airflow efficiency. Ball bearings and cast-aluminum end shields connect blower to heavy-duty, permanent split-capacitor Dayton® motor. 6 rubber isolators on mounting holes reduce vibration and noise. Flat black finish; compact design. 17" leads.

Dayton

Single-Inlet Forward-Curve Belt-Drive Blowers

- Housing can be rotated to any of 4 standard discharge positions
- Max. inlet air temp.: 150°F
- Max. ambient: 104°F

Single inlet for quiet, efficient performance in general ventilation, exhausting, air conditioning, and industrial air-moving applications. Precision, balanced, forward-curved steel wheels. Die-stamped steel housing. Single-phase motors have automatic reset thermal protection. Drive package components are packed separately.

Housing Supports

For Use With Blower Housing	Item No. Supports
1XJX7	5TCJ2
1XJX8 & 1XJX9	5TCJ3

Direct-Drive Double Inlet Full- and ¾-Width Forward-Curve Blowers

- Blower wheel is reinforced to ensure optimal performance and trouble-free service
- Discharge can be rotated in four 90° increments
- Units replace most direct-drive blowers with the same horsepower ratings
- Max. inlet/ambient temp.: 104°F

Used in new and replacement installations for heating, air conditioning, and ventilation systems. Heavy-gauge steel blower housings have a galvanized steel finish, except assembled models have a gray enamel finish. Steel wheels have corrosion-resistant finish.

UNASSEMBLED

Units include housing support with resilient pads, adjustable motor mounting bracket with hardware, and assembly instructions. Bracket for 9½" units adjusts to fit blower motors 3½" to 6⅛" long. Bracket for 10⅝" units adjusts to fit blower motors 3 13/16" to 6⅝" long.

WARNING: Motor overload will result if blower is operated at static pressures below performance shown.

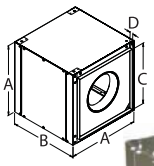
Double Inlet Full- and ¾-Width Forward Curve Belt-Drive Blowers

Dayton

- Max. blower operating temp.: 150°F
- Max. motor operating temp.: 104°F
- Discharge can be rotated in four 90° increments

Prelubricated, sealed ball bearings with rubber isolators and dynamically balanced forward curved wheel. Precision-ground shafting with both keyways and flats for a wide range of drives and HP. A variable-pitch motor sheave is provided when ordered, complete with drive package for speed adjustment. Die-stamped steel housing with mounting supports. Mounting hardware and isolation grommets included. Blowers include a motor mounting bracket built for 1½ HP maximum. 1/6- to 1½-HP motor and drives for bottom horizontal discharge packed separately, when ordered complete. Longer or shorter belt may be required for other discharge positions. 2- to 5-HP motors are floor mount only.

1/6 to 1½ HP with Drive Package, Shown Assembled



2 to 5 HP with Drive Package, Shown Assembled

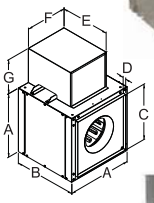
WARNING: Motor overload will result if blower is operated at static pressure below performance shown. ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed.

In-Line Duct Blowers



Direct-Drive

- Aluminum backward-inclined, nonoverloading centrifugal wheel design
- Mount horizontally or vertically
- Max. ambient: 104°F

Designed for indoor clean-air applications including intake, exhaust, return, or makeup air systems in industrial or commercial buildings. Collars simplify duct connections. Panels on each side provide quick access to internal fan components. UL 705. UL and C-UL Listed.

Direct-Drive—Units are speed controllable. Nos. 2RB86, 10C387, and 10C388 have 3-speed motor. Units are pre-assembled.

Belt-Drive

Nos. 20UD15 to 20UD17 feature electronically commutated (EC) motor on the blowers, providing up to 60% energy savings. Potentiometer dial on motor allows speed control down to 80%. The optional Speed Control Kit No. 43Y140 (sold on page 2955) allows you to manually adjust a fan's speed from a remote location and mounts to a wall using a 2x4 junction box.

- Max. inlet air temp.: 104°F
- Include NEMA 1 junction box

Belt-Drive—Drive package components packed separately.

- Bearing cover and motor cover provide longer service life
- Max. inlet air temp.: 160°F
- Pillow block bearings

DELHI

Centrifugal In-Line Belt-Drive Duct Blowers and Filters

- Ball bearing motors are rated for continuous duty
- Filter section has quick-access, washable 1"-thick aluminum mesh filter panel
- All-position mount (shaft horizontal only)
- Max. inlet/ambient air temp.: 140°F

The internal air mover is a quiet, forward-curved, ball bearing, double inlet blower. Access panel allows convenient motor and drive installation and servicing from either side. ½" internal fiberglass insulation helps isolate noise and overcome condensation on cabinet when used in cooling applications. Use indoors with clean-air heating, cooling, and ventilating systems. Up to 25% blower speed and cfm reduction using variable pitch motor sheaves when ordered with motor and drives. Drive package components are packed separately.

No. 3F532 Shown with optional filter rack

Details on page A1.

Single-Inlet Forward Curve Direct-Drive Blowers

Blower With Motor

- Housing can be rotated to 8 discharge positions in each rotation
- Welded steel construction
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Provide high-volume ventilation when duct systems are required. Motor packed separately when ordered with blower.

Note: Review OSHA codes. OSHA complying guards are required where fan blades are exposed and within reach of personnel.

High-Volume—Great for medium pressures; combine characteristics of high-volume and high-pressure blowers. 16-ga. steel housing with welded, airtight joints. Heavy steel wheel. All motors are rigid mounted.

Single-Inlet Forward Curve Belt-Drive Blowers

- Heavy-gauge steel construction
- Continuous duty
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient temp.: 104°F

Adjustable top motor mount moves from top to rear mounting. Easily altered to required discharge position by drilling new motor mounting holes, rotating blower housing on base, and bolting in position. Motor is resilient-mounted and automatic reset thermal-protected.

High volume at low velocity. Shipped in bottom horizontal discharge position. Drive package components packed separately.

Note: Review OSHA codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

Single-Inlet Forward Curve Quiet Design Belt-Drive Blowers

- Sturdy arc-welded housing and frame
- Gray baked-on epoxy finish
- Max. inlet air temperature: 250°F
- Max. ambient temperature: 104°F

Extra-quiet, efficient blowers provide high volume performance. Adjustable to 8 standard positions. Ball bearings. Dynamically balanced, clockwise rotating steel wheel. V-belt drive with weatherproof drive cover included. Drive package components packed separately.

Models with a wheel diameter of 10½", 13½" and 16¼" are available on Grainger.com®.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

Bearing Kit, Self Aligning, Max. HP ¾, Max. RPM 1000, Includes Thrust washer, Locking Collar and Rubber Isolator, Pkg. Qty. 2	Belt Drive Furnace Blowers	5VZU4
Bearing Kit, Self Aligning, Max. HP 1, Max. RPM 1000, Includes Thrust washer, Locking Collar and Rubber Isolator, Pkg. Qty. 2	Belt Drive Furnace Blowers	5VZU5

Backward Incline Belt-Drive Blowers

- Nonoverloading, dynamically balanced wheels
- Sizes 10½" to 24½" feature flat blade wheel; sizes 27" to 36½" have airfoil wheel
- Both wheel styles provide full Class 1 performance range
- Welded steel housing
- Gray baked-on epoxy finish
- Max. inlet air temp.: 250°F
- Max. ambient: 104°F
- Pillow block ball bearings

Motor cannot be overloaded at any given rpm and horsepower regardless of static pressure applied to the system. Clockwise rotation viewed from drive side. Blowers are shipped in bottom horizontal discharge position and can be changed in the field to 7 additional standard discharge positions. Sizes 10½" to 20" have variable-pitch sheaves; larger sizes have fixed sheave drive. Include weatherproof drive cover. Drive packages are packed separately.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

** Performance shown is for installation Type B: free inlet, ducted outlet. Power ratings (BHP) do not include drive losses. Performance ratings do not include the effects of appurtenances (accessories). ** Drive package consists of appropriate motor, belt, and sheaves to obtain the performance listed. ‡ No. 3C716 has no inlet side support and has only 4 mounting holes.*

High-Pressure Radial Blade Belt-Drive Industrial Blowers

Dayton®

- Housing can be rotated to 8 discharge positions in each rotation
- 12¼" blower handles stringy material, grain, sawdust, granular material, and particle-laden air of nonexplosive gases
- 15⅝" to 36½" blowers handle grain, sawdust, granular material, and particle-laden air of nonexplosive gases
- Max. inlet air temp.: 250°F; increases to 450° with optional heat slinger
- Max. ambient: 104°F

Units are built for CW rotation and bottom horizontal discharge, but can easily be converted to CCW rotation by removing and remounting housing opposite of standard. With weatherproof drive covers. Heavy-gauge, continuous arc welded steel construction with gray baked-on epoxy finish. Blowers have 6 mounting points.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

WARNING: Ductwork required to prevent motor overload.

Optional Heat Slinger—Split-type aluminum slinger mounts on blower shaft between housing and bearing. Cools bearing, allowing blower to handle inlet air temps. up to 450°F. When used with heat shield between motor and housing, blower can handle inlet temperatures up to 500°F.

BASE DETAIL
No. 4C129

High-Pressure Radial Blade Belt-Drive Blowers

- 10⁹⁄₁₆" to 13½" dia., self-cleaning, radial blade wheel
- CW or CCW rotation
- Steel housing with gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient: 104°F

Great for industrial applications where clean or light dust loading conditions exist. Blowers come complete with weatherproof drive cover and dynamically balanced, heavy-duty die-cast aluminum wheels. Self-aligning ball bearing pillow blocks. Bottom horizontal discharge, but can be changed to 7 other discharge directions.

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301.

Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

BLOWERS WITH DRIVE PACKAGE

Drive package consists of appropriate motor, belt, and sheaves to obtain performance listed in table, except No. 4C129 cannot be set up for downblast operation. Drive package components are packed separately.

Radial Blade Direct-Drive Blowers

- Housing can be rotated to 8 discharge positions in each rotation
- Welded 16-ga. steel housing and base
- Gray baked-on epoxy finish
- Max. inlet air temp.: 180°F
- Max. ambient: 104°F

Self-cleaning, cast-aluminum wheel can be used to convey stringy or straw-like material and is perfectly balanced and aligned. Units are built for CW rotation and bottom horizontal discharge, but can easily be converted to CCW rotation by removing and remounting housing opposite of standard. Nos. 2C862 to 2C864 have 4 mounting points. Nos. 4C217 and 4C121 have 6 mounting points. Motor packed separately when ordered with blower. For exhaust systems where air contains dirt, lint, dust, and other lightweight foreign material.

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Note: Review OSHA Codes. OSHA complying guards are required where fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

Radial Blade High-Pressure Direct-Drive Blowers

- Housing can be rotated to 8 discharge positions in each rotation
- Max. inlet air temp.: 180°F
- Max. ambient: 104°F

Paddle-type, self-cleaning, die-cast wheels rotate clockwise and are precision balanced for top performance. Bottom horizontal discharge. Great for small-ducted dust exhaust systems and wherever dust collection bags are necessary.

For proper installation, floor-mount vibration isolators (No. 4C875, page 2983) are recommended as follows:

For steel models, order 4 vibration isolators for all except No. 4C330, (order 6 vibration isolators for No. 4C330).

For stainless steel models, order 4 vibration isolators for all except No. 45J503, (order 6 vibration isolators for No. 45J503).

For aluminum models, order 4 vibration isolators for all except No. 45J509, (order 6 vibration isolators for No. 45J509).

WARNING: Not intended for use where flammable or explosive gases, vapors, or dust are present.

Motor overload will result if blower is operated at static pressure below performance shown.

Note: Review OSHA Codes. OSHA complying guards are required when fan blades are exposed and within reach of personnel.

The A weighted sound ratings shown have been calculated per AMCA Standard 301. Values shown for blowers are for (inlet Lwi) sound levels for: Installation Type B: free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

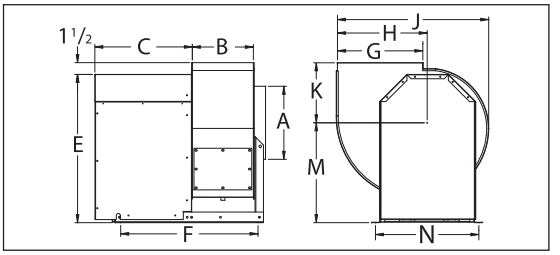
Utility Exhaust Blowers



- For spark-resistant industrial applications
- Aluminum wheel with shaft seal and rub ring

Scroll is clockwise rotation and can be rotated in 45° increments to 8 positions; shipped in upblast position. Units feature bolted access door and gray polyester coating. Weather hood included.

Note: Review OSHA Codes. OSHA complying guards required when fan blades are exposed and within reach of personnel.

WARNING: Use a hazardous location motor where flammable vapors are involved.

Direct-Drive—Nos. 488V85 and 488V87 feature electronically commutated (EC) motors providing up to 70% energy savings. Potentiometer dial on motor allows speed control down to 80%. For internal or external mounting. UL and C-UL Listed.

- UL-705 Listed for power ventilators
- Max. inlet temp.: 180ºF
- For optional EC Control Kits Nos. 43Y140, 35YV92, and 35YV94 see page 2955

Belt-Drive—For commercial kitchen exhaust applications. 1" threaded drain connection point on bottom of blower. Fan motor and drive package components packed separately. UL and C-UL Listed. Blower is only permissible for UL-762 applications when mounted on exterior of the building, scroll must remain in upblast position for proper grease draining.

- UL-762 Listed for Restaurant Exhaust Appliances (YZHW)
- Max. inlet air temp.: 300°F
- Max. ambient: 104°F

Corrosion-Resistant Direct-Drive Utility Blowers

PLASTEC™

- 115/230V are 1-phase, capacitor run
- 230/460V are 3-phase
- Max. inlet air temp.: 140°F
- Max. ambient: 102°
- Totally enclosed fan-cooled motors
- Ball bearings
- Rotation: CCW

Fully-assembled. Seamless housing prevents leakage of corrosive air fumes. Molded impeller hub and hub cap protect motor shaft, extending product life. Color coding simplifies blower identification. Motors are UL Listed and CSA Certified. Polypropylene models are UV treated and resist most chemicals; polypropylene wheel. Stainless steel models have electropolished 316 stainless steel housings and wheels.

Use to exhaust corrosive air fumes in textile, petrochemical, and water/wastewater treatment; metallurgical, pharmaceutical, and food processing; commercial washing services; schools, hospitals, research centers, and laboratories; and marine environments.

*# WARNING: Motor overload will result if blower is operated at static pressures below performance listed. * Hazardous location motors: Class I Group D, Class II Groups F and G Div. 1 and 2.*

Convex

Concave

Double Inlet Direct-Drive Blower Wheels

- Forward curve
- Rotation facing hub
- Hubs include set screws

Wheels produce high air volume with low vibration for diverse air-moving applications. Individually cartoned for greater protection.

Concave or convex back plates allow motor location on either side of the blower housing. For ventilation, air conditioning, heating, and dehumidifying in industrial and commercial applications.

Note: Single inlet concave models available on Grainger.com®.

Portable Blowers/Carpet Dryers

Dayton

- Space-saving stackable design
- 3-conductor power cords

Dry carpets, upholstery, and hard floors. For portable dehumidifiers, see page 3062.

Nos. 5UMP6, 30EK65, and 30EK66— UL and C-UL Listed.
- Thermoplastic blower wheel
- 3 operating positions
- Built-in outlets to connect multiple units (Nos. 5UMP6 & 30EK66)

No. 5UMP5—"Caution" banner on telescoping handle. UL and C-UL Listed.
- Thermoplastic blower wheel
- 2 operating positions

No. 4XLE2—UL and C-UL Listed.
- Steel blower wheel

Industrial/Jobsite Blowers and Carpet Dryers

DRIEAZ

- Stackable compact design
- Hospital-grade cord with lit plug, except No. 425X94

Rugged, compact, and efficient units are ideal for ventilation and for drying floors, structures, and walls. Accessories are available on Grainger.com®.

No. 38MC15—Lightweight air mover dries floors, stairways, and walls. Variable speed control and digital amp readout.
- Daisy chain up to 10 units on 1 circuit

No. 29AH30—Lightweight air mover dries carpets, crawlspaces, hallways, and walls. 5-position versatility and an energy-saving 1.9A draw.
- Built-in GFCI outlet
- Can daisy chain up to 6 units on 1 circuit

No. 5UNZ5—Dry carpets, use to ventilate, or speed structural drying. UL and C-UL Listed.
- Built-in GFCI outlet
- Can daisy chain units

No. 39C367—Quickly dries up to 80 sq. ft. of carpet or hard floors. Compact and lightweight model is ideal for bathrooms, cabinets, or closets. ETL tested to UL/CSA standards.
- 360° airflow

No. 5UNZ4—Use to ventilate confined spaces, create negative air pressure, and remove odors or dust. UL and C-UL Listed.
- High static pressure
- Duct up to 125 ft.

No. 425X94—High-velocity, variable air flow for ventilating and drying ceilings, floors, and walls. Focus airflow with integrated pivot-and-lock stand. ETL tested to UL/CSA standards.
- Up to 2.7A draw
- Can daisy chain up to 4 units on 1 circuit

No. 5UNZ2—Can direct air 12 ft. in all directions to dry up to 500 sq. ft. of carpeting or hard floors in just minutes. ETL tested to UL/CSA standards.
- 360° airflow at 40 mph velocity
- Locking casters

Window and Wall Air Conditioner Selection Guide

Determine Cooling Capacity (BtuH) needs using table at right. The table does not include people or equipment loads. Add 600 BtuH per person. For heavy shade, reduce by 10%. For sunny spaces, increase by 10%. For use in a kitchen, add 4000 BtuH.

CEER (combined energy efficiency ratio): The higher the number, the more efficient the unit.

STANDARD 8-FT. CEILING	
Average Coverage Area	Cooling Capacity Needed
100 to 150 sq. ft.	4000 to 5999 BtuH
150 to 250 sq. ft	6000 to 6999 BtuH
250 to 300 sq. ft.	7000 to 7999 BtuH
300 to 350 sq. ft.	8000 to 8999 BtuH
350 to 400 sq. ft.	9000 to 9999 BtuH
400 to 450 sq. ft.	10,000 to 11,999 BtuH
450 to 550 sq. ft.	12,000 to 13,999 BtuH
550 to 700 sq. ft.	14,000 to 17,999 BtuH
700 to 1000 sq. ft.	18,000 to 20,999 BtuH
1000 to 1200 sq. ft.	21,000 to 22,999 BtuH
1200 to 1400 sq. ft.	23,000 to 23,999 BtuH
1400 to 1500 sq. ft.	24,000 to 29,999 BtuH
1500 to 2000 sq. ft.	30,000 to 33,999 BtuH
2000 to 2500 sq. ft.	34,000 to 35,000 BtuH

FRIEDRICH

Commercial-Grade Window Air Conditioners

- Programmable
- Quiet operation
- 24-hr. timer
- Auto restart
- Left/right reversible power cord
- Control panel lockout (ON-OFF)
- Anti-intrusion protection

Made for commercial-grade applications with components that withstand more demanding environments. Commonly used to cool offices, retail stores, multi-family buildings, barracks, and dorms. Install in a window or through the wall. Units have remote capability and can be managed via Wi-Fi to allow centralized control of settings for one or more units. They're also compatible with Amazon Alexa and Google Home.

Window Mounting Kits—Window kits are included with Cooling-Only models, but are an accessory item for Cooling/Heating models. Window kits are required for window installation.

Carbon Filters—Remove odors and VOCs. Achieve up to a MERV 6 rating when used with standard filter.

FRIGIDAIRE FRIEDRICH

Residential-Grade Window Air Conditioners

- Programmable
- 24-hr. timer

Units are made of residential-grade materials and have a decorative front grille that blends in with home interiors. Typically used to cool rooms in houses and apartments. All have remote capablity.

Friedrich—CCW and CEW models can be installed in a window or through the wall. All units can be managed via Wi-Fi to allow centralized control of settings. Compatible with Amazon Alexa and Google Home. Units have Seacoast Protection to guard against corrosion.

- Quiet operation
- Auto restart
- Left/right reversible power cord
- Washable filter

Frigidaire—FGR and FHW models are Wi-Fi capable.

Hazardous Location Through-the-Wall Air Conditioners

FRIEDRICH

- Hot gas bypass for cooling operation at low ambient temps., down to 45°F (7°C) without freezing

Sealed motor and solid-state relays prevent sparking while cooling potentially hazardous environments. Can be used where flammable gases, vapors, and liquids are handled or used within enclosed containers or systems, but are not normally present in concentrations high enough to be ignitable. Commonly used to cool laboratories, control rooms, and storage areas. These commercial-grade units have an e-coated coil and powder-coated steel cabinet to resist corrosion. Units are hardwired and have a 15A circuit with a time-delay fuse. Meet ANSI/UL 484 Room A/C, SASO 2681, UL Listed for use in Class I, Div. 2, Groups A, B, C and D, ISA 12.12.101, and NFPA 70.

Commercial-Grade Through-the-Wall Air Conditioners

- Programmable
- Auto restart
- Quiet operation
- Control panel lockout (ON-OFF)
- 24-hr. timer
- Anti-intrusion protection

These through-the-wall air conditioners are made for commercial-grade applications with components that withstand more demanding environments. They're commonly used for cooling offices, retail stores, multifamily buildings, barracks, and dorms. Units have remote capability and can be managed via Wi-Fi to allow centralized control of settings for one or more units. They're also compatible with Amazon Alexa and Google Home. New installations require a wall sleeve and fit in Friedrich® and Fedders™ A and B 27" sleeves.

- Auto restart
- Washable filter

Through-the-wall air conditioners that are made of residential-grade materials and have a decorative front grille that blends in with home interiors. They're typically used to cool rooms in houses and apartments. Units include a remote control.

Friedrich—Units can be managed with Wi-Fi and are compatible with Amazon Alexa and Google Home. Units have Seacoast Protection to guard against corrosion. Trim kit is included to give units a finished appearance. Chassis fits 24½" to 27" sleeves.

- Quiet operation

Frigidaire®—Chassis fits most existing wall sleeves. New installations require Wall Sleeve Kit No. 5PP42.

- Programmable

GE—Units are ADA compliant. Wall sleeve is included.

- Programmable

Packaged Terminal Air Conditioners with Electric Heat

- Quiet operation
- 2-motor design
- Power cord included

Contain separate cooling and heating systems for overcoming harsher winter temperatures. Electric heating element provides heat on days when temperatures fall below freezing. Packaged terminal air conditioners (PTACs) typically run more quietly and have a longer service than packaged terminal heat pumps (PTHPs), but use more energy for heating.

FRIEDRICH Amana

Friedrich®—Wall sleeve is required for new construction, sold separately.

Amana®—New installations require an exterior grille and wall sleeve, sold separately.

Packaged Terminal Air Conditioners with Heat Pump

- Quiet operation
- 2-motor design
- Power cord included

These packaged terminal air conditioners (PTACs) have a heat pump for reversible operation to switch between cooling and heating for year-round climate control. Heat pump uses less energy for heating than electrical heat when outdoor temperatures stay above freezing, making them ideal for climates with mild winters. Also called packaged terminal heat pumps (PTHPs), they have an auxiliary electric heater for heating on days when temperatures fall below freezing.

FRIEDRICH Amana

Friedrich®—Wall sleeve is required for new construction, sold separately. Nos. 467X23 and 467X24 include washable MERV 8 filter.

Multizone Ductless Mini-Split Indoor Wall-Mount Air Handlers

FRIEDRICH
FRIGIDAIRE

- 208/230VAC
- Programmable
- Remote control

Fasten to a wall (typically near the ceiling) to blow cooled or heated air into a room or area. Multiple air handlers can be connected to an outdoor condenser of sufficient capacity to form a multizone mini-split system for cooling more than one room.

Friedrich®—New installations require refrigerant line set, sold separately on Grainger.com®.

- Seacoast protection
- WiFi-capable

Multizone Ductless Mini-Split Outdoor Condensers

FRIEDRICH
FRIGIDAIRE

- 208/230VAC

Used as part of a multizone mini-split system along with two or more indoor air handlers. Weather-resistant cabinet houses and protects compressor, condenser coils, and other interior components. Can be roof-mounted or placed on the ground outside a wall.

Friedrich®—New installations require refrigerant line set, sold separately on Grainger.com®.

Dayton TRIPP·LITE

Heavy-Duty Air-Cooled Portable Air Conditioners

- 24-hr. timer

Provide cool, dehumidified air for cooling people, processes, and equipment. Ideal for rack enclosures, network closets, and areas without access to facility HVAC. Condensate is re-evaporated for drip-free operation, so no floor drain is required and no water tank needs to be emptied.

KOLDWAVE

Heavy-Duty Water-Cooled Portable Air Conditioners

- Ambient temp. range: 70° to 113°F
- 2 cooling speeds

Provide high-capacity air conditioning where no window or outside air source is available. Units connect to a water supply and drain. 18" quick-connect hose included; additional hose kits sold separately. Automatic regulating valve shuts off water flow when the compressor is not running. Great for computer rooms, medical equipment rooms, and telecommunication equipment rooms.

Heavy-Duty Portable Air Conditioners

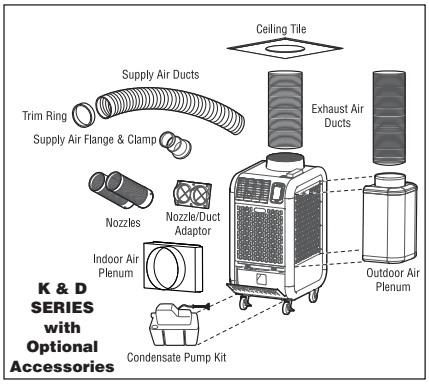
MOVINCOOL
The #1 Spot Cooling Solution

- Air-cooled vented
- Self-contained units are easy to install and operate

Provide cool, dehumidified air for cooling people, processes, and equipment. They're commonly used to cool assembly lines and critical processes.

Climate Pro® K Series— Models are designed for heat-sensitive server rooms, hospitals, laboratories, schools, and stuffy offices. May be used for emergency backup and supplemental cooling applications.

Climate Pro® X and Classic Series— Designed to spot cool warehouses, manufacturing plants, and outdoor events. Also suitable for process cooling and moisture removal.



Climate Pro® D Series (Heat Pump)— Portable heat pumps feature reversible operation to switch between cooling and heating modes for year-round climate control in moderate climates.

Portable Evaporative Coolers

Provide cool, humidified air in areas without combustible vapors, gases, or dust. They require regularly draining and cleaning the water tank and allowing the media to dry thoroughly between uses to prevent odors and clogging from sludge buildup.

Hazardous Location Evaporative Coolers

- 115VAC
- 1 speed

Orange housing color. Sealed switches, cords, motors, and pumps prevent sparking. Rated for Class 1, Division 2 areas where flammable gases, vapors, and liquids are handled or used within enclosed containers or systems, but are not normally present in concentrations high enough to be ignitable. Commonly used in chemical plants, refineries, fuel depots, and garages. They require regularly draining and cleaning the water tank and allowing the media to dry thoroughly between uses to prevent odors and clogging from sludge buildup.

BREEZER MOBILE COOLING

Power Breezer® Portable Misting Coolers

- 1 HP, 1750 rpm
- Variable speed
- Oscillating head
- Integrated water tanks
- OSHA-compliant wire guards

Durable cooling fans can reduce heat-related injuries and improve productivity. Models can reduce temperatures by up to 27°F by circulating atomized water vapor without getting users or equipment wet. Can be used outdoors and in partially covered environments. These wheeled coolers have no evaporative pads to change out, but require regularly draining and cleaning the water tank to prevent odors and clogging from sludge buildup.

Selecting the Right Size Cooler

Evaporative cooling for residential use is typically limited to lower humidity areas and works best when the dew point is less than 50°F. Coolers are up to 75% more economical than refrigerated air conditioning, making them an ideal source of cooling in western and southwestern regions of the U.S.

Coolers can be used across the U.S. to filter intake air in laundries. They are also excellent in makeup air applications in every state, and they are commonly used in agricultural and greenhouse operations.

Note: Square footages are 8-ft. ceiling heights and are approximations only. Assume an 80°F desired room temp. Since cooling requirements can vary, contact your salesperson if additional information is needed

**** Ind. Std. Rating is a numerical rating for comparing similar models and sizing purposes. † Static pressures, vaulted ceiling, heat load, etc., can dramatically reduce the approximate square footage cooled in this chart.***

ESSICK AIR Dayton

Multiple-Inlet Residential Ducted Evaporative Coolers

Distribute cool air throughout a home. Units have multiple inlets to draw in air. Media fits at the inlets to provide a sufficient wet surface area for cooling warm air. Units are typically used to replace multiple-inlet coolers in older installations. No. 453D81 includes a thermostat. Find Residential Ducted Evaporative Cooler Accessories on Grainger.com®.

Multiple-Inlet Commercial Ducted Evaporative Coolers

- 2" pad thickness

Multiple inlets create high cooling capacity for large buildings. Their slim media fits at the inlets to provide a sufficient wet surface area for cooling warm air drawn into the cooler. Units with drive motor package are 1-speed and include motor, pulley, pump, and float. Find Commercial Ducted Evaporative Cooler Accessories on Grainger.com®.

MasterCool Dayton

Single-Inlet Residential Ducted Evaporative Coolers

Hold thicker media than multiple-inlet coolers, which increases contact time with the warm input air for more thorough evaporation. These coolers are used in new installations and as replacements for existing single-inlet coolers. Find Residential Ducted Evaporative Cooler Accessories on Grainger.com®.

ESSICK AIR CHAMPION MasterCool Dayton

Window Evaporative Coolers

- 2" pad thickness

Units pull in warm outdoor air, pass it through wet media to remove heat, and blow out the cooled air. At the end of the cooling season, these coolers can be drained and their media can be dried out for long-term storage. Units require no connection to ductwork, sheet metal cutting, or grille assembly.

Commercial Ice Machines, Bins, and Dispensers

- Gourmet: hard, clear, 8-sided 1⅜" cubes
- Dice: hard, clear, rhomboid ⅞" cube; 48 cubes/lb.
- Half-dice: hard, clear, rhomboid cube, ⅜" x 1⅛" x ⅞"; 96 cubes/lb.
- Nugget: soft, chewable 3/10" x 3/10" x ½" cubes dispense without hand scooping; slow to melt, less drink dilution

No. 458K32

Stainless finish with clear coating provides superior corrosion resistance and resists fingerprints and dirt. Nos. 458J99 to 458K74 are ENERGY STAR qualified. Repair parts are available on Grainger.com®.

Ice Makers, Built-In Undercounter—Compact machines for small-volume ice production.

No. 458J81 is designed for boardrooms, conference rooms, or business lunch areas. Built-in or freestanding capability. Features multifunction control panel with delay, integral filtration, and oversize, lighted bin opening.

Other models are sized for coffee shops, stadium boxes, break areas, or areas with limited floor space or height.

Ice Makers, Modular Heads, High Capacity—Ideal for movie theaters and other high-volume applications. Programmable ice production with continuous diagnostics keep ice stocked and machine operational. 24-hr. maintenance and diagnostic feedback on easy-read, blue display. Food zone is easy to clean.

- On/Off time or ice volume programs
- Fit on top of Ice Storage Bins (sold separately)

Stationary Ice Storage Bins—Convenient stay-open design keeps bin door out of the way. Soft trim around opening helps silence door closing. Internal scoop holder is above ice line for easy access and better sanitation. No. 458K75 requires 1 ice deflector kit, sold separately on Grainger.com®.

Residential/Commercial Ice Machines

MARVEL

Eco Ice™ models can save you up to 25% electricity and water usage compared to other machines. Illuminice™ units project white LED light through the clear ice for a brilliant lighting effect, and feature audible alerts and programmed cleaning reminders. All models require no pump or drain, except Nos. 497A67 and 497A68 can use optional pump No. 19M475.

Scotsman Ice Systems

Find Ice Scoops, Ice Buckets, and Ice Totes on Grainger.com®.

Commercial Ice Machines, Bins, and Dispensers

- **Gourmet cube: hard, clear, 1" x 1⅛" x 1¼"**
- **Small cube: hard, clear, rhomboid, ⅞" x ⅞" x ⅜"**
- **Medium cube: hard, clear, rhomboid, ⅞" x ⅞" x ⅞"**

Stainless finish provides corrosion resistance and allows for easier cleaning. For repair parts, go to Grainger.com®.

Note: ENERGY STAR qualified where noted.

Ice Makers, Built-In Undercounter—Compact units are designed for low volume, built-in applications. Nos. 36N972, 36N973, and 36N959 are designed for small office and board room applications. No. 36N973 includes an integrated condensate pump. The other undercounter models are designed for low volume applications as in coffee shops or larger break rooms.

Ice Makers, Modular Heads, High-Capacity—AutoAlert™ indicator lights for advanced diagnostics. Fits on top of ice storage bins, sold separately.

Ice Dispenser, Ice Maker, Water Dispenser, Countertop, Touchless—Touchfree ice and water dispensing makes these units perfect for healthcare and office applications. Equipment stands available for all models, sold separately on Grainger.com®.

Ice Dispensers, Hotel, Floor-Standing—Simple push-to-dispense design and large sink depth accommodate almost any size ice bucket. Ideal for lodging and healthcare segments. Automatic fill from ice machine, sold separately.

Stationary Ice Storage Bins—Feature integrated scoop holder and removable ice baffle for easy cleaning. Nos. 36N920 and 36N921 are polyethylene construction. Bin adapter kits are sold separately on Grainger.com®.

Commercial Ice Machines, Bins, and Dispensers

- Top Hat: for small business or residential use, ⅞" x 1"
- Cubelet: soft, chewable, ideal for healthcare or food service, ⅝" x ½" x ⅜"
- Crescent: hard, clear, 1⅛" x 1½" x ½"
- Flake: for therapeutic use in hospitals
- Square: for gourmet beverages, 1" x 1" x 1"

Ice machines have a stainless steel finish to resist corrosion and to ease cleaning. ENERGY STAR qualified where noted. Repair parts are available on Grainger.com®.

Ice Makers, Undercounter—Compact units for lower volume ice output. Nos. 31XC32, 31XC33, 31XC85, and 31XC86 are ideal for residential use. Models can be freestanding or built-in, and have a field-reversible door. Compatible with optional Drain Pump No. 31XD01, for use where a floor drain is not accessible. Other models are sized for coffee shops, small businesses or restaurants.

Ice Makers, Modular Heads, High Capacity—No. 31XC76 produces a full square cube with minuscule dimple; cubes melt slowly making them ideal for gourmet beverages. All machine heads are for use with storage bins, sold separately.

Ice Dispenser, Ice Maker, Water Dispenser, Countertop—Feature the CleanCycle 12® system that purges the dispenser of impurities every 12 hr. Reliable resin-based gear motor for long life.

Ice Dispenser—Floor standing units have simple push-button dispensing.

Ice Dispenser, Water Dispenser—Countertop unit has an innovative auger agitator design that dispenses individual cubes, and model can dispense water.

Stationary Ice Storage Bins—Feature H-Guard Plus antimicrobial and a removable baffle to ease cleaning. Nos. 31XC23 and 31XC24 feature a universal top kit.

Ice Machines and Dispensers

Ice-O-Matic

- 115V

No. 36RF31 is a continuous-flow ice maker with non-refrigerated ice storage. No. 36RF27 has a sanitary, touch-free dispenser. Lighted keypad and design allows you to fill large water pitchers. No. 36RF26 allows easy cleaning of the storage bin without moving the machine. Find more Ice-O-Matic® products on Grainger.com®.

Digital/Wireless App Manifolds

YELLOW JACKET®

ManTooth™ gauges provide a wireless connection to your smart device so you can test without losing refrigerant (no hoses or manifolds required). Calculate and display pressure, temp., superheat and sub-cooling on your device. Screenshot feature lets you save and share readings. Rechargeable battery and USB cable included. No. 39DM72 includes a case. No. 48WE24 includes dual non-tethered pressure/temperature gauges, 2 wired temperature clamps, and 1 interchangeable vacuum gauge.

PARKER

Lightweight wireless sensors can sync with a smart device app so you can read and display a system's real-time pressure and temp., plus display superheat and sub-cooling without using hoses or manifold gauges. Case included.

TESTO

All include a large back-lit digital display, sight glass, and batteries. Included case, except for No. 39DM73.

No. 39DM73—Includes 60 refrigerant profiles.

No. 39DM74—Bluetooth®-linked app integration for monitoring, report generation/sending via email. Superheat and sub-cool calculations and 60 refrigerant profiles (more are downloadable). Includes 2 NTC temp. clamps.

No. 39DM75—Bluetooth®-linked app integration for monitoring, report generation/sending via email. Simultaneous superheat and sub-cool calculations and 60 refrigerant profiles (more are downloadable). Includes external vacuum probe and 2 NTC temp. clamps.

No. 21C649—Internal vacuum sensor, data logging and printing capabilities, and a third probe port. Simultaneous superheat and sub-cool calculations and 40 refrigerant profiles (more are downloadable). Includes 2 NTC temp. clamps and USB cable.

No. 45TY46
(Phone not included)

Manifold Gauge Sets and Charger

Yellow Jacket®—Manifolds offer 60" UL high-pressure hose sets. Aluminum 4-valve manifolds feature ⅜" vacuum port and exclusive 100 mesh filter within each flare fitting to keep out particulate material and extend seat life. All manifold bodies have lifetime manufacturer's warranty. Gauges offer 1% full scale accuracy and polycarbonate crystal cover to prevent face damage. 3⅛" gauges have Flutterless™ technology. Gauges are adaptable to other industry manifolds.

JB Industries—Nos. 20HK13 and 36P061 feature full-flow design for faster evacuation and charging. Nos. 14X855 and 14X854 have internal metering ball valves for liquid charging; no liquid charging adapter required. Most have 3⅛" gauges with 3-refrigerant scales; No. 14X858 features 4" gauges with 4-refrigerant scales, Class 1. Nos. 35YX49 and 36P061 have secure seal fittings.

Imperial®—Precision flutter- and pulsation-resistant gauges with protective boots. PolarShield® high-pressure UL Recognized barrier hoses. 2-valve manifolds are brass; 3- and 4-valve manifolds are aluminum. 4-valve manifolds feature ⅜" vacuum port. No. 1YNU9 has integrated liquid low side charger.

Dayton®—All units include 72" hose sets. Nos. 4PDF8, 4PDF7, and 4PDG1 use flutter-resistant dry gauges.

Charging and Evacuation Hoses

- Working pressure: 800 psi
- Burst pressure: 4000 psi

Dayton®—Compatible with HCFC and HFC refrigerants, including R-410A. Meet SAE J2196.

JB Industries Kobra® Kevlar®—Hoses feature secure seal fittings and are for use with R-410A. UL Recognized.

Imperial® Kevlar®-Lined PolarShield®—Can be used with all blends of refrigerants. Adjustable brass core depressor to match valve core. 905 Series hoses have ¼" FFL connections with auto shut-off on 1 end. Nos. 6T370 and 6T371 have permanently attached straight Kwik-Coupler® shut-off connector at 1 end of each hose. R-410A compatible. No. 3T473 is C-UL Recognized only. Other PolarShield hoses meet all EPA requirements, are UL Recognized, and meet UL 1963 and SAE J2196.

Yellow Jacket PLUS II™—Hoses feature double barrier protection and are compatible with all refrigerants, including R410A. Compact ball valves recommended for R410A; SealRight™ fittings feature low loss anti-blow back connection; standard ends offer an "Adjust-a-Valve" depressor. ¼" hoses are UL Recognized (SA9737).

Refrigerant Recovery Machines

UL CERTIFIED
To meet EPA Regulations per ARI 740
8EA7

Bacharach® 2-Port—Powerful twin cylinder 1-HP oilless compressor, high/low pressure shut-off, and easy 1-knob operation. Integrated purge feature minimizes cross-contamination of refrigerants. Include in-line filter and connection hose. No. 31TP42 has 80% shutoff installed.

Dayton® 2-Port—Oilless, air-cooled, direct-drive compressor easily switches between liquid and vapor recovery. Shut off when recovery is done.

Inficon Vortex® Dual 2-Port—1 HP dual piston compressor and micro-channel condenser ensures sustained speed in high-temp. environments.

JB Industries—Powerful dual-piston compressor, simple 2-valve operation, and is self-purging without having to change hoses.

Robinair®—Oilless compressor and lets you recover both vapor and liquid refrigerant. Simple 2-valve controls and auto, high-pressure shut down.

Yellow Jacket YJ-LTE™—Easy-to-use purge circuit for clearing after each job. 1-valve and 1-gauge control panel.

Yellow Jacket RecoverXLT 2-Port—Oilless units offer single-valve control for easy changeover from liquid to vapor to purge. CPR valve regulates refrigerant to compressor; eliminates throttling the suction valve.

Vacuum Pumps

All units are 115V, 60 Hz, and have check valves, a sight glass, and gas ballast valve.

Bacharach®—Compact, 2-stage, rotary vane pumps.

Dayton®—Smaller pump design allows portability. On/Off rocker switch.

JB Industries—2-stage, direct-drive pumps with low-profile On/Off rocker switch. Nos. 1AKD9 and 5UET2 have well-protected drain valves sealed with O-rings to prevent leaks. All are UL Recognized.

Robinair®—Models have 2-stage rotary vane design. No. 52VN81 VacuMaster™ has high CFM rating for fast evacuation. No. 52VN86 features a heavy-duty motor and an Iso-Valve™ that lets you shut off the pump while still connected to the A/C system.

Yellow Jacket SuperEvac™—2-stage pumps pull a vacuum down to 15 microns or better. Feature built-in vacuum gauge, all-metal construction with steel handle, and intake filter screen.

Refrigerant Recovery Cylinders and Liquid Level Sensor

GA GRAINGER APPROVED

Powder-coated, reusable cylinders meet DOT Spec. 4BA and ARI guidelines. Dual-port valve for liquid or vapor. A refrigerant recovery scale or float sensor (sold separately) is required to avoid overfilling. Liquid Level Sensor No. 4LZH4 serves as a float switch.

No. 4LZH2

No. 10M819

Refrigerant Leak Detectors

Detect all halogenated refrigerants, except No. 5ZXH2 only detects CO_2 refrigerant.

Yellow Jacket—No. 10M819 has flashing tip, UV lights, and Smart Alarm LED that shows the size of leak on a scale of 1 to 9.

Johnson Controls—Manual and automatic background adjustment.

Inficon—Automatic background adjustment, audible and visual alarms. Nos. 5ZXH2, 5ZXH1, and 3MMN3 include multiple LEDs and headphone jack.

Bacharach—No. 3MMT2 has high or low sensitivity modes.

JB Industries—Allows you to detect all HFC, HCFC, and blended refrigerants, plus the new HFO refrigerants. No. 35YX37 has a peak function that stores the highest change in refrigerant concentration while continuing to detect leaks.

UEI Test Instruments—No. 52AU29 has a digital numeric leak size indicator with 3 sensitivity levels and a visual LED leak alarm in a splash-resistant housing. No. 52WH43 can detect existing halogenated refrigerants and blends with 2 position sensitivity selector, plus audible and visual leak rate indicators. No. 52ND59 is NIST certified.

Visual LED Leak Alarm, Automatic Calibration and Ambient Level Reset, Splash Resistant, Lightweight, (4) AA Batteries, Case, Filter, Leak Vial	0.05 oz./yr. R-134a, 0.025 oz./yr. R-22	3	RLD15B-N	**52ND59**
Replacements				
Replacement Probe Cap And Filter Kit, For Use With Mfr. No. 717-202-G1			717-701-G1	**5ZXH4**
Replacement Probe Filter, For Use With Mfr. No. 3015-4484			3015-2906	**34K571**
Replacement Filters and O-Ring Kit, For Use With Mfr. No. 0019-8200			0019-0801	**45AW27**
Replacement Tip Filter, (Pkg. Qty. 5), For Use With RLD15			RLDTF	**6CMT6**

No. 35LX63

Ultrasonic Leak Detectors

AccuTrak® technology allows you to easily pinpoint pressure and vacuum leaks in air conditioning and refrigeration systems without changing tips or components. Detect any type of refrigerant or gas, even as small as 1.5 oz. per year of refrigerant, or hear a 5 psi leak up to 30 ft. away. Use the Touch Probe to hear internal ultrasound to quickly diagnose malfunctioning valves and bearings. Troubleshoot a TXV in just 5 min. Use the Sound Generator to artificially "sound pressurize" any enclosure or vessel to find leaks; ideal for refrigerator door seals. No. 3KXG7 can detect pressurized or vacuum leaks for any gas including nitrogen. The laser pointer helps you pinpoint leak location, even for far-away leaks.

Includes	Brand	Mfr. Model	Item No.
Headset, Probe, Carry Case, Wave Guide, Battery	Superior AccuTrak®	VPE	**35LX63**
Sound Generator, Headset, Probe, Carry Case, Wave Guide, Battery	Superior AccuTrak®	VPE PRO-PLUS	**35LX64**

Whisper® Ultrasonic Detector, Probe Extention, Headphones, 2 "D" Size Batteries, Hard Plastic Carrying Case and 2 Year Replacement Warranty	Inficon	711-202-G1	**3KXG7**

No. 4LWX3

No. 20LR04

Data Loggers

Self-contained for temperature, except No. 4LWX3 monitors temperature and humidity. Nos. 20LR03 to 20LR05 have a real-time LCD and user selectable Stop on memory full, or rollover for continuous logging. Display alarm icon for high/low status and retain data if battery fails. All models include cables, software, and battery.

Description	Temp. Range (F)	Relative Humidity Range	Accuracy	Mfr. Model	Item No.
Miniature Data Logger, Temperature and Humidity	-40° to 158°	0 to 99%	±1 °F Temp, ±2% RH	SL300TH	**4LWX3**
Data Logger, Lithium Battery, Temperature	-5° to 160°	—	±0.9 °F (0.5 °C)	SL500T	**20LR03**
Data Logger, Temperature	-5° to 160°	—	±0.9 °F (0.5 °C)	SL500TC	**20LR05**
Data Logger, External Temperature	-5° to 160°	—	±0.9 °F (0.5 °C)	SL500XT	**20LR04**

Leak Detection Kits and Accessories

SPECTROLINE®

FLUKE.

Fluorescent leak detection kits use OEM-approved universal/POE (polyester) solvent-free dyes that reveal leaks as small as ⅛ oz. per yr. or less. Compatible with CFCs, HCFCs, and HFCs with an inspection range up to 25 ft. Use with small and medium air conditioning refrigeration systems, except No. 34GR05 is for medium to large air conditioning and refrigeration systems. All kits treat up to 50 lb. of refrigerant, 4 gal. of lubricant, or 24 tons of cooling, except No. 34GR05 treats up to 400 lb. of refrigerant, 16 gal. of lubricant, or 150 tons of cooling.

No. 34GR04

No. 34GR04—Injector easily overcomes systems pressure and you can add fluorescent dye even if the system is live. The included leak detection flashlight comes with a rechargeable battery and charger.

No. 34GR05—The injector overcomes systems pressure and lets you add fluorescent dye even if the system is operating. The included leak detection flashlight has a rechargeable battery and charger.

No. 34GR02—Kit has an injector that easily overcomes systems pressure and allows you to add fluorescent dye even if system is up and running.

No. 34GR03—Kit allows you to add fluorescent dye and refrigerant in just 1 step.

Description	Includes	Mfr. Model	Item No.

Supco JB YELLOW JACKET INFICON testo fpi UEI TEST INSTRUMENTS ROBINAIR

Vacuum and Superheat/Subcooling Gauges

Supco—No. 1TC70 features a color-coded LED readout and ¼" male flare connections. Includes hanger/stand, quick caps for fittings, and case. Digital models update every ½ sec. and feature ultrafine resolution, auto-off, and a built-in hanger. No. 4FY27 has 4½-digit LCD, thermistor sensor, and reads vacuum in: microns, psi, In Hg, millibars, pascals, Torr, or Millitorr of vacuum. Cleaning port for sensor cleaning and drying. No. 20LR01 is dual port with a backlit LCD. Unit has an audible and visual alarm when preset alarm thresholds are met.

JB Industries—No. 35YX36 measures vacuum and can be remotely monitored via wireless Bluetooth® and/or smartphone with free app. Program unit with a low/high limit alarm and it has data monitoring capabilities. Includes a power adapter and case. No. 5UET3 features programmable alarm, backlight, shutoff, and large LED screen. Factory calibrated. Includes AC adapter and case. No. 3TRC2 provides continuous read on LCD and saves last readout at shutdown. Leakproof design. ¼" swivel flare connection.

Yellow Jacket®—No. 9XHF8 automatically compensates for temp. and can display down to 10 microns in 7 different units. Sensor cord stretches to 24". Auto-Off. Replacement Vacuum Sensor No. 10M817 is sold separately.

Inficon—Pirani sensor for accurate measurements and replaceable filter to protect sensor. Reads from atmosphere to 1 micron. Quick calibration button; ¼" refrigerant flare fitting. Battery life: 45 hr.

Testo—Micron vacuum gauge with wireless Bluetooth® communication to smartphone; 1 micron resolution; display data, create reports, and send via email or SMS.

Test Products International—Temperature compensated, 300 psi overpressure digital vacuum pressure gauge detects leaks created by vacuum, 7 units of measure.

UEI Test Instruments—Provides in-field calibration, analog bar graphs, easy sensor cleaning, and oil contamination sensors.

Portable Scale Removal Systems

GOODWAY SPEEDCLEAN

Systems clean heat exchangers and other closed-loop systems to improve efficiency and extend the life of your equipment. Designed with acid-proof components, units safely contain chemicals to minimize fumes, splashes, and risk to operator safety. Hands-free models monitor pH levels and inject additional chemicals as needed.

Zerol® Alkylbenzene Refrigeration Oil— Excellent miscibility and compatibility with all CFC and HCFC refrigerants. OEM recommended for HCFC-based service blends. Great for retrofitting with R401b, R402b, and R123. No. 22NV51 is Copeland approved.

A/C Re-New Lubricant Additive—Quiets noisy compressors, improves heat transfer, and reduces energy consumption.

Mineral Oil—Naphthenic oils are OEM recommended for use with CFCs and HCFCs, and approved by Copeland and Carlyle.

Refrigeration Fittings and Repair Supplies

GA GRAINGER APPROVED

JB Industries—Access valves feature brass bodies and stainless steel/brass cores, and are machined according to ARI specifications. Tees are fully adjustable with extra-depth slip-fit braze cups; install anywhere along the line.

Liquid and Suction Line Filter Dryers

For use with all CFC, HCFC, and HFC refrigerants.

Copper—High moisture/acid capacity, solid core, and large flow capacity. No. 6X525 has grooved ends for easy breakoff to activate dryer. Compatible with mineral oils and polyol ester oils (POEs).

Steel—Powder-coated shell withstands 500-hr. salt spray test. SAE flare fittings are nickel plated. Solder connections are 100% copper.

Johnson Controls · RANCO · Supco · GRAINGER APPROVED

Refrigerant Pressure Controls

- SPST, except where noted

DUAL-PRESSURE CONTROLS

Combine high-pressure compressor protection with low-pressure, cycling, or safety functions.

For R-12, R-22, R-134A, and R-502.

Johnson Controls—Visible pressure scale. Adjustable through the range without removing cover. Manual reset models are trip-free. P170 models require armored capillary tubes; see Grainger.com®.

SINGLE-PRESSURE CONTROLS

For R-12, R-22, R-134A, and R-502. Nos. 40G337, 40G338, 40G344, 40G388, 40G389, 40G399, and 40G404 are compatible with R-410A.

Low Pressure—Protect compressors against loss of refrigerant. Also used to cycle compressors in commercial refrigeration applications.

High Pressure—Protect compressors from excessive system pressure.

NONADJUSTABLE PRESSURE SWITCHES

- Automatic reset, except where noted
- Bursting pressure: 5000 psi

Snap-acting sensor. ¼" female SAE connection. 24/120/240V. Nos. 40G327, 40G323, 2HYV5, 2HYV6, and 2HYV7 are compatible with R-410A.

Johnson Controls

Water-Regulating Valves

- Max. water pressure: 150 psig (V146 models are 350 psig)
- Corrosion-resistant material

Direct-acting valves open on pressure increase to regulate the flow of water or glycol to water-cooled condenser refrigeration systems. Pressure-balanced, modulating valves provide precise control of head pressure on open or closed refrigeration systems. Valves can be repaired without removal or system pump-down. V47 models are temperature-activated.

Valves for High-Pressure Refrigerants—Are for use with R-410A refrigerant and require Armored Capillary Tube No. 40G423, sold separately this page.

Johnson Controls

Armored Capillaries

- For use with ¼" male flare fitting connectors

Armored capillaries minimize pressure pulsation. Brass armor sleeve improves resistance to abrasion caused by vibration. UL and C-UL Recognized.

Note: Compatible with all common noncorrosive refrigerants.

Johnson Controls

Electronic Pressure Transducers

Rugged, compact, direct-mount pressure transducers produce an analog signal based on the sensed pressure and are ideal for use in air conditioning and commercial refrigeration applications.

Johnson Controls RANCO

Oil Pressure Controls

- 120/240VAC
- Manual reset
- Built-in time delay relay

JOHNSON CONTROLS

For use with noncorrosive refrigerants.

P45 and P145 Series—Units are nonadjustable and provide dependable low-lube oil pressure; factory set per manufacturer's specs. P145 models require armored capillary tubes (see page 3017).

P28 and P128 Series—Provide dependable cut-out for pressure-lubricated refrigeration compressors. Field-adjustable pressure differential per manufacturer's specs. P128 models require armored capillary tubes (see page 3017).

P545 Series—Electronic controls lock out compressor if lube oil pressure falls below manufacturer's recommended net pressure. For use on refrigeration compressors equipped with oil pumps that accept single-point differential pressure switch. P400 sensor and wire harness included with controller.

RANCO

Replaceable time-delay modules, and adjustable pressure range.

For R-22, R-124, R-134A, R-408, R-502, and R-507.

Defrost Controls

PARAGON

Timers for Water Spray with Pump-Down Drain or Fan Delay Cycles—Defrost initiation: 1 to 8 cycles per day, at least 3 hr. between cycles. Delay or pump-down cycles: 0 to 30 min. in 3-min. increments; for stopping fans, reducing refrigerant pressure, or hot gas pump-down cycle. Defrost or fan cycles: 3 to 45 min. in 3-min. increments.

Time-Initiated and Time-Terminated—For electric heat, hot gas, or compressor shutdown defrost. Defrost/initiation cycles: 1 to 6 per day. Defrost cycles: 4 to 110 min. in 2-min. increments.

Time-Initiated, Remote-Temperature, or Pressure-Terminated—Work with external temperature or pressure sensor. Has 3 contact arrangements for electric heat, compressor shutdown, or hot gas defrost. Defrost cycles: 1 to 6 per day. Dial overlay changes defrost time from even- to odd-numbered hours. Backup defrost termination: 4 to 110 min. in 2-min. increments.

Time-Initiated, Pressure-Terminated—Modular pressure bellows. 3 contact arrangements for hot gas, electric heat, or compressor shutdown defrost.

No. 5X450

Defrost cycles: 1 to 6 per day, at least 4 hr. between cycles. Dial overlay changes defrost time from even- to odd-numbered hours. Backup defrost termination: 4 to 110 min. in 2-min. increments. Adjustable cut-in pressure-setting dial calibrated from 36 to 100 lb.

Time Initiated, and Time-, Pressure- and Temp.-Terminated, Auto Voltage—For commercial freezers and refrigerators. Defrost initiation in 15 min. cycles, up to 48 cycles per day. Compressor contacts 3HP, heater/fan contacts 2HP.

Universal Defrost Timers—Manual defrost can be initiated in 15-min. intervals. Provides 100 hr. of power loss protection.

PRO White-Rodgers EMERSON Johnson Controls
Honeywell Home Braeburn ICM CONTROLS BOSCH LUX Invented for life

Wi-Fi-Capable Thermostats

Allow you to access and adjust your heating and cooling system via PC, smartphone, or tablet PC.

Pro1®—No. 45KE76 has advanced features, multiple stages, and commercial settings. No. 45KE77 is ideal for residential use.

White-Rodgers™—Sensi™ touch thermostat has a geofencing feature that automatically changes temperatures based on the location of your smartphone. Smart alert capability notifies you of extreme temperature or humidity levels.

Emerson—Sensi™ Series lets you control multiple thermostats from multiple smart devices. Includes smart technology and is compatible with Amazon, Apple®, and Wink smart home platforms.

Johnson Controls—Feature high-resolution color touch screen and can control a wide range of heating/cooling equipment via an available mobile app.

Honeywell Home—Lyric™ thermostats Nos. 54DM21 and 54DM22 can be controlled by multiple smartphones at one time and are compatible with many home automation apps. Can be configured as non-programmable, programmable, or geofencing.

Braeburn®—Features SpeedBar® multi-function button to help speed programming and design allows for the addition of Bluelink wireless indoor, outdoor, or humidity sensors for enhanced system control.

ICM—i3 Series feature an intuitive interface to ease programming and touch icons located off the display for a larger viewing area. Nos. 32MY39 to 32MY41 provide humidification control.

Bosch—Easy-to-install unit offers you all-in-one control through the BCC100 App. Design allows you to connect to an unlimited number of thermostats and manage up to 4 schedules per thermostat.

LUX GEO™—Features Home and Away Aware™ geofencing and universal compatibility ("C" not required). Works with Alexa-enabled devices and mounts horizontally or vertically.

Johnson Controls

Glas® Smart Thermostat

Voice-enabled Wi-Fi thermostat monitors humidity, equivalent carbon dioxide (eCO_2) level, and total volatile organic compounds (tVOC) indoors and can report the outdoor air quality and pollen levels. Includes features such as fan runtime options, smart ventilation, and smart circulation that allow you to have more control over your indoor air quality.

Universal Thermostat Guards

Mount horizontally or vertically. Designed to protect virtually any thermostat. Models with clear cover have off-white base and ring. For other models, base and ring match cover color.

Plastic—Probe-resistant models have double-wall design to prevent tampering.

Stainless Steel—Long life and durable performance in humid and corrosive environments.

Line Voltage Thermostats

Nos. 2NNT1, 2NNR9, and 2NNT2—430 stainless steel housing; suitable for use in high humidity and corrosive environments. No. 2NNT1 controls up to 2 devices, with 1 stage operating 3°F higher than the other.

Nos. 1UHH1 to 1UHH4 and 4E636—Use stainless steel sensing elements for corrosive conditions. No. 4E636 has NEMA 4X enclosure; suitable for agricultural, wet, or mildly corrosive conditions with airborne contaminants.

No. 2E517—Includes removable locking cover.

No. 4NE56—Features 44°F frost protection setting.

No. 2E734—Features 2 dial stops for locking dial setting.

No. 6WY24—Features 7-day programming and backlit LCD. 3 presets: normal, economy, and extended absence.

No. 6WY23—Shows actual temperature on large LCD. Backlight button and On/Off switch.

No. 2NKW5—Triac control maintains setpoint temp. within ±1°F.

No. 4PU48—Features positive Off position.

No. 2E831—Includes thermometer and locking cover.

No. 2E477—Locking case prevents tampering.

Remote Bulb Thermostats

Nos. 2NNT3 and 2NNT4—Have stainless steel housing and capillary components for corrosive environments.

No. 2KGR3—Has gas-filled bulb and electro-plated copper capillary tube. For large coils where air stratification could cause localized freezing.

No. 4MY93—Has corrosion-resistant stainless capillary and sensor for agricultural applications.

Nos. 4E912 and 4E919—Used with room air conditioners, packaged terminal air conditioners, and heat pumps.

Nos. 1RC43 and 2E399—Temperature dial is graduated in both °F and °C. No. 2E399 has bimetallic sensor.

Johnson Controls EMERSON Honeywell RANCO

Electronic Controls

No. 35LY79

No. 278Y45

No. 44R204

No. 3ZP81

- Digital display

Johnson Controls—All controls are UL and C-UL Listed.

A421 Series controls are single-stage, electronic temperature controls with SPDT output relay. The controls feature an adjustable backlit LCD for viewing the temperature and status of other functions, and a three-button touchpad for setup and adjustment. No. 35LY81 comes with factory-equipped power cord. Nos. 35LY80 and 35LY86 include Off-Cycle Defrost control with adjustable defrost cycle duration and frequency. Nos. 35LY79 and 35LY85 are freecooling, duty-cycle ventilation controls.

P470 Series are single-stage and feature lockable touchpad, LCD, and front-panel LED output status. Field selectable ranges include 0 to 100 psi, 0 to 500 psi, or 50 to 750 psi.

System 350™ modular units provide On/Off and proportional temperature, humidity, and pressure control, and temperature reset.

System 450™ digital modular units monitor and control temperature, humidity, and pressure simultaneously. Field-configurable out-of-the-box with Ethernet, Modbus, or Standalone communications options.

Honeywell—Vertically or horizontally mount the IP65 housing. Temperature Control No. 2GZN7 includes Remote Sensor No. 2GZP4. All controls are UL and C-UL Listed, CE Certified.

- **Throttling range: 1° to 150°F**
- **Thermistor sensor: 1097 ohms PTC at 77°F, ¼" dia. x 2"L**
- **NEMA enclosures have 9" leads**

Ranco—Displays error codes. Keypad lockout, settings memory, and time delay on power up. All controls are UL Listed and CSA Certified.

- **Thermistor sensor: ¼" dia. x 4"L**
- **0 to 10V output on Nos. 3ZP78, 3ZP80, 3ZP83, and 3ZP85**

KMC CONTROLS SIEMENS Johnson Controls

Building Automation Controllers and Sensors

KMC FlexStat™ BACnet Controllers— Built-in program library can be customized with site-specific and application-specific requirements. Connect to any system using the ASHRAE BACnet communication protocol. UL Listed.

- 64 x 128 dot matrix LCD
- 24VAC
- Wire clamp 14-22 AWG connection
- Wall mount

KMC Temperature Sensors—Type 2 and type 3 10k ohm resistors.

Siemens—Installed sensors provide accurate environmental measurements to Siemens and other HVAC control systems.

Johnson Controls—Temperature sensors provide economical solutions for a wide variety of temperature sensing needs. The Humidity All-Polymer™ sensor construction provides improved resistance to chemical corrosion. Innovative TrueRH™ circuitry and calibration process for True±2 or 3% humidity sensing accuracy and reliability. Carbon dioxide sensors include an innovative CARBOCAP® sensor, with its single-beam, dual-wavelength design, for superior performance compared to other technologies.

No. 36P601

No. 4MY97

No. 3RCK7

White-Rodgers · Dayton · Johnson Controls · PECO An Astronics Company · Honeywell

Electric Fan Coil Controls

Nos. 3RCK7, 3RCK8, 3RCK9, and 278Y50 feature high/low-temp. limits and energy-saving mode with selectable heating or cooling setback points.

No. 278Y50 is prewired for easy installation.

Nos. 2NCA6 and 2NCA7 provide partial or full keypad lockout.

Nos. 2NCA6 and 2NCA7 are UL Listed; No. 1UHE3 is ETL Listed; No. 1N172 is UL Listed and CSA Certified; Nos. 4MY96 and 4MY97 are UL and C-UL Listed.

Duct Smoke or Carbon Monoxide Detectors

AIR PRODUCTS AND CONTROLS — You in Control

- Detectors are 24VDC, 24VAC, 120VAC & 230VAC

Smoke Detectors—Suitable for high temperature applications and feature an internal dust filtering system that requires no additional screens or filters to clean. Models are universal voltage and you can interconnect up to 30 units. Nos. 45JU28 and 45JU29 have an innovative, toolless design that allows for quick installation and eases the loading and unloading of sampling/exhaust tubes. Nos. 45JU39 and 45JU40 are designed for no- or low-flow special applications and plenum spaces. Nos. 45JU41 and 45JU42 are weathertight, corrosion resistant, and feature a NEMA 4X rating.

Carbon Monoxide Detector—Unit can initiate an air handling unit shutdown when the CO concentration reaches a level considered hazardous by NFPA and OSHA standards.

Accessories—No. 45JU30 features lightweight, sectional tubes that you can connect together for the required length. Nos. 45JU57 and 45JU35 feature a multicolor LED to indicate Alarm, Pilot, and Trouble status. No. 45JU57 is mounted in a white, single-gang cover plate. No. 45JU35 is mounted in a white, double-gang plate with a sounder strobe assembly with a clear lens.

Duct Smoke Detectors

SYSTEM SENSOR

- Detectors are 24VDC and 120VAC, except Nos. 2GWK9 and 5CGZ1 are also 24VAC

Feature 4-wire photoelectric integrated low air flow technology and versatile square or rectangular mounting. No. 415F91 has an integrated smoke test port and the sampling tube is durable corrosion-resistant steel. Innovative tube allows easy, toolless installation from the front or back of the detector. No. 415F91 is UL Listed.

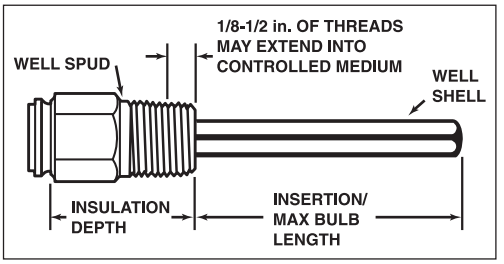
Hydronic Controls



For use in gas- or oil-fired hydronic heating systems that require a 24VAC thermostat. Select models are compatible with 750mV thermostats.

High or Low Limit/SPST—Break the circuit on temp. rise. When used as a controller or a low limit, a separate high limit must be used.

Bypass Timer

- Universal input voltage: 18-240VAC, 1A, 10A inrush

Bypasses a low-pressure switch or an oil-pressure switch on startup.

Time Delay	Mfr. Model	Item No.
10-1000 Seconds	ICM175	3UW85

3-Phase Line Voltage Monitors

Can detect voltage imbalance, high/low voltage, phase loss, reversal, incorrect sequencing, and rapid short cycling. UL Recognized (E60605).

No. 3UW93—Programmable 25-fault memory storage. Independent high/low voltage settings.

No. 3UW93

** Physical dimensions vary by manufacturer.*

Universal Capacitors

¼" brass-plated dual male terminals for best reliability, conductivity and corrosion resistance. Includes jumper wires to combine individual values into desired MFD rating. 60/50 Hz. UL Recognized (E133000).

No. 2ELT2

Description	MFD Rating	Cap. Voltage	Dia.	Case Height	Mfr. Model	Item No.
Motor Run Capacitor	2.5-67.5	370-440VAC	2½"	4½"	Turbo 200	2ELT2

Surge Protectors/Arrestors

- 1-phase, 120-240V

Protect air conditioners, generators, motors, and appliances from power surges and lightning. No. 32ZN47 has an LED showing that surge protection is present, and a second LED indicating that device has power and is properly grounded.

No. 32MY23

Max. Surge Current Per Phase	L	W	D	Brand	Mfr. Model	Item No.
100kA	4.50"	2.75"	2.25"	ICM	ICM517	32MY23

Refrigeration and Air Conditioner Start Assist Kits

Nos. 32ZN44 to 32ZN46 can reduce air conditioner compressor start-up time up to 50% and lower energy consumption. Nos. 4E239 to 4E241 are for residential and commercial air conditioning units, heat pumps, and room air conditioners. No. 4MG78 replaces 3-wire potential relay and capacitor. No. 4E238 is used with residential and commercial refrigerators and freezers. Nos. 20LP97 to 20LP99 allow OEM-style, 3-wire installation and are for single-phase air conditioner or refrigeration units and hard-starting compressors under low voltage conditions.

No. 4E238

Robertshaw® ICM CONTROLS™ White-Rodgers™ Honeywell Home

Universal System Controls

- ¼" quick-connect
- Gas type: LP/NG

No. 3XA74 is universal for comparative silicon carbide modules. Features interchangeable program keys. No. 1RZZ2 is for single- and dual-rod remote sense applications.

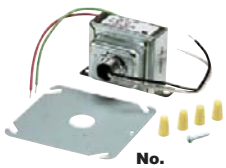
Note: For more information on included components and features, go to Grainger.com®.

No. 48KT46

Robertshaw® Honeywell

Intermittent Pilot Ignition Systems and Conversion Kits

Convert conventional standing pilot systems to intermittent pilot systems. No. 4E397 has 60-sec. max. lockout time, and shutoff is 100% after 3 trials for ignition. No. 4E396 has no max. lockout time with continuous trial for ignition and is not 100% shutoff. No. 1TGE4 is 100% shutoff with 90-sec. max. ignition trial; continuous retry.



Note: For kit contents, go to Grainger.com®.

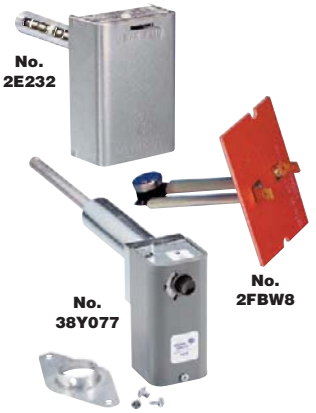
Electric Water Heater Thermostats and Limit Control

UL and C-UL Recognized.

Thermostats—Terminal 1 is common. No. 6XZV2 closes circuits 1 and 4 and opens circuits 1 and 2 on temperature rise.



Limit Control/Thermostats—Factory assembled.

Limit Control—Manual reset.

Honeywell Home | White-Rodgers | Supco | Johnson Controls

Plenum-Mount Fan and Limit Controls

All except flush-mount models have insertion-type elements.

FAN AND LIMIT

Single-element fan and limit combination fits applications with narrow space limitations.

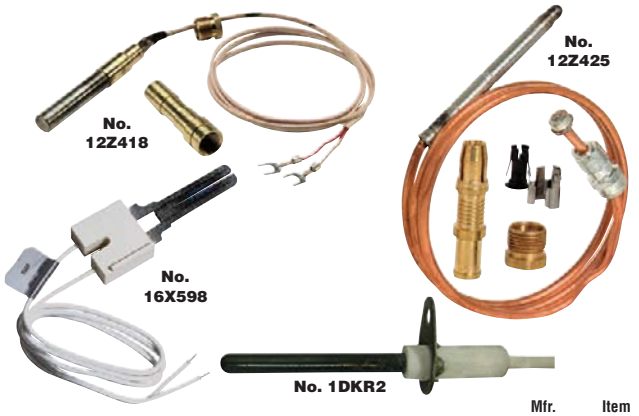
Honeywell—UL Listed.

White Rodgers—UL Recognized and CSA Certified.

LIMIT

- Pilot-duty rated
- Resistive amps: 15 at 120V, 10 at 240V
- Voltage: 120/240/480

UL Listed and CSA Certified.



WARM AIR

- Max. element temp.: 300°F
- Pilot duty: 125VA at 24 to 600VAC

Features adjustable dial stop and trip-free reset lever. UL Listed.

Pilot and Ignition Components

Items are LP/NG except where noted.

No. 5AU59 is ¼"-dia. aluminum tubing; includes compression nut, ball sleeves, and breakaway ferrule.

No. 12Z418 includes PG9 pilot adapter.

No. 2E446 has 36" armored cable leads with split-spade terminals. Includes mounting nut, spring clips, and PG9 adapter sleeve.

Nos. 2EWF9 and 2EWF8 have low-mass, quick-dropout thermocouples.

GA GRAINGER APPROVED Supco ICM CONTROLS

Potential Relays

Use to start 1-phase, capacitor-type motors in air conditioning and refrigeration applications.

No. 4MG77

Supco—Replaces most potential relays with 130 to 270V pickup. Contacts will open after 1 to 1.5 sec. if the motor does not start.

ICM—Differential voltage-sensing, universal motor-starting relay. Rated 50 amps @ 110 to 270V, 50/60 Hz. No user adjustments or sizing required.

White-Rodgers

GA GRAINGER APPROVED Dayton

Honeywell Honeywell Home

Magnetic and Transformer Combination Relays

No. 18F255

Snap-acting for remote control of air conditioning, heating, and ventilation systems, motors (up to 1½ HP), tools, and other electrical devices within ratings.

MAGNETIC

SureSwitch™ Relay—Microprocessor-controlled switching algorithms reduce arcing, virtually eliminating contact pitting and welding.

AC Switching—SPST models have combination screw/push-on terminals and permanent jumper to load (except where noted). DPST models have screw-type line and load terminals.

Enclosed Fan (Heavy Duty)—¼" spade terminals.

Conduit Connector—Wire leads.

TRANSFORMER COMBINATIONS

120V primary, except No. 2E346 is 240V and features conduit hub or screw mounting.

Oil Primary Controls, Ignition Transformers, and Electronic Ignitors

OIL PRIMARY CONTROLS

- 120VAC, 60 Hz
- Order flame sensor/detector separately

Controls shut down burner on loss of flame or system malfunction.

No. 3AAD7—Features limited recycle and reset, valve-on delay, welded relay protection, 3 status lights, and 24VAC terminals. Use with GeniSys™ Display No. 3AAD8 as a universal programming/diagnostic controller.

No. 6HMJ3—Universally compatible controller has field-adjustable valve-on delay and 2-line diagnostic LCD. EnviraCom™ communication-ready. UL and C-UL Recognized Component.

No. 2E865—Combination primary and hydronic control with solid state control circuit and external low-voltage terminals. It has circulator control and includes well adapter and heat-conductive compound. UL Recognized, CSA Certified.

IGNITION TRANSFORMERS

- Gas units are 120VAC, 6kV secondary, 50/60 Hz, 20/25mA, 1 end grounded
- Oil units are 120V primary, 10kV secondary, 60Hz, 23mA, MPG

UL Listed.

Beckett—Feature peak voltage up to twice that of larger, heavier iron-core transformers. UL and C-UL Recognized.

- 120V primary, 20kV peak secondary, 15 to 30 kHz

OIL BURNER IGNITORS

Allanson—UL Recognized. No. 23M547 universal replacement ignitor mounts onto any previously installed ignitor mounting plates; eliminates the need for extra mounting plates.

- 120V primary, 17.5kV peak secondary, 50/60Hz, 45mA

High-Efficiency Oil Burners

Beckett

- 120V
- 15-sec. prepurge
- Use with No. 1 or No. 2 heating oil (ASTM D396) only
- Nozzles not included

Feature 1/7-HP PSC motor with automatic reset overload protection, 3450 rpm, and adjustable mounting flange. Each includes low-fire baffle, assorted heads, static plates, integrated solenoid valve, electronic oil ignitor, and single-stage pump. For air tube combinations, nozzles, and accessories, go to Grainger.com® and search for Beckett. UL and C-UL Listed.

No. 4NY13

Oil Burner Pumps

SUNTEC industries incorporated Beckett

- 120V
- 1- or 2-pipe systems

Nos. 4NY15 and 4NY13—Can lift oil up to 8 ft. in 1-pipe system, up to 14 ft. in 2-pipe system.

No. 4NY16—Includes integrated solenoid valve.

No. 6TFC9—Can lift oil up to 18 ft. in 2-pipe system.

Water and Steam System Air Vents

Honeywell Home
Bell & Gossett a xylem brand
Taco Comfort Solutions®

- Max. temp.: 240°F (except where noted)

Honeywell Home—PV Series feature no-clog vent top; eliminates leaking. 360° adjustable collar ring. Thermoplastic float with debris baffle.

EA Series have vent cap with leakage guard. Float/valve assembly is removable for servicing. Built-in vacuum breaker and shut-off valve.

Bell & Gossett—Nonadjustable, except No. 4NU93 has 6 port settings. Nos. 4NU93 and 4NU94 have horizontal pipe fittings; Nos. 4NU95 and 4NU96 have vertical pipe fittings.

Taco—Remove unwanted air from closed loop heating and cooling systems.

High-Capacity Thermostatic Radiator Actuators and Valves

GA GRAINGER APPROVED

Honeywell Home
Honeywell

Provide precise, automatic control of room temperature in 2-pipe systems.

Actuators—Continually monitor and adjust room temperature.

Valves—Threaded tailpiece. Parts are replaceable on in-service, in-line valves under pressure.

Programmable Radiator Controller—Energy-saving unit fits most standard radiator valves.

Steam Traps

Control steam and condensate movement to maximize removal of latent heat from steam for efficient system operation. Stainless steel internal components.

Float and Thermostatic—Traps meet Mil. Spec. WW-T-696-E Type VI, Class 1-5, except No. 402W71.

Inverted Bucket—Inlet and outlet pipe connections are on the same level. Removable covers have valve linkage and seat attached. Meet Mil. Spec. WW-T-696-E Type I, Style B, Class 1-7, except items with Mfr. Model number having a B0 prefix and No. 402W85.

Thermodynamic—Compact traps handle water hammer and superheat; install easily in any position. Audible discharge makes checking operation simple. For use in kettles, steam main drips, and steam tracing.

Thermostatic—Balanced-pressure stainless steel thermostatic element automatically adjusts to varying pressures. Meet Mil. Spec. A-A-60001 Type V, Style A, Class 1 and 2, except No. 402W98.

Universal Electronic Water Level Controllers

Waterline Controls®

Provide precise control that compensates for wave action and manages water levels to within ⅛" of operating range. Sensor rods will not plate foul or deteriorate, no matter the water quality. Digital circuitry easily integrates with existing building automation systems. Modular, quick-connect design. Control panel has water level and fault indicators and diagnostic self-test button. 15-yr. duty cycle. NEMA 4X enclosure. For cooling towers, water and stormwater holding and storage tanks, irrigation lakes, and sewage water systems. 8¾"H x 10½"W x 6"D. Each includes 20"L x 3" dia. PVC pipe containing ¼" stainless steel probes, 50-ft. sensor wire, mounting bracket, and U-bolts. ETL Listed.

No. 2NXP9

** 180°F boiler water inlet, 130°F outlet, 50°F domestic water inlet, 140°F outlet. ** ISO VG_46 oil cooled to 125°F using a 2:1 oil-to-water flow rate and 85°F water. † Cool 2.4 gpm per ton of water from 54° to 44°F using R22 at 35° and 8°F superheat.*

Pneumatic-to-Direct Digital Control (DDC) Room Thermostats

No. 46AE80

Provide reliable zone comfort and enhanced energy economy via remote monitoring and temperature setpoint management. Ideal for energy-saving DDC building upgrades; designed for non-invasive replacement of existing pneumatic units. Various models feature remote wireless setpoint control and occupancy scheduling, and continuous room temperature, branch line pressure, and battery status monitoring.

Johnson Controls

Description	Mfr. Model	Item No.
Wireless 2-Pipe, DA/RA, °F	WT-4002-MFR	**46AE80**

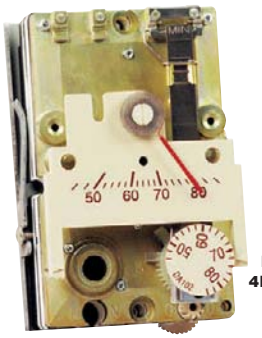
Pneumatic Transmitters and Thermostats



SIEMENS Honeywell Johnson Controls

No. 279A25

No. 38Y185

No. 4E666

Temperature Transmitters—Devices monitor temperature in a variety of applications, particularly those requiring indication with a receiver-controller.

Thermostats—Designed to control pneumatic valves and damper actuators in heating and cooling applications. Cover not included unless specified.

Honeywell Johnson Controls
SIEMENS

Pneumatic Switches, Transducers, Relays, and Valves

Pneumatic Switches—Feature electric pneumatic relays rated at 120V.

Pressure Control—Low pressure control is designed for applications in which a pneumatic air signal is used to operate an electric or electronic device. Applications include pressure-electric switches in pneumatic systems, control of pumps or small air compressors, and pressure-electric interlock of fluid flow systems.

Relays—Perform various functions in a control loop.

Solenoid Air Valves—Commonly used to alternately apply pressure to and exhaust pressure from pneumatically controlled devices.

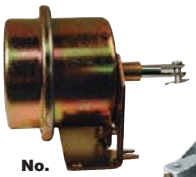
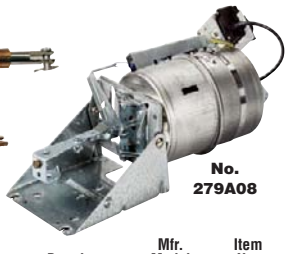
KMC CONTROLS Johnson Controls
Honeywell SIEMENS

Pneumatic Damper Actuators



Proportional control of dampers in either independent or sequence operation.



KMC models are for use on VAV terminals, small dampers, and valves. ³⁄₁₆" fitting for ¼" tubing, ½" mounting hole diameter. Operating temperature limit: -20° to 180°F.

Honeywell Nos. 3UC22 to 3UC24 have no bracket or ball joint, and are for direct replacement.

Siemens/Powers™ Controls - most models have pivot mounting.

Johnson Controls models respond to a pneumatic controller or electro-pneumatic transducer.

No. 4DED1

Pneumatic Receiver-Controllers and Modular Controllers

Johnson Controls—No. 38Y191 directly controls dampers, valves, and other devices in a pneumatic transmission system from a remote transmitter. No. 20RG02 is a pressure independent submaster device for regulating air flow in VAV boxes. No. 20RG03 controls the output volume in response to a reset signal from a thermostat or other master controller.

KMC—For use with pressure switches, receiver gauges, relays, and temperature transmitters to control valves and actuators, including low-limit applications.

Siemens—Use to control temperature, humidity, and pressure of mechanical equipment in commercial buildings. Feature internal restrictors for transmitter inputs and plug-in air connectors. Setpoint can be reset.

Honeywell—Use with remote sensors to provide proportional (P) or proportional plus integral (P+I) control of temperature, humidity, pressure, or dew point.

Variable Air Volume (VAV) Controller Submasters and Sensors

KMC CONTROLS

SUBMASTERS

- Main air pressure: 15 to 30 psig
- Output sensitivity: 5 psi/0.02" WC
- Setpoint range min.: 0" WC
- Adjustable min./max. velocity limits
- Push-on fittings for ¼" O.D. tubing
- Mounting bracket included

CSC-2000 Series—Designed for use on VAV terminal units in HVAC systems. No. 4DDZ2 has a 0 to 10 molded plastic reference dial.

CSC-3000 Series—Universal replacement for more than 85% of OEM-supplied direct- and reverse-acting pneumatic VAV volume-reset controllers shipped since 1980. Reset start point factory set at 8 psig for Nos. 4DDZ8 and 4DDZ9; 3 psig for No. 4DEA1; and 10 psig for No. 4DEA2.

DIFFERENTIAL PRESSURE FLOW SENSORS

- ½" exterior length
- ¼" push-on nipple

For use with VAV controllers and ⅜" O.D. polyethylene tubing. Easily installed through ⅞" dia. hole in duct.

SIEMENS

2- and 3-Way Globe Valves

Used for hot or chilled water on convectors, fan coil units, unit conditioners, radiation, reheat coils, and similar terminal units. Normally open. 3-position models include wiring adapters for ⅜" flex conduit and plenum cable. All models are UL Plenum Rated and C-UL Listed.

No. 5GED2

Honeywell Honeywell Home

Electric Globe Valves

2-Way, Direct Acting—Provide equal percentage characteristics of flow for close control of water, and linear characteristics of flow for close control of steam.

2- and 3-Way, Cartridge—Long stroke allows wider range of control. Soft valve seat provides low leakage rate. Threaded plastic cover with handle for manual operation. Easily installed in areas where space is limited.

2- and 3-Way, Cartridge Cage—Actuator can be removed without draining system. For use with floating actuators, sold separately. No tools required for actuator installation or removal. Service is by replacement of cartridge, not valve body. 2-way bodies can be plumbed in either direction. 3-way bodies can be used in diverting or mixing applications.

Fluid Flow Switches

Johnson Controls

- SPDT
- 24-230V, except No. 35LZ20 is 4-120V
- Max. fluid temperature: 250°F
- Wetted materials: Viton®

For fluid lines carrying ethylene glycol, water, or other nonhazardous liquids.

Standard Flow—For use with 1" or greater pipe size. No. 35LZ20 is a low-energy switch with gold-plated contacts for improved electrical performance in low-voltage, low-current circuits (dry circuits) to switch low-energy resistive loads, such as control signals.

Low Flow—For use with 1" or smaller pipe size.

Type	Min. Flow Rate (gpm)	Max. Flow (gpm)	Max. Pressure (psi)	Switch Encl.	Connec. Size (in.)	Mfr. Model	Item No.

					¾ FNPT x ¾ FNPT	F261MFH-V01C	35LZ16

Air Flow Switch

Johnson Controls

- SPDT
- Max. air velocity: 2000 fpm
- Max. ambient: 104°F

Detects duct air flow (or absence) by velocity of air movement. Features trimmable 1-pc. stainless steel paddle and range-adjusting screw for field adjustment. Gasket included.

Paddle Size	Full Load Amps @ 115/230V	Min. Actuation Velocity Horizontal	Min. Actuation Velocity Vertical	Mfr. Model	Item No.
2⅛" x 6⅞"	16.0/8.0	500 fpm (> 50 sq. in. duct area)	750 fpm (> 50 sq. in. duct area)	F262KDH-01C	35LY69

ASHCROFT
Dwyer®

No. 2AGD4

Air Pressure Controls

Low-Pressure Transducers—Measure static and differential pressure of clean, dry, noncorrosive gases in HVAC ducts and other applications. Accuracy: 0.8% full scale. 4 to 20mA output. LED power status indicator. Detachable terminal block simplifies wiring. NEMA 1 ABS housing has ¼" barbed male fittings. Proof pressure 15 psi, burst pressure 25 psi. RoHS compliant.

Air Pressure Transmitters—Monitor differential pressure and air velocity. Ranges and units are field selectable. Adjustable display damping. 3/16" I.D. tubing connection. CE Certified.

- Operating temp.: 0° to 150°F
- Power supply: 2-wire, 10 to 35VDC
- 4 to 20mA DC signal output

Liquid Level Float Switches

Johnson Controls

A change in the liquid level will open or close an electrical circuit, and allows you to maintain the proper liquid level in a closed tank.

Pressure-Sensing Switches and Probes

PRESSURE-SENSING SWITCHES

- Mount with diaphragm in vertical plane

Sense positive, negative, or differential air pressure. Negative pressure rating same as positive. UL Listed.

HVAC OEM and HVAC General Purpose—For residential, light commercial mid-efficiency furnaces, and direct digital control (DDC) applications. No. 2E462 includes ferrules, one 12" length of ¼" O.D. flexible tubing, and ¼" O.D. tubing nuts.

Gold Contact—For computer environments, direct digital control, or where low-ampere currents are wired.

STATIC AND TOTAL PRESSURE PROBES

Static Pressure—Passive probes sense pressure as air flow aspirates across the probe tip opening.

Total Pressure—Impact probes sense negative or positive pressure, depending on the angle of the probe tip opening.

Performance Ratings

Use MERV ratings to select the right filter

What MERV ratings mean

An air filter's minimum efficiency reporting value (MERV) rating measures how effectively the filter stops dust and other contaminants from passing through the filter and into the air stream. Filters with higher MERV ratings trap small particles more effectively than filters with lower MERV ratings.

MERV Rating 1-4	MERV Rating 5-8	MERV Rating 9-12	MERV Rating 13-16	MERV Rating 17-20
Pollen Dust Mites Sanding Dust Textile/Carpet Fibers	Mold/Spores Dust Lint Cement Dust	Legionella Lead Dust Humidifier Dust Coal Dust Nebulizer Dust	Bacteria Tobacco Smoke Auto Fumes Sneeze Nuclei Insecticide Dust Copier Toner Pet Dander Face Powder	Virus Carriers Carbon Dust Sea Salt Combustion Smoke Radon Progeny Odor Microscopic Allergens
Filters Down To 10.0 Micron Particle Size	**Filters Down To 3.0-10.0 Micron Particle Size**	**Filters Down To 1.0-3.0 Micron Particle Size**	**Filters Down To 0.3-1.0 Micron Particle Size**	**Filters Down To <.30 Micron Particle Size**
Application: • Residential Buildings • Window Air-Conditioning Units	**Application:** • Residential Buildings (better performance) • Commercial Buildings • Industrial Workplaces • Paint Booth Inlets	**Application:** • Residential Buildings (superior performance) • Commercial Buildings (better performance) • Hospital Laboratories	**Application:** • Commercial Buildings (superior performance) • General Surgery Rooms • Hospital Inpatient Care Rooms • Smoking Lounges	**Application:** • Pharmaceutical Manufacturing Facilities • Clean Rooms • Orthopedic Surgery Rooms

★AirHandler®

General Purpose Pleated Air Filters

- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Capture airborne contaminants more effectively than nonpleated air filters since the pleated filter media has more surface area for trapping contaminants than nonpleated media.

Go to **grainger.com/autoreorder** to set up an ordering schedule.

Note: We carry MERV 13 air filters on Grainger.com®.

STANDARD-CAPACITY

Improve air quality and keep resistance within reasonable operating limits.

HIGH-CAPACITY

50% more surface area than standard capacity extends service life by 30% to 50%, providing reduced resistance and lower energy and maintenance costs.

Air Handler®
LEED Green-Building-Compliant Pleated Air Filters

- MERV 13
- Standard capacity, except where noted
- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Meet the air-filtration efficiency criteria required for earning points toward LEED (Leadership in Energy and Environmental Design) Green Building certification. Slim format allows upgrades from medium-efficiency pleated filtration without investing in new equipment.

Air Handler®
High Strength Performance Pleat™ Air Filters

- MERV 8
- High capacity
- Low-resistance synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

Extremely strong and durable under difficult operating conditions, including high-moisture applications. Can hold more dust than MERV 8 general use pleated air filters, so they need to be replaced less often. Manufactured with a heavy-duty, galvanized expanded metal support grid and moisture-resistant adhesive.

High Strength Diamond Pleated Air Filters

- High capacity
- Low-resistance synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

Have an internal wire frame that reinforces the filter to prevent it from blowing out in applications where the HVAC system may place increased pressure on the filter due to high velocities or high moisture.

Note: The filter media color may be white or yellow.

Air Handler®

Antimicrobial Pleated Air Filters

- MERV 8
- High capacity
- Synthetic media
- Moisture-resistant die-cut beverage board frame
- Wire-backed design
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Treated with an antimicrobial agent that prevents mold and mildew from growing on the air filter. Ideal for commercial buildings, healthcare facilities, and locations where moisture is present and mold or mildew may grow on standard filters.

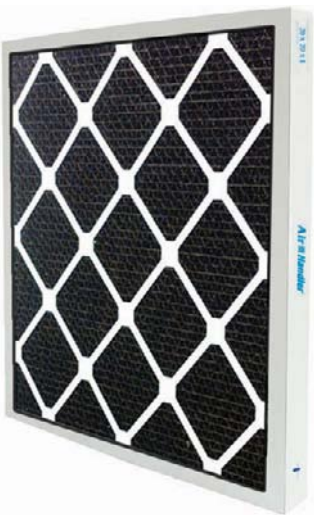
Air Handler®

Odor Removal Panel Air Filters



- Moisture-resistant die-cut beverage board frame
- ASHRAE compliant
- Priced each; shipped in case qty., sold individually in-store only

Activated charcoal absorbs unpleasant odors and other gaseous contaminants in the air stream to improve indoor air quality.

For Nuisance Odors, Pleated, Impregnated Carbon—Ideal for removing nuisance odors such as pet smells, tobacco smoke, food odors, and mustiness from the air.

- Carbon concentration: 20 g/sq. ft.

★AirHandler®
Non-Pleated Panel Air Filters

- Chipboard frame; polyester filters have metal grid on one side
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

Tackifier on upstream side improves particulate capture while polyester filters do not shed fibers. All filters are commonly used in furnace and central air systems in residential and commercial buildings where basic filtration is required.

Washable Electrostatic Air Filters

- MERV 5
- Polypropylene media
- Aluminum frame
- UL Classified

Filters naturally create a static charge as air moves through the filter, and the charge attracts tiny particles such as dust and pet dander. Permanent, fit into existing filter tracks, and have an arrestance rate of 90%.

★AirHandler®
Fan Shroud Air Filters

- MERV 4
- Polyester media

Fit over standard guards on air circulator fans to filter the air before it enters the fan. Also known as circular fan filters, they trap large airborne particles from the air stream to prevent them from building up on the fan blades. Elastic gathering band and hook-and-loop closure.

Air Handler® Ring Panel and Link Air Filters

- MERV 8
- Synthetic media
- UL Classified
- Priced each; shipped in case qty.; sold individually in-store only (except where noted)

Consist of layered polyester filter media with a metal wire that is heat-sealed around the inside edges to hold the media open. The filter media wraps around the wire to ensure a positive seal when the filter is installed so that air doesn't bypass the filter. Unlike standard panel air filters they don't require clips or latches to seal them in place. Suitable for high moisture or high air flow applications and commonly used in commercial buildings, schools, universities, and areas where surface finishing is performed.

Air Handler® Washable Grease Collection Baffle Air Filters

- Self-draining; handles included
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

Metal air filters are washable, reusable, and have a metal frame and metal mesh filter media. They're installed in self-draining style commercial kitchen hoods to trap airborne grease before it reaches the exhaust fan, and to prevent grease from accumulating on the fan and the exterior building surface where the fan vents. Permanent filters balance airflow evenly throughout exhaust hoods in commercial kitchen applications and can be used to replace mesh filters in older hoods.

Air Handler® Washable Mesh Air Filters

- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

General use mesh filters have a metal frame, metal mesh filter media, and prevent large airborne particles such as dust, leaves, and pests from entering and damaging HVAC equipment. They can be vacuumed, sprayed, or run through a dishwasher for cleaning and reused. Optional handles attach to filter. Air filters are suitable for use with Carrier, MicroMetl, Trane, York, and other systems.

Aluminum—Rustproof; constructed of multiple layers of corrugated aluminum wire mesh in a heavy-gauge aluminum U-channel frame.

Galvanized Steel—Constructed of multiple layers of expanded corrugated steel mesh and a galvanized steel frame. Not recommended for outdoor applications.

Air Handler® Washable Range Hood Mesh Air Filters

- Aluminum media and frame
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

These washable and reusable filters install in kitchen range hoods to remove odors and trap grease before it reaches the exhaust fan. This prevents grease from accumulating on the exhaust fan. Suitable for use with microwave range hoods and both ductless and ducted exhaust hoods. Replace OEM filters for popular brands.

Cube Air Filters

- MERV 8
- Synthetic media
- UL Classified
- Priced each; shipped in case qty.; sold individually in-store only

These bag-like filters hold more particles than non-pleated panel and ring panel air filters and have layered synthetic filter media that won't deteriorate or warp in wet or humid conditions. Three-ply cube air filters have three layers of blue/white synthetic filter media that are heat-sealed together and are tacky to the touch. Ideal for replacing older cube-style air filters or basket-type filters in HVAC equipment. Filters are good for low-efficiency air filtration in paint booths, mining sites, and other areas with heavy dust or high humidity.

HVAC Filter Change-Out and Preventative Maintenance Services

Modernize your facility without disrupting your operations by leveraging Grainger's network of qualifed, insured, and licensed service providers.*

Comprehensive services include:

- On-site check in
- Filter change-out
- Update to filter records
- Disposal of used filters

The Grainger Energy Services team serves as your resource to help prolong the life of your heating, ventilation, and air conditioning (HVAC) systems. We serve your facility through our network of qualifed, insured, and licensed service providers. Our providers visually inspect all HVAC equipment, look over electrical and mechanical components for excessive wear or damage, change filters, and check belts and start-up to help ensure your HVAC units are functioning properly and effciently. If there are any problems with your HVAC unit, our providers are skilled in tightening, lubricating, cleaning, draining, adjusting, testing, and measuring. In each case, Grainger will supply high-quality products to help ensure the project is completed on time and on budget.

If you would like more information, or to see if your facility qualifies for an on-site evaluation, call us at 866-597-1330 or contact your Grainger Rep to learn how you can benefit from these preventative maintenance services.

*Provided by third-party service providers. Subject to customer eligibility and agreements.

Pocket Air Filters

- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Pocket air filters, also called bag filters, have a bag-like filter element that is stitched into pockets. They trap more particles than nonpleated panel filters and need to be changed less often. Pocket dividers with reinforced media-support backing add to overall strength. Filters are best suited for applications where air is constantly flowing through the filter since they may deposit some captured material back into the air stream when they deflate. 13/16", 24-ga. galvanized steel frame. Often installed in HVAC systems in auto shops, data centers, food and beverage plants, industrial sites, and schools.

No. 6B626

SYNTHETIC MEDIA

Does not shed fibers and suitable for high-humidity applications.

Air Handler®

Minipleat Air Filters with Gasket

No. 499J13

- Synthetic media
- Rugged plastic frame
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only

Gaskets provide sealing to minimize air bypass and a tightly pleated filter media that traps particles with high efficiency. Filters have a rigid frame that can withstand difficult operating conditions such as variable air volume, turbulent airflow, and high humidity. They are commonly installed in HVAC systems in offices, hospitals, museums, electronics manufacturing, and similar applications.

Rigid Cell Air Filters

Air Handler®

- Ultrafine fiberglass or synthetic media, nylon-reinforced on the air-exit side
- Reinforced galvanized-steel frame
- Replace conventional pocket and rigid filters
- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

The filters' rigid frame can withstand fluctuations in airflow, making them ideal for variable-volume HVAC systems. Metal grid and media stabilizers maintain pleat configuration. Filters are for use in commercial buildings, schools, hospitals, arenas, and industrial installations.

★AirHandler® V-Bank Air Filters

No. 4PY71

No. 11Z806

- UL Classified
- Plastic frame
- Operate in 100% relative humidity
- Recommended final resistance: 1.5 WC
- For variable air volume systems
- Fit all commonly used 12"D filter frames and housings; 13/16" header

These filters trap particles with high efficiency and can hold more dust than standard minipleat, cartridge, and rigid cell air filters. The filter installation position, service side, and course of air flow can be in any direction. Filters with 85% Filter Efficiency are used for telecommunication industry ventilation.

2 Vs—Provide efficient filtration, are lightweight and easy to transport.

- Replace pocket and rigid filters
- For normal, hostile, and high humidity environments

3 Vs and 4 Vs, Hospital Grade—Can be used where HEPA filter performance is desired but system limitations do not permit use of high-resistance, low-volume HEPA filters.

- More than 8 times as efficient as a 95% ASHRAE filter

4 Vs, Heavy-Duty Plastic Frame—Additional urethane sealant provides greater strength for high-velocity and high-turbulence applications.

★AirHandler® Odor Removal Box Air Filters

No. 19RR55

No. 2GGV7

- ASTM compliant

Have a rigid frame and contain active carbon charcoal that absorbs unpleasant odors and other gaseous contaminants in the air stream to improve indoor air quality.

Rigid Cell—Can withstand fluctuations in airflow, making these filters ideal for variable-volume HVAC systems. These vapor phase adsorber filters remove molecular contaminants such as hydrocarbons, formaldehyde, ammonia, acid gases, VOCs (volatile organic compounds, such as paint and cleaning chemical fumes), and ozone from the air stream at low concentration levels. Used to improve indoor air quality in commercial or industrial applications such as museums, archive storage facilities, and semiconductor fabrication facilities.

- Metal frame
- Carbon concentration: 46 g/sq.ft.

V-Bank, 4 Vs—These active carbon charcoal adsorber filters are installed in HVAC systems to remove gaseous contaminants such as sulfur oxide, nitrous oxide, ammonia, amines, diesel fumes, aldehydes, acid gases, VOCs (volatile organic compounds, such as paint and cleaning chemical fumes), and animal odors from the air stream. Used to improve indoor air quality in airports, blueprint facilities, food processing plants, loading docks, museums, office buildings, and research facilities.

- Plastic frame
- Carbon concentration: 0.49 g/mL

★AirHandler® V-Bank Air Filter Gloves

No. 2JTL5

- MERV 2, UL Classified
- 100% polyester media
- Recommended final resistance: 1.5" WC
- Double-stitched corners
- Priced each; shipped in case qty., sold individually in-store only

These filter gloves are a bag-like layer of filter material that slips onto the back of a compatible V-bank filter. Depending on how the filter is mounted, the V-bank glove can serve as a pre-filter or as a final filter.

★AirHandler® Air Filter Gasketing

Chemical-resistant gasketing with adhesive backing creates a compression seal between the filter media and the housing or frame it sits in. This helps prevent dirty air from escaping through the space between the filter media and the frame or housing. Gasketing is commonly used with box air filters.

Actual Width	Actual Thickness	Overall Length	Gasket Color	Item No.

13/16"	1/4"	50 ft.	Black	6C524

High Efficiency Particulate Air (HEPA) Filters

HEPA air filters are installed in HVAC systems to remove the maximum amount of contaminants from the air stream for applications that require very clean air. This maximizes indoor air quality and keeps the contaminants from building up in the equipment and damaging it.

They provide more effective filtration than other styles of air filters and have a box construction. Commonly used in areas that require very high levels of contamination control, such as clean rooms, hospitals, pharmaceutical facilities, data centers, laboratories, and food processing plants.

Air Handler®

HEPA Air Filters

- Microglass media
- UL Classified

Dispersed Oil Particulates (DOP) HEPA-Grade, 95.00% Efficient—Capture airborne contaminants more efficiently than standard non-HEPA air filters but are less efficient than other types of HEPA air filters. Urethane sealant provides a positive seal on all four sides of the metal frame to help eliminate potential air leaks. Filters are suitable for applications where HEPA-filtered air is not required. Using the DOP test method, these filters are rated as removing particles as small as 0.30 microns with 95% efficiency.
- Hospital grade

Standard HEPA—Remove between 99.97% and 99.99% of particles as small as 0.30 microns from the air stream. Urethane sealant provides a positive seal on all four sides of the metal frame to help eliminate potential air leaks. Filters are commonly used in hospitals, operating rooms, patient isolation rooms, pharmaceutical processing facilities, and similar locations that must meet strict air cleanliness standards. The air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Hospital grade

HEPA Panel, 99.99% Efficient—For use in pressurized open plenum T-Bar grid systems to remove 99.99% of particles as small as 0.30 microns from the air stream. They are commonly used in pharmaceutical processing facilities, patient isolation rooms, operating rooms, hospitals, and other similar locations that must meet strict air cleanliness standards. Air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Low-pressure drop

HEPA Ducted Terminal Modules, 99.99% Efficient—Designed for use in ducted supply HVAC installations with T-bar grid ceilings and remove a minimum of 99.99% of particles as small as 0.30 microns from the air stream. They are commonly used in hospitals, operating rooms, patient isolation rooms, surgery recovery rooms, biomedical facilities, pharmaceutical processing plants, laboratories, and other locations that must meet strict air cleanliness standards. Air filters are manufactured, tested, certified, and labeled in accordance with current HEPA filter standards.
- Low-pressure drop

Air Handler®

HEPA Air Filter Change-Out Bags

- UL Classified

Fit around used HEPA and ULPA filters to prevent captured contaminants from escaping while the filters are being stored for disposal. These bags have access holes that can be used to position the bag over the filter and have seals that prevent dust and contaminants captured in the spent filter from escaping. Bags are commonly used to contain spent filters in hospitals, patient isolation rooms, and laboratories.

Air Handler®

HEPA Air Filter Holding Frames

Hold compatible HEPA filters securely in place in an HVAC system and allow the filters to seal with the mounting surface to help prevent dirty air from bypassing the filter. Holding frames and compatible HEPA filters remove the maximum amount of contaminants from the air stream for applications that require very clean air.

Holding Frames—For OEM or field assembly of built-up HEPA/ULPA filter banks.

Surelock B HEPA Housings—All-welded, side-access housings can accept most gasket-seal HEPA filters. For use in ducts on the downstream side of the air handling unit.

Air Handler® Air Filter Rolls

No. 2W186

- UL Classified

General use air filter rolls consist of a long length of filter media that can be cut to size. They are most commonly used as pre-filters to extend the life of more expensive final filters.

Polyester, Blue/White—For use where fiberglass filters are not acceptable or fiber break-off is a concern.

Polyester, Orange/White—Alternative for MERV 8 pleated filters and have a nonmigrating, heavy, dry tackifier on the downstream (orange) side.

Fiberglass, Blue/White—Bulk rolls replace hammock-type filters in furnaces and air conditioners. Progressively denser scrim-backed media (air entry to air exit).

Hog Hair, Blue—Replace odd-size furnace filters. Stiff media fibers for rigidity and durability, and self-supporting with no frame required.

Foam, Black—Can replace disposable filters as a prefilter for higher-efficiency electronic or media cartridge filters. Wash or vacuum to clean.

Air Handler® Air Filter Rolls for Automatic Roll Machines

No. 6B685

- UL Classified
- Cores are not interchangeable
- Type AE: American Air Filter units
- Type AE/CB: American Air Filter and Cambridge units
- Type C: Continental Air Filter units

These ready-to-install air filter rolls consist of a long length of filter media on a solid core that can be installed on automatic filter roll machines. When a filter change is needed, the machine automatically advances the correct amount of filter media to replace the existing media. These rolls are most commonly used as pre-filters to extend the life of more expensive final filters.

Holding Clip

Air Handler® Air Filter Pad Holding Frames and Clips

Air filter pad holding frames provide support for air filter pads and allow you to just change the filter media in the air filter frame instead of throwing away the entire air filter. Permanent, reusable frames are constructed around a 24-ga. galvanized steel frame. The downstream side is 1" x 1", 16-ga. galvanized welded wire.

Air Handler® Air Filter Pads

No. 6B735

- UL Classified
- Priced each; shipped in case qty., sold individually in-store only (except where noted)

Pads consist of nonpleated filter media that has been cut to a particular size and can be cut down to a smaller size if needed. Commonly used to replace dirty air conditioner filter pads.

Polyester, Blue/White—Offers higher arrestance and dust-holding than most fiberglass filters; won't shed fibers into the air stream.

Fiberglass, Blue/White—For heavy industrial and oily applications.

Air Handler®

Paint Collection Air Filter Pads and Rolls

- Can be cut to size
- Nos. 2EKK1 and 2EKK2 are priced each; shipped in case qty. of 30, sold individually in-store only

Fiberglass Pads, Nos. 2W001 and 2W002—2¼"-thick media is progressively layered (air- entering to air-leaving) to enhance filter efficiency and service life. Loosely woven construction allows paint to load evenly without face loading.

Paper Pads, Nos. 6W747 and 6W748—6 layers of kraft media, slit and expanded into a mesh with baffle-like surfaces, are progressively layered to collect particulates from larger overspray to smaller droplets.

Paper Pads, Nos. 6W749 and 6W750—The first 3 layers (of a total of 8) employ extremely large baffle openings for maximum particulate-holding capacity. Ideal for use with heavier tacky coatings, conventional coatings, and in situations requiring extended service life.

Paper Pad, No. 6W751—5 layers of expanded kraft media with multistage baffle openings and 1 synthetic layer provide high-efficiency collection and straining, especially with high solids and waterborne coatings.

Air Filter Rolls—Designed for use in all spray booth overspray applications and in high-production situations.

No. 6W747

No. 6B835

Fume and Dust Collectors

EXTRACT-ALL

- Filters not included with all models; select primary filter pkg. based on application needs

Multistage filtration removes smoke, dust, odors, solvent fumes, and lab fumes in a variety of small- to medium-size industrial applications. Housing has durable polyurethane powder-coated finish. Optional acrylic capture hoods (sold separately) provide backdraft source capture. Additional replacement filters are available; search Grainger.com® for the Grainger Item No. and click Optional Accessories.

For additional fume and dust collectors, see pages 2408 and 2363.

- Filters included
- 120V, 60 Hz

Replacement Filters/Bulbs—Prefilters remove large particles, HEPA filters remove particulates, and activated carbon filters remove odors. UV lights neutralize bacteria, viruses, and other microorganisms. Photocatalytic oxidation (PCO) filters employ UV lights plus titanium dioxide (TiO™) media to destroy bacteria, molds, and viruses.

Dayton

FRIEDRICH

Office/Residential Dehumidifiers

- Automatic defrost
- 2-speed fan

ENERGY STAR qualified.

Dayton®—Compact residential dehumidifiers feature a built-in water level indicator, removable slide-out filter, and full-bucket indicator light. Also include garden hose hook-up adapter.

Friedrich—Versatile and portable dehumidifier features top-mount digital touch controls, non-louvered front panel for a clean, stylish appearance, and built-in casters for mobility. It has 3 drainage options including removable condensate bucket with carry handle, continuous gravity drainage hook up, and built-in drain pump that can pump condensation vertically or horizontally up to 15 ft. Also features precise adjustable humidity control from 30% to 90%, auto restart, and a 24-hr. timer.

DRI-EAZ

fantech

Jobsite/Restoration Dehumidifiers

No. 39C366

For use in conditions of flooding and areas of excess moisture. Rotomolded housing. Compact model easily fits into a crawl space, is portable and stackable making it ideal for restorative drying applications. Low-grain models are more energy efficient. Air is precooled before reaching evaporator coil for faster condensation, resulting in drier air.

Dri-Eaz—Designed for optimal performance and feature a multifunction 4-language digital control panel, condensate pump, 40-ft. drain hose, 25-ft. power cord, and lifetime manufacturer's warranty on housing. Nos. 30KE39, 39C366, and 6UFY3 have built-in humidistat. ETL Listed to UL and CSA standards.

- Ambient temp. range: 33° to 100°F (No. 30KE39 is 45° to 100°F; No. 39C365 is 33° to 125°F)

Fantech—Models have an automatic defrost with mode indication and on-demand condensate pump purge with 30-ft. drain hose. Units have dual handles, 11" wheels, and external hose storage. CSA Certified for U.S. and Canada.

- Ambient temp. range: 40° to 95°F

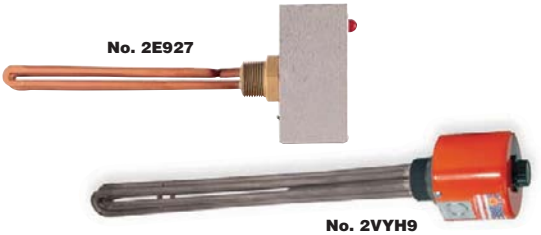
No. 4TCR6



Cartridge Immersion Heaters

TEMPCO

Provide greater heat dissipation in a select area than a tubular immersion heater. For use in heating water and other liquids in platen, plastic mold, die heating, liquid immersion, and air heating applications.

Details on page A1.

Screw Plug Immersion Heaters

- NEMA 1 housing, except Nos. 4E274 to 4E279

WITH THERMOSTAT

- Control range: copper, 60° to 250°F; steel (Vulcan models), 100° to 550°F; steel (Tempco models), 60° to 250°F

WITHOUT THERMOSTAT

Require external flow switch, low-liquid cutoff switch, over-temp. switch, or other safety device depending on the type of system.

AUTOMATIC RESET

- Control range: 110° to 190°F

Drum Immersion and Bottom-Outlet Heaters

Drum Immersion—Include flange for mounting in 2" bung opening.

Over-the-Side—Feature sludge legs to elevate element off bottom of open container. 36"H riser, except No. 3HT66 is 54"H.

Bottom-Outlet—4" metal housing protects heater termination. Ring clamp mounting design with a bronze flange for mounting in a 2⁷⁄₁₆"-dia. hole.

Sanitizing Sink/Tank Immersion—Adjustable stainless steel mounting bracket and 6-ft. cord set with polarized plug included.

Screw Plug

TEMPCO

Circulation Heaters and Circulation Booster Heaters

- NEMA 1 housing
- Flanged models have high temp. stainless steel sheath material

Self-contained thermostatically controlled heating units consist of a flanged or screw-plug immersion heater mounted into a tank assembly. Replacement Heater Elements with Gasket can be used as stand-alone heaters.

Vulcan

Industrial Heaters and Elements

Low-Profile Enclosure Heaters—1⅜"H x 2"W finned strip heaters with mounting brackets. 304 stainless steel. UL Recognized.

Finned Tubular Heating Elements—1010 carbon steel sheath with high-temperature, corrosion-resistant finish. Sheath temperature: 800°F max. 2" center-to-center mounting.

- ¾-16 threaded mounting fittings with hardware
- 8-32 screw and nut terminals

High- and Low-Watt-Density Cartridge Heaters

HIGH-WATT-DENSITY

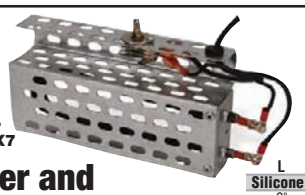
Tempco
- 321 stainless steel sheath tolerates high temps.
- Sheath dia. tolerance: ±0.002"

Vulcan, Thunderbolt™— Operate up to 5 times the watt density of standard cartridge heaters.
- Corrosion-resistant alloy sheath
- Sheath dia. tolerance: +0.000" to -0.004"

LOW-WATT-DENSITY
- Corrosion-resistant 304 stainless steel sheath

Excellent for insertion into dies, molds, and platens.

For more cartridge heaters, go to Grainger.com®.



No. 4NKH1

Tubular
- Corrosion-resistant housing
- 3⅝"H x 1⁹⁄₁₆"W x 8⅜"L
- Mount via perforated holes in housing

Remote Thermostats—Can be placed anywhere in the enclosure and secured with pressure-sensitive adhesive.
- Silicone rubber base and enclosure
- 10A/250VAC, 15A/120VAC
- 48" leads

Silicone Rubber and Tubular Enclosure Heaters

Protect enclosures against condensation, humidity, and freezing. Mount heater vertically at the bottom of the enclosure.

Silicone Rubber
- Silicone rubber vulcanized to aluminum mounting plate
- ½"H with mounting flange
- 48" leads
- Mounting holes O.C.: oblong 5⁄32" x 14"

Pre-Assembled Electric Heating Cables

- Self-regulating
- For indoor/outdoor use

Ready for installation and don't require cutting. Cables have either prestripped wires for hardwired connections or a NEMA plug. Used to protect pipes, roofs, and gutter systems against damage from freezing or ice buildup.

Portable Radiator-Style Electric Office Heaters

Heating element is contained in an oil-filled radiator to provide consistent warmth and to give off residual heat even after the unit is shut off. Heaters use convection-style heating and don't have moving parts, so they operate quietly. Units have tip-over switches and will shut off automatically if knocked over.

Portable Electric Baseboard Heaters

- 120VAC

Units plug into outlets instead of being hardwired to provide warm air wherever it's needed. They use either a finned metal heating element or an oil-filled one and work by convection for spot or supplemental heat. They position along a wall's baseboard in small areas like offices or bedrooms. Integral thermostat included.

Portable Salamander Electric Jobsite & Garage Heaters

Use fan-forced air to provide clean, odor-free tempered heat, which raises the area's temperature by a specified amount. Units heat enclosed spaces. Automatic overheat protection prevents damage to the unit. Units also have an option to be used as a fan. Built-in thermostat included.

Wall-Mounting Brackets—Convert salamander heaters for wall- or ceiling-mount with horizontal air flow. Bottom of heater must be at least 6 ft. from the floor.

Field-Installed Cable Kits—Leads are terminated with #10 ring terminals. Cord grip (connector) is included.

Portable Infrared Radiant Electric Jobsite & Garage Heaters

Efficiently and quietly warm people and objects without having to bring up the ambient air temperature. Provide spot heating to enclosed and semiprotected areas. Also used to cure a variety of finishes with a lower chance of blistering or overheating than other types of heaters.

Note: Not for use in hazardous or chemical-laden atmospheres, or unprotected wet locations. Heaters should be used outdoors temporarily only.

Multiple heaters may be required to achieve required watts for desired coverage.

Watts	Non-Protected Heated Area (sq. ft.) Below 35°F	Non-Protected Heated Area (sq. ft.) Above 35°F	Semi-Protected Heated Area (sq. ft.) Below 35°F	Semi-Protected Heated Area (sq. ft.) Above 35°F

Under-Floor Electric Heating Systems

Provide concentrated warmth at ground level. Systems consist of mats with built-in heating coils that are positioned between the subfloor and finished floor. Easy to install and used in renovations or new construction. Compatible with most subfloors. Remote-mounted thermostat required (sold separately).

For Ceramic Tile, Marble, Porcelain, Stone, Carpet, Vinyl Tile—Can be installed under carpet, vinyl, laminate, and glued-down floors with self-leveling cement. Include factory-attached 10-ft. lead wire.

For Laminate, Wood—Suitable for floating and glue-down laminate, wood, and engineered wood floors; no cement required. Include 20-ft. lead wire.

Kickspace Electric Heaters

No. 2YV10

- Black grille color

Recess in under-cabinet spaces and provide supplemental heat where space is limited, such as kitchens, bathrooms, and checkout counters. They wire into an opening at the base of a cabinet. Can be controlled with a required surface-mount thermostat or a wall thermostat (sold separately).

Drop-In Electric Floor Heater

No. 2YU87

- Gray grille color

Installs in an opening in the floor and provides supplemental heat in drafty areas with limited space. Lowers into the floor and mounts either parallel or perpendicular to the floor joists. Provides floor-level warmth without requiring floor renovation. Can be controlled with a required surface-mount thermostat or a wall thermostat (sold separately).

Standard Electric Baseboard Heaters

- Overheat protection

Work by convection and have a heating element encased in a metal sheath surrounded by aluminum fins to transfer heat. Install along baseboards to warm rooms and small spaces in buildings such as multifamily housing or offices. Thermostat required (sold separately).

Commercial Grade, Conventional Top—Feature multiple knockouts at each end, wiring pigtails, built-in cable clamps, and installation mounting guides.

Commercial Grade, Slope Top—45° slope-top discourages use of heater as a shelf or step. Mount directly to the floor. Carpeting can be brought up to the front of the unit.

Residential Grade, Conventional Top—Multiple knockouts at each end. Includes wiring pigtails.

Oil-Filled Electric Baseboard Heaters

- White housing
- Floor mount
- Overheat protection

Oil-filled heating element minimizes temperature swings and provides residual heat even after the unit is shut off. Units use convection heating. Install along baseboards to warm rooms and small spaces in buildings such as multifamily housing or offices. Hardwired and require a thermostat to control heat settings (sold separately).

- Tamper-resistant
- Bronze grille color

Occupancy sensor turns up the thermostat to the desired temperature when it detects movement. If no movement is detected, it will set the thermostat back to a preset level to save energy costs. These fan-forced heaters are used in residential and small commercial spaces. Units can be recess- or surface-mounted.

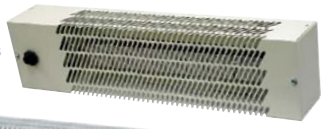
Surface-Mount Electric Ceiling Heaters

Position out of the way to free up limited wall and floor space. Units use fan-forced air to provide spot and supplemental heating to spaces like offices, conference rooms, lobbies, and bathrooms. Automatic thermal cutout shuts off the heater if it overheats and turns it back on when the temperature returns to normal. Thermostat is required.



Surface-Mount Electric Wall Heaters

QMARK Dayton

- Mechanical selector dial

Position near the floor, allowing heat to rise upward to warm the area. Units use convection heating to quietly provide spot and supplemental heating to small spaces.

Surface-Mount Electric Cabinet Wall Heaters

QMARK

- Field convertible with voltage
- 1 or 3 phase

Units are larger than other wall heaters and have a greater capacity to produce warm air in a shorter amount of time. Provide fan-forced heating to spaces like school hallways, churches, and transportation terminals. Can be universally mounted or recess out of the way with required trim kit. Built-in thermostat can be removed and converted to wall-mount.

Recessed & Drop-In Panel Fan-Forced Electric Ceiling Heaters

Can be recess-mounted or installed in 2 ft. x 2 ft. drop ceilings. Can also be mounted in permanent ceiling applications with a required trim ring. Units use fan-forced air to provide spot heating in small areas with limited floor and wall space. Thermostat required.

No. 54UD14

No. 54UD18

Dayton QMARK

Drop-In Panel Radiant Electric Ceiling Heaters

Install in 2 ft. x 2 ft. or 2 ft. x 4 ft. drop ceilings. Include built-in T-bar suspension clips for mounting. Can also be recess- or surface-mounted on hard ceiling surfaces with a required mounting frame. Units use radiant heating to quietly spot heat small spaces. Remote wall-mounted line voltage thermostat required.

Dayton Markel Products Company

General Purpose Electric Plenum Heaters

- Fan-forced
- Disconnect switch
- Mechanical Selector Dial, Thermostat

Can be installed for free-air discharge or with a duct system to supplement central heating in hard-to-access or concealed areas, such as between a finished and drop ceiling or a plenum space. Can be rotated on their axis, but must be suspended horizontally and independently supported. Cannot be mounted vertically. Mounting bracket included.

Dayton

Freeze Protection Electric Plenum Heater

- Thermostat range: 40°F to 90°F

Has a set of normally open (NO) contacts that can send a signal to an optional alarm device that activates if the heater cycles off on its over-temperature safety control. It notifies users before freezing occurs. Unit heats hard-to-access or concealed areas like plenum spaces. Ceiling mounted using included bracket or threaded rod mounting.

Suspended Electric Wall & Ceiling Unit Heaters

Suspend from a bracket or threaded rod for use in downflow or horizontal applications and to save limited floorspace. Units use fan-forced air to provide primary or supplementary heating in large or exposed areas like factories, warehouses, and stock rooms. Find more Electric Wall & Ceiling Heaters and accessories on Grainger.com®.

Washdown Electric Wall & Ceiling Unit Heaters

- 480VAC
- 3-phase
- Mechanical selector dial

Provide warmth where equipment frequently needs to be washed or hosed off, like wastewater treatment plants, coal handling areas, food processing plants, and car washes. Corrosion-resistant housing and enclosed internal parts prevent damage. May be mounted on walls or ceilings with a mounting bracket. Units use a forced-air heating system.

Markel®—Models feature a disconnect switch, reset limit switch, aiming handle, pilot light, and NEMA 4X control panel.

QMark®—Models feature an automatic temperature reset switch, pilot light, and mode selector switch.

Hazardous-Location Suspended Electric Wall & Ceiling Unit Heaters

- 480V
- 3-phase
- 24V contactor

Fan-forced heaters that suspend from the wall or ceiling and can be mounted horizontally with an optional bracket. Units take up less room than cabinet heaters. Used in hazardous industrial environments like petroleum chemical treatment and storage facilities. Wall-mount thermostat required.

Note: Required remote thermostat or other control sold separately; see page 3028.

Markel®—Built-in manual reset capillary type thermal limit.

QMark®—Units feature automatic reset thermal limit and disconnect switch.
